Why should he lie about it? Twist answered a question; he did not
advocate anything illegal. In fact, he stated clearly that they are
illegal for transmitting on CB.

Another example of your intelligence deficit?

Newsgroup: rec.radio.cb
Date: 2003-07-01 02:09:44 UTC
From: DAN454@OPTONLINE.NET
Message-ID: <53686337.0306301809.3cbf8880@posting.google.com>
Source record: 161439

Hi,
I need information on how to set clarifier coarse adjustment,so when in the 12:00 o'clock position it is on center frequency.

I have all the test equipment required for transmitter alignment but not sure what VR adjust pot will bring the transmit to center frequency.

I tried adjusting VR 21 transmit offset,but was unable to get it to center frequency.

Best regards,
Dan.

Maybe you should actually read the Google archive. I made no such
accusation; Dave Rickets said he was an investor.

And I didn't "start" anything last year; I responded to other posts
and stated my opinion which, by the way, hasn't changed.

But when you are brain dead I guess facts don't matter. TROLL!

I was just wondering if somebody could clearify the following:

Freebands
Are they on the AM side or the FM side of a Super Star 3900 once it has been converted to 11 meters? That was what I was told when I bought the radio.
Does the FM selection dial on a Super Star still work if you use it, or does it gets disabled when the radio is converted?
Is the 28.000 to 29.700 rage of 10m ham radio, only on AM or FM? If AM, then a 10 m radio can access cb bands without having to convert anything, would it?
Also, are there any amplifiers for a GMRS radio which is mounted on a vehicle?

small to admit it."

_
Gee, Frankie,,,didn't know you were so overtly concerned,,,,he can
ascertain your claim,,,he merely has to post from that direct access
again.,

>He did.

Sure he did,,,,in May,,that was the last time, Since his disappearance,
he has yet another accesss site.

_
,,you mentioned "ISP".

>...yeah? So?

Why are you bringing ISP's into this equation?

_
Your imagined battle to which you refer
this constant "losing" appears to have resulted in each and every one of
the voobs named faves losing posing accesses. Strange coincidences from
the aliens and their signals, eh, Frankie? Think I'll go back to
"losing" more often. It's funny at times and at others, mildly amusing.

>Well, I'm certainly laughing at the fact that you

>have been proven wrong yet again!

But he hasn't posted using the other access since May,,,how do you
figure that proves anything?,,,,But let's assume he can and will post
from there again,,,,,it nullifies his post I held on to where he claims
"I have always accessed the group in the same manner and have no reason
to do otherwise",,,,we can also fish out his post in the same thread
where I illustrated he accessed the group in several different manners,
then turned around and claimed he doesn't know why his ISP routes his

posts to several other accesses..either way it makes him a liar,,thanks for pointing such things out, Frankie mah boy!

"I do not get upset about any CB law being
broken."...Frank Gilliland
(Sparky@cet.com)

>I don't.

Hahha...sure you do Frankie,,you have a plethora of liquid-courage filled posts raving about the inhumanity, lawlessness, and "irresponsibility" of illegal cb operators. You have used the word "anti" and the made up word "keyclown" too many times for anyone to believe you simply "do not care"......you have defended the erratic and attacking behaviors of n8, Lelnad, wa3moj, and the other radio scum while calling others names simply for expressing their views..most recently, your self-example is your claim that you refuse to assist one with certain questions as you're in a cb room and the questions pertain to ampifiers and hammie radio,,,,,but if you didn' "care" like you attempt to ply when you're under the influence, there would be no issue,,,,LOL,,,,see, Frankie,,you really aren't sure of anything...just keep tossing the whoppers out there,,it makes for great drama....oh, along with your unquenchable thirst for hate..you also claimed ilegal cb was your "moral" duty to "fight" against in the same post,,,,,,,,you're really way in dep with the self-contradictions, Frankistein.

> Do you need the reason explained to you a

>fourth time?

Your explanations contradict your other posts.
In one post you claim such things do not bother you, yet in another, you attempt to justify your anger, attacks, and erratic behavior by blaming it on cb and claiming it's somehow YOUR moral obligation and duty to do something about illegal cb....have you always exerted so much impotent energy on that of which you do not care about? Speaks volumes for your well-being and mental status..actually, it merely illustrates what a habitual and pathological liar you are, Frank.

25. Rohn tower stuff - can deliver to wilkes barre PA hamfest

Newsgroup: rec.radio.cb
Date: 2003-07-01 14:19:19 UTC
From: jimmoci@aol.com
Message-ID: <20030701101919.02065.00001540@mb-m07.aol.com>
Source record: 161559

All rohn stuff is new, never installed. Some was stored outside. galvanizing may be a little dull, but none of it was ever used.

25AG4 flat top set up to be used with thrust bearing $75

Tilt over tower base section, gets set in when you pour your concrete. $75

ROHN peaked or flat roof mount- $40

ROHN drive rods and base- great for field day and temporary set-ups. $40

BPC25G flat mount for concrete pad. $40

Paypal and money orders ok, pick up only near Phila., PA on the large stuff. Small bases can be shipped fed-ex ground.

Will be @ wilkes barre hamfest with a few used rohn parts also. Mostly takedown stuff still in good shape.
Thanks!
Jim

Freeband usage is single sideband. You have a toy radio. AM is Amplitude Modulation, FM is Frequency Modulation. CB is from 26.965 to 27.405. Below that is government. Above 28 MHz is the 10 meter amateur band. Use below channel 1 is not recommended, and most activity from 27.365 and up is SSB.

> Also, are there any amplifiers for a GMRS radio which is mounted on a
> vehicle?

RF gets really nasty as you go higher in frequency. Height does better then power on the higher frequencies.

27. Re: Serious Question?!?!?

Newsgroup: rec.radio.cb

Message-ID: <bdsb92$2rp$1@woodrow.ucdavis.edu>
Source record: 161561

: Freebands

A description used to describe the frequencies above and below the 26.965 (channel 1) to 27.405 (channel 40) CB band.

Most often, above channel 40 (27.405) is in use by unlicensed operators. By generic understanding, people use the 27.405 to 28.000 MHz which is the start of the Amateur 10 meter ham band. Most of the above channel 40 work is SSB, although there appears to be no standard for Upper or Lower Sideband. Using ham convention, most SSB activity above 40 meters (7.2Mhz) is upper side band.

Below channel 1 (26.965Mhz) down to.... what-ever is often used for freeband (unlicensed) AM operation.

By convention, FM is not often used a lot in freeband (nor regular CB) operation. Although you do hear it in both places. It's a lot wider signal than SSB. It also brings attention to unlicensed operation a lot faster.

For the most part, your radio doesn't care what frequency its on for the various modes... AM, FM and SSB. Some HF Ham radios auto default select modes at certain frequencies, but you can simply change the mode with a button push.

Hams use CW (code) at the lower portion of the band 28.000 up to 28.3..? I forgot, but it's in the band plan at the ARRL web site. SSB is available from the 28.3..? and higher locations. Some of the higher 29Mhz stuff is set aside for special modes and types of operation. Around and above 29.500, FM is allowed... there are repeater pairs set 100Khz starting at 29.520/29.620, 29.540,29.640, 29.560/29.660... etc, you get the idea. Above 29.7 are more business, military and commercial allocations, mostly running FM.

AM operation on 10 meter amateur is allowed in the same locations as SSB, as SSB is considered a form of AM. FM is limited above 29.5 (or something like that). CW is supposed to be allowed at any place within the band and is often used as a legal identifier in special modes.

*****

About GMRS

Normally, the FRS radios don't allow an external antenna connection, so you can't get the signal into an amplifier.

If you need more GMRS power, you can buy and use proper amplifiers for mobile operation. Or just buy a higher powered radio. For the most part, I

believe GMRS mobile operation is limited to 25 to 50 watts for many licenses in portable operation. You can of course, search around for repeaters, contact the owners of said and ask if you can subscribe or use their machines.

Chow for now...

hope they told you this stuff too.....

Federal Communications Commission (FCC)
Part 95 - Subpart D - Rules for CB Service
Citizens Band (CB) Radio Service

RULE 25 - Modifications to Transmitters {A} You must not make or have any one else make any internal modification to your CB transmitter.{B} Internal modification does NOT include:
[1] Repair, or servicing of a CB station transmitter; or
[2] Changing plug-in modules which were type-accepted as part of your CB transmitter

{C} You must not operate a CB transmitter which has been modified by anyone in any way, including modification to operate on unauthorized frequencies or with illegal power.

RULE 21 - Penalties may not be current penalty information. {A} If the FCC finds that you have WILLFULLY or REPEATEDLY violated the Communications Act or FCC Rules, you may have to pay as much as $2,000 for each violation, up to a total of $5,000.

{B} If the FCC finds that you have violated any section of the Communications Act or FCC Rules, you may be ordered to stop whatever action caused the violation.
{C} If a federal court finds that you have WILLFULLY and KNOWINGLY violated any FCC Rule, you may be fined up to $500 for each day you committed the violation.
{D} If a federal court finds that you have WILLFULLY and KNOWINGLY violated any provision of the Communications Act, you may be fined up to $10,000 or may be imprisoned for one year, or both.

Which "direct access" do you mean? He posted from 209.120.201.77 (Yipes) on May
12 (Message-ID: <3EBF8064.30BA@worldlynx.net) and from 207.103.222.111
(Voicenet) a day later (Message-ID: <3EC0D2BA.5C8C@worldlynx.net), which means
that he has access through both services. And you probably didn't notice that
the Voicenet IP is fixed while the Yipes IP is dynamically allocated
(209.120.xxx.xxx). IOW, his Voicenet access is probably DSL or cable, but he can
access his account using dialup through Yikes. So Voicenet is probably the
intermediate provider for Yikes, which seems to be consistent with the fact that
the headers from both posts were identical with the exception of the IP numbers.
It's also possible that one service reroutes to the other when the lines get
jammed. There are other possibilities; Regardless, his email addy hasn't changed
and neither have the format of his headers, both of which are the best
indicators that he is still using the same ISP as before, and hasn't been tossed
by you or anyone else for ISP violations.

>_
>,,you mentioned "ISP".

>them up,,,you never disappoint.

What "other 3 'jobs'"? Do you mean my job as Glenn Sparks, or my career as
Leland Scott, or perhaps ....oh, hey, I forgot that you think I'm still active
USMC, too. Yeah, that's a lot of jobs to hold down, don'tcha think?

>_
>"I have admitted to lying in this

>newsgroup, and on more than one occasion."......Frank Gilliland
><sparky@NOSPAMaimcomm.net>
>
>>I have, and I admitted it, "Like a man!"
>
>
>
>Onec a liar always a liar.,

Brilliant logic, Twist. Let's see what happens to your brain when confronted
with this little classic paradox: Everything I say is a lie.

>,besides,,you had no choice,,you were forced
>to admit your lies, as they were conveniently illustrated for all to
>see, otherwise, you'd still be self-contradicting yourself whenever the
>power of twist moves you......

You have no choice but to bury your lies in more lies. Your megalomania won't
let you do anything else.

>>Any more stupid questions, Twist?
>
>
>They weren't questions,,,,they were inquiries

Uh huh, and Clinton never had sex with Monica, right?

> to claims you put forward
>on this group,,if you didnt tell such whopper lies all the time on such
>a regular basis, there would be no room for such inquiries now, would
>there be, Frankie,,,,,.....if you really wish, we can grab tons of
>"stupid" questions in direct response to your lies and claims,,in the
>past week you have accused me of being all kinds of different
>people,,now I'm Cranium? Ahhahahhahha..you're head sure is twisted,
>Frankie,...and your rage is out of control,,you can no longer contain
>yourself.,,you're ate up over this identity crisis that ails you and
>your mental capacity is rapidly deteriorating, once again, over that of
>which you have no control, and it's eating away at you like a cancer.

Your concern is noted.

==========

"...but I admitted I was wrong, Like a man! Something you and QRM
have a problem with. You guys are wrong and you both know it and
are both too small to admit it."

Trying to talk seriously, there is a similarity to gun laws. Generally, there is little enforcement; should you shoot someone, then things get nasty - *fast*. Suddenly, a ton of laws are brought to bear to get the biggest jail sentence (or fine) possible. With amateurs (and CBers), the worst thing is to try and wave a flag in front of the FCC. Should you get their attention, then be prepared for a broadside. This has happened to both amateurs and cbers. Fact is, if you try not to irritate neighbors and other folks, there is a lot you can do and stay relatively free from trouble. Now tell me I'm crazy :)

Jim, have you had good luck with AVG? I didn't. It failed to catch things
that Norton found. Nothing that did damage, but worms nonetheless.

41. FREE CB CRYSTAL MIXING CHARTS

Newsgroup: rec.radio.cb
Date: 2003-07-02 01:07:00 UTC
From: Lou Franklin <lou@cbcintl.com>
Message-ID: <h1c4gvkaj4rargusc9bdpimjeehfr9bpdk@4ax.com>
Source record: 161575

We've now added all our crystal charts for free download/printing (PDF) on our site. These 36 charts cover about 95% of all American mobile & base CB models, and show exactly which crystal(s) affects which mode or channel. Very useful for troubleshooting "dead channels" symptom, or for modification to 10M or other freqs.

Check 'em out at: www.cbcintl.com/xtals/xtals.htm

We specialize in CB books, plans, kits, and high-performance CB accessories. Please visit our Web site to see all those "goodies" you just can't find anywhere else!

www.cbcintl.com

You can also download our complete CB catalog, or just the Order Form from the home page. We've also got a new Email Order Form (for VISA/MC) if you're in a hurry.

* *
In case you didn't already know...

Who are we? Since 1976 we've been the leading supplier of books, plans, and kits just for CB radio. Do-it-yourself repairs and modifications, 10-Meter Ham conversions, amplifiers, FM converters, bleedover filters, adding new frequencies, etc. Secrets of how to increase your power, range, and privacy.

For product questions or additional details
on what we offer, please email us directly at:

Ummmm, Lancaster, Oh. Under the Local Enforcement ruling. (www.arrl.org).
See the yellow
border at top. Click on "ARRL Letter" and read the last 2-3 editions. I got
scolded by Cranium
for posting it originally.

Next go www.rainreport.com. When it loads see the left side and click on
''FCC Enforcement"
(You have to have a media player). Listen to Darryl Duckworth, of the
Consumer and Govern-
mental Affairs, read the last edition. It is dedicated to ham radio, but
since you asked, there is
one CBer just this last period that was warned about operating on 26 MHZ.
In spite of what
people say, this area DOES have government and military assignments (one
being Civil Air Patrol/
USAF). The heat is gradually being turned up.

Go read Skipp's website. It is on there.

I don't give my callsign out here because it is irrelevant on this newsgroup.

The amp has been discussed on the forums below I'm sure.

They also don't do much discussion of Collins 208 series amplifiers on those forums, but I know for a fact that people use them on the amateur bands... Does that mean that they don't use them? Just because they aren't discussed?

I have a SunAIR amplifier that isn't discussed on the forums listed below. Does this mean I can't use it there?

Your comments mean nothing, troll.

Or maybe it is because the amplifier is also used by people on 11 meters,
and the guy is looking for someone who actually is familiar with them, and
using all the tools at his disposal.

Would you still be a spinless wussy if someone came here and asked a simple
question about rebuilding a carb on there old musclecar? Doubtful.
Proving, your a troll.

Your talking present day law and present day statutes.

The amplifiers that are being discussed have nothing to do with present day manufacturing guidelines, as they where built before the anti 11 meter laws and regs went into effect.

Nice try, tho.

Source record: 161588

To All,
I have a very old, but working well, Truetone (Western Auto, remember them!!) 40 channel SSB that uses the PTBM048AOX board. The interesting thing about this radio is that the Clarifier is in the mic!!. I would like to know if anyone knows how to unlock the clarifier.

I know, I know, opening the clarifier is not allowed by the FCC, so consider this an informational request. I don't want to start a flame war...

If anyone could or would take the time,,, I would love to have an explanation of how the clarifier works, both open and locked...

RadioBob

Frank's right. That Palomar was typical of cheaply built amps being abused by CB outlaws of the time, which is what prompted the present day laws and statutes to be enacted.

I'm sure you will get plenty of responses via email. But if you really want to know what the terms "clarifier" and "locked" mean, try a ham newsgroup. Better yet, do a search on Google and see if the responses you get in email are in sync with the comments from people that don't have to hide their identity.

Hey, even moped has some quality Collin's shit. The stuff commands respect. To
speak the Collin's name in vain, or in the same paragraph with any sweep tube
amp, is pure sacrilege.

>> Your comments mean nothing, troll.

Even better, why did he feel the need to respond if, as he says, they "mean
nothing"? Duh.

>> Toll_Free
>
>You should change your name to brain-free.

An open mind is highly encouraged in this newsgroup, as it's the only way an
inquisitive CBer can wade through all the CB voodoo and mythology.

He would probably be better off posting such a question in a grease-monkey
newsgroup. Or do you think the carbs are more on-topic here than CB radio?

>What's a "big filter"..? Like most current tube amplifiers, the more
>practical output section would be a Pi-L layout. A Pi-L output doesn't
>have to be really big.

If you want a sweep-tube amp (one that met specs in the 70's) to be legal in
this decade (amateur service, 30+ years later), then you need to attenuate all
harmonics well below an absolute power level -- we're talking milliwatts -- the
old standard of (thirtysomething)dB below carrier doesn't cut it anymore. If you
believe anything different then you need to review the Scope's monkey trial.

>:>It was, and still is, a good amateur amplifier that takes either 25 watts,

Do you think that if they could afford a better amp that they wouldn't buy it
instead of a cheap sweep-tube amp? Get real.

> Many
>owners prefered the smaller desktop footprint and the practical power
>gain.

Both obtainable with RF amps using proper RF amp tubes.

> Best of all, you could run it using a common 15 amp 117vac house
>electrical outlet. Larger power amplifiers often require upgraded AC
>service into the shack.

Power is power. Run 2000 watts and the power line doesn't care if you are running sweep tubes or nice, clean RF amp tubes. What sweep-tube amp used a power supply any more efficent than that of amps using RF amp tubes -- except, of course, for the fact that most sweep-tube amps didn't have overload protection beyond a simple fuse?

> Made a lot of condo owners choose the smaller
>desktop Sweep tube Amplifiers made by various mfgrs... including
>the Palomar brand.

And made a lot of condo-owners really pissed by all the RFI caused by the sweep-tube amps. If they were so great then why are so many for sale? Duh.

>How about a cost effective mid size amplifier. Palomar even used that darn
>8950 tube. It along with the common (and current) EL-509/519 and

>saw a service in TV set. Yet they were/are designed for service in RF
>power circuits. Funny how that all works out...

Oh, hey, "that darn 8950 tube", the tube that is based on a TV sweep tube, that you claim is a "sweep tube", but the manufacturers claims is a replacement for "RF amps designed for sweep tubes". No argument there. And there is certainly no improvement in spectral noise over a sweep tube. It just gives a few extra watts of dirty RF to those cheap sweep-tube amps.

>: Toll, do you want to go there again?
>
>Been there, done that, coffee mug and tee shirt.

But you ran away from your lies, Skipp. Why did you disappear when presented with several qualified statements that disputed your myth that the use of equalizing resistors on series HV rectifiers is outdated? And that wasn't the only issue you ran away from. I'm using your coffee mug and wearing your tee shirt, Skipp -- thanks for leaving them behind in your hasty retreat.

There were plenty. Try BAMA.

>And why is it someone who chose to use a Palomar became:
>
>"people that couldn't
>> : afford an amp with a tube properly designed for power RF"

Kinda self-explanatory, don'tcha think? I mean, if you didn't have the money for a Collins, Gonset, Hammarlund or Johnson, and you were too stupid to build a Heathkit, you bought a sweep-tube amp like a Palomar. How do you think they got popular? CBers? Nope -- poor hams.

>Seems if the amp works, at the level designed, and doesn't cause undue

>The 300A does so, and continues to this day.

Not according to the FCC. Doesn't meet specs. And it is just as illegal on the CB as any other amp, regardless of whether it was once legal for amateur service or not.

>>

The Ameritron's weren't type-accepted for use in even in the US amateur service.
They used the "export only" shield.

>Ameritron only stopped using the tubes when they became NON cost effective
>(read this, supply of NOS tubes dried up).

They realized that the legitimate US market was more cost-effective than the
other-than-legitimate "export" business. So they began building legitimate amps.

>Which where the legitamate amps from the 300A / 350Z days?

"Which where..."? There have been plenty of 'legitimate' amps through the years.
I can make a very long list of manufacturers that built 'legitimate' amps, and
most of them never built a 'sweep-tube' amp. But you already knew that little
(but important) tidbit of info, didn't you?

Nah... he's n8. He can troll here and Kansas. Surprisingly, for a ham, he spends way too much time talking shit here on a CB newsgroup like CB'ers do on a local shit talking channel.

>I don't use much carrier in my AM transmissions in the first place, Skipp.

"Swang" isn't AM -- it's a distorted attempt at SSB-RC.

>Agreed. But again, how many radios don't either have that option installed,
>or come with it pre-installed nowadays.

You can't name a single -legal- radio with an untuned/unfiltered SS output
because they don't exist. The noise from a transistor is just too much to leave
it untuned, even if it's Class A. But the tuner/filter is usually only
sufficient to meet specs at the specified power of the radio -- if an untuned
amp is used, any noise from the exciter is amplified along with the intended
signal (as well as any harmonics it generates itself), pushing the output way
out of specs.

BTW, what is the mil-spec for your Bird?

Correction: "Swang" is a low-tech attempt to combine the advantages of AM and
DSB-SC, resulting in a few extra watts of distortion on AM but with far less
efficiency than SSB.

Leave the clarifier locked. An unlocked one will
let you slide between and sometimes all the way onto
the freq above & below where you start from. The
way it's done most times, usually makes it very
hard to tune in and stay on freq, that's why I recommend
leaving it locked.

Hypocrite Landshark,

"Locking" the clarifier means that it shifts the BFO in both transmit and
receive as opposed to receive only, the way it comes from the factory. It has
nothing to do with the clarifier's bandwidth. Locking the clarifier usually
results in constant BFO corrections because when CBer A adjusts, the CBer B must
readjust, forcing CBer A to readjust, forcing CBer B to readjust, etc.
Eventually, both CBers go 10-7 several kHz away from center and can't find their
way back to normal channels without someone else sending a beacon.

Again, a correction:

>"Locking" the clarifier means that it shifts the BFO in both transmit and
>receive as opposed to receive only,

I said it backwards -- a 'locked' clarifier works in receive only, and
'unlocking' it will make the BFO slide in both transmit and receive. Either way,
the effect is the same; unlock the clarifier and you will be constantly
readjusting it during any conversation.

Correct. I had it bass-ackwards.

>With no zero function, people end up all over the place..

Zeroing is ideal: Reality dictates that people must play with their knobs.

Source record: 161610

From: sparky@NOSPAMaimcomm.net (Frank Gilliland)
Gee, Frankie,,,didn't know you were so overtly concerned,,,,he can
ascertain your claim,,,he merely has to post from that direct access
again.,

>He did.

Sure he did,,,,in May,,that was the last time, Since his disappearance,
he has yet another access site.

>Which "direct access" do you mean?

Exactly. He claimed only one. Thanks for clarifying.

>posted from 209.120.201.77 (Yipes) on May

>12 (Message-ID:

>3EBF8064.30BA@worldlynx.net)

Don't forget 209.120.200.73

>and from

>207.103.222.111 (Voicenet) a day later

>(Message-ID:

><3EC0D2BA.5C8C@worldlynx.net),

And don't forget 207.103.222.114

>which

>means that he has access through both

>services.

Which contradicts his claim of only one posting "access". Again, I thank
you. Dave lies as much as you..but I never thought you would be the one
to loudly illustrate his intentional but incompetent lies.

>And you probably didn't notice that the

>Voicenet IP is fixed while the Yipes IP is

>dynamically allocated (209.120.xxx.xxx). IOW,
>his Voicenet access is probably DSL or cable,

Probably not, as I usually don't notice these things,,but when one makes
a claim that only one access is available to them and people like you

prove them wrong,,well, I can't help in pointing such things out,
especially when said person was unprovoked and unruly in their manners
and etiquette concerning simple communications to another for no reason.

>but he can access his account using dialup

>through Yikes.

Illustrating he has a choice of how he accesses,,,,something he denied.

>Regardless, his email addy hasn't changed

>and neither have the format of his headers,

Sure they have,,,better check with him before you start claiming
such,,he isn't the one claiming his headers ahven't changed, so I have
no need to dispell such with the truth.

>both of which are the best indicators that he is

>still using the same ISP as before,

As before what?As before his claim that he used a villanova account only
temporary?

>and hasn't

>been tossed by you or anyone else for ISP

>violations.

Of course not,,,,you girls attribute way too much power to myself..I can
toss no one,,I am not an ISP,,,I am not a webmaster, I am not a
moderator,,those are your self-admitted, failed wet dreams.

,,you mentioned "ISP".

>...yeah? So?

Why are you bringing ISP's into this equation?

>Because that's what you are talking about.

No, I'm specifically speaking of access to this group....example: google
allows one to post, but isn't an ISP.

>What do you think all those IP numbers

>mean?

Google has them too,,,,,,,,,so why don't you explain the difference to
yourself so you;re not so cornfused and coming across like a
heretic.....because I'm not really interested in what you say,,and
going by the responses you have managed to garner in the group, you have
effectively managed to alienate most,,,,,the only replies you receive
are Lelnad, N8 and Geogre shills,oh, and of course your lowly self.
I merely made the observation concerning Davie's claimed he had always

accessed the group in the same manner,,my spamblock proved it false the first time and you just proved it false a second time.

_
Your imagined battle to which you refer
this constant "losing" appears to have resulted in each and every one of the voobs named faves losing posing accesses. Strange coincidences from the aliens and their signals, eh, Frankie? Think I'll go back to "losing" more often. It's funny at times and at others, mildly amusing.

>Well, I'm certainly laughing at the fact that you

>have been proven wrong yet again!

But he hasn't posted using the other access since May,,,how do you figure that proves anything?,,,,But let's assume he can and will post from there again,,,,,it nullifies his post I held on to where he claims "I have always accessed the group in the same manner and have no reason to do otherwise",,,,we can also fish out his post in the same thread where I illustrated he accessed the group in several different manners, then turned around and claimed he doesn't know why his ISP routes his posts to several other accesses..either way it makes him a liar,,thanks for pointing such things out, Frankie mah boy!

>The only thing I pointed out was your

>ignorance of ISP subcontracting.

LOL,,perhaps that was your intended, but with your magnificent incompetence, you managed to point out Davie's "ignorance". See, Frankiestein, it was Davie who claimed he had "no idea" of how his routing and ISP "subcontracting" and posting works, so, the only thing you managed, was the "pointing out" of the ignorance of n3cvj and his statements. If you forgot he made those claims, I would be more than happy to refresh your memory.

_
>Oh yeah, and the fact that he was never

>tossed.

Perhaps,,,,perhaps not,,,,I believe the latter.
He still has yet to post from the old access site.,,but it seems to upset and bother you a great deal, Frankie.

_
"I do not get upset about any CB law being broken."...Frank Gilliland (Sparky@cet.com)

>I don't.

Hahha...sure you do Frankie,,you have a plethora of liquid-courage filled posts raving about the inhumanity, lawlessness, and "irresponsibility" of illegal cb operators. You have used the word "anti" and the made up word "keyclown" too many times for anyone to believe you simply "do not care"......you have defended the erratic and

attacking behaviors of n8, Lelnad, wa3moj, and the other radio scum while calling others names simply for expressing their views..most recently, your self-example is your claim that you refuse to assist one with certain questions as you're in a cb room and the questions pertain to ampifiers and hammie radio,,,,,but if you didn' "care" like you attempt to ply when you're under the influence, there would be no issue,,,,LOL,,,,see, Frankie,,you really aren't sure of anything...just keep tossing the whoppers out there,,it makes for great drama....oh, along with your unquenchable thirst for hate..you also claimed ilegal cb was your "moral" duty to "fight" against in the same post,,,,,,,,you're really way in dep with the self-contradictions, Frankistein.

>Well, you sure got me there, Twist.

You got yourself with your lies, Frankie, as I'm not attempting to "get" you in any manner whatsoever, Frankie,,,you;re paranoia is doing this to yourself, Frankie.

>Do you need the reason explained to you a

>fourth time?

Sure,,keep going,,,,you ilustrate what a lying lid Hall is with each post you refer to him.
Your explanations contradict your other posts. In one post you claim such things do not bother you, yet in another, you attempt to justify your anger, attacks, and erratic behavior by blaming it on cb and claiming it's somehow YOUR moral obligation and duty to do something about illegal cb....have you always exerted so much impotent energy on that of which you do not care about? Speaks volumes for your well-being and mental status..actually, it merely illustrates what a habitual and pathological liar you are, Frank.

>Who do you think I am -this- week, Twisty?

Not concerned with who you are, Frankie,,the defeated ego and self-hatred dictates you
fancy yourself a "somebody" illustrated by your self-claims of being a broadcast engineer..your ego needs a boost and you attempt to boost and soothe it through claims that you feel somehow mean somehting to another besides yourself. If that was the cxase, your hordes of posts wouldn't be ignored, for the most part....not one reg is replying to your posts, Frankie, except me, as I give back better than you dish out. You've done exceptionally well solidifying your reputation. And despite your cries that you somehow do not care about cb, your pathetic cries about rules and regs, coupled with your anger that you blame on others (abdicating all sense of personal responsibility) illustrates your repeated and involuntary lies.

You refer to yourself as "Frank", as that is your chosen internet name. Does your identity crisis, low self-esteem and self-hatred now dictate you retreat to the "guess-who-I-am" game, again,Frankie? You always run and hide your tailfeathers when your lies and self-contradictions are

shared with the world. Does this somehow take away your flawed accusations that I use mindspring, aol, earthlink, live in WV, write for pop comm, am a hammie named "Roger", show headers to prove such, tell me I am now "Richard Cranium" in Rochester? LOL..Gee whiz, Frankie,,,,,,,,,to even the most green webtv layman, it appears you are the one professing internet ignorance when it ocmes to reading ISP headers,,,,,LOL.

_
"RF pirates affect me directly in my work."...Frank Gilliland (Sparky@cet.com)

>They do. Evidently it's beyond your

>brainpower to realize that I work for an

>organization that is legally authorized to use

>the 'freeband'.

Really? In adddition to the other 3 "jobs" you hold? LOL..you need to stop attempting to explain your lies away, Frankie,,you dig yourself deeper with each swig from the bottle,,,problem with liars,,,is they can't remember what they said and their lies always come back to trip them up,,,you never disappoint.

>What "other 3 'jobs'"?

That's what happens when one lies as you do,,youcan't recall which lies you told to who,,

>hey, I forgot that you think I'm still active

>USMC, too.

Not surprising. A deficit in communication as great as yours makes it diffult for you to retain conversations as recent as last week. Nevertheless, you made a stand-alone claim of "I never retired" concerning the Corp.....nor did you attempt to qualify such claim when it was posted. "Never retired" would be construed as currently active by those not suffering from such deficits as yourself. Go on,,,ask around.

>Yeah, that's a lot of jobs to hold down,

>don'tcha think?

Oh, heck yea,,,,,,think they would pay as much as Lelnad claims to make and still allow you both the free time you each put in here?
In addition to YOUR statements concerning YOUR service in the military, YOU now are making yet more claims concerning YOUR job which, alas, is more than likely another lie, given your predilection and fondness for telling lies on the internet.. This illustrates your low self-esteem, self-hatred, whacked ego, need for acceptance, and incurable satiation concerning what others think of you. All the compete opposite of what you have claimed in the past..no surprise, eh Frankie.....

_
"I have admitted to lying in this
newsgroup, and on more than one occasion."......Frank Gilliland
<sparky@NOSPAMaimcomm.net>

>I have, and I admitted it, "Like a man!"

Onec a liar always a liar.,

>Brilliant logic, Twist.

It is.
And a liar is not a man, a liar is a low life.
You realize such, as you slowly are becoming unglued realizing the way
you are viewed by the majorty in rec.radio.cb, and more than likely on
the hammie forums as well,.

>Let's see what happens to your brain when

>confronted with this little classic paradox:

>Everything I say is a lie.

No paradox exists. Your scenario isn't plausible, let alone possible,
even when applied to the world's foremost and most notorius liar.
Try not to think so hard Frankie, you merely end up allowing your
involuntary emotions that I control to dictate actions that illustrate
your ignorance.

_
besides,,you had no choice,,you were forced to admit your lies, as they
were conveniently illustrated for all to see, otherwise, you'd still be
self-contradicting yourself whenever the power of twist moves you......

>You have no choice but to bury your lies in

>more lies.

>Your megalomania won't let you do anything

>else.

Interesting how I'm accused of lies only when you or the voob's named
faves come gunning for me unprovoked, eh, Frankie? LOL! Interesting how
my "meglomania" only comes to fruition following a post directed toward
myself by one of the big 4 losers,,,yourself, Lelnad, N8, and wa3moj.

>Any more stupid questions, Twist?

They weren't questions,,,,they were inquiries

>Uh huh, and Clinton never had sex with

>Monica, right?

I told you once, Frankie, I don't dwell on yesterday and history such as yourself. Instead of living in the past and remaining angry over history and that of what you can not change, you ought try living in the present and try being less of a jerk.,,you know,,the golden rule and all that you refuse to practice.

_
If you didnt tell such whopper lies all the time on such a regular basis, there would be no room for such inquiries now, would there be, Frankie,,,,,.....if you really wish, we can grab tons of "stupid" questions in direct response to your lies and claims,,in the past week you have accused me of being all kinds of different people,,now I'm Cranium? Ahhahahhahha..you're head sure is twisted, Frankie,...and your rage is out of control,,you can no longer contain yourself.,,you're ate up over this identity crisis that ails you and your mental capacity is rapidly deteriorating, once again, over that of which you have no control, and it's eating away at you like a cancer.

>Your concern is noted.

Your arrogance is allowing your ignorance to mistake my congenial replies to your initiated threads as concern. You couldn't be more mistaken.

An article concerning Nextel that was snipped for brevity.....
Of Kenseth And Consistency
JON SOLES
Nextel, one of the nation's largest wireless service providers, is NASCAR's new sponsor. The 10-year, $750 million deal seemed to come together out of the blue. But it's good news for the sport. It will take some getting used to, seeing Nextel replace every Winston Cup Series logo at all the race tracks and on all the uniforms. Unlike R.J. Reynolds, Nextel is not restricted in its advertising. RJR sells cigarettes, and was very restricted in how it could be used on television as a sponsor. Of course, that is the way it should be. And with all the multi-billion dollar lawsuits against tobacco companies, it seems prudent to cut the enormous expense of sponsoring a racing series. However, I can't help but fear what Nextel's sponsorship means for the race fans. Obviously, it will work as a marketing tool, and I expect hundreds of thousands of racing fans to start using Nextel. That's good for Nextel and it's good for the fans ☐ consumers who deserve a good wireless communication product. But it also means I will have to hear a lot more personal conversations about who is picking the baby up after work, what's for supper or who is taking the hunting dogs to the vet.
Nextels work like walkie-talkies, and if you happen to be near the receiving end one, you are going to hear everything because Nextels seem to have the broadcasting power of a military CB radio. I'm sure that the Nextel news is very intimidating to the folks at Alltel and Cingular. Don't be surprised if these two wireless companies sell walkie talkie/phones next.

_
Ever seen one of them 'military cb" radios <g>?

78. Something wrong with Frank..

Well Twisty, why don't I quote you a little bit from the operator manual for the Swan 500, a radio with the equivalent of an 'unlocked clarifier':

"...If you tune so the received voice is higher than normal pitch, you will then transmit off frequency, and your voice will sound lower than normal pitch to the other station. He will probably retune his dial to make you sound right. If you keep this up, you'll gradually waltz one another across the band. If both of you are mistuning to an unnatural higher pitch, you'll waltz across the band twice as fast. (And someone will no doubt be accused of frequency drift)....."

And if there is one thing you can hear every day on the CB it's someone complaining about someone else's frequency drifting. Now we know why.

With the clarifier locked, receiver A sets his clarifier to transmitter B, and receiver B sets his clarifier to transmitter A. That's it. Set it and forget it. No waltz, no problems, no other channels are compromised, and everything works just like it was intended. So why would anybody unlock their clarifier? To work the space between channels. That's all. But that takes an additional mod to widen the bandwidth of the clarifier, making it too sensitive and almost useless for SSB. It's also harder to re-center on a channel because the clarifier is now about ten times as sensitive. And when working between channels, the bandwidth of the signal can be wide enough to send AND receive interference from -both- adjacent channels, especially if the radio has been modified for overmodulation, which can also be complicated by the inaccuracy of the modified clarifier (it doesn't swing symetrically). IOW, unlocking the clarifier is really quite stupid.

10 meter radios are not cb radios.

From: sparky@NOSPAMaimcomm.net (Frank Gilliland)
>Well Twisty, why don't I quote you a little bit

>from the operator manual for the Swan 500, a

>radio with the equivalent of an 'unlocked

>clarifier':

Because a "Swan" is nowhere near the equivalent of the typical cb radio,
but I will permit it's validity as your stated argument for the sake of
you wishing to argue for no other reason other than your personal
problem with myself.

>"...If you tune so the received voice is higher

>than normal pitch, you will then transmit off

>frequency, and your voice will sound lower

>than normal pitch to the other station. He will

>probably retune his dial to make you sound

>right. If you keep this up, you'll gradually waltz

>one another across the band. If both of you

>are mistuning to an unnatural higher pitch,

>you'll waltz across the band twice as fast. (And
>someone will no doubt be accused of

>frequency drift)....."

As usual, your argument is one sided and does not offer the complee
picture. It presents only that of which supports your stated agenda.
Some of the above may be not only applicable, but desirable, especially
when one wishes to slide right off (up or down 5 khz) or in between
frequencies. This is far quite more common than you may wish to
acknowledge when one takes into account the popularity of ten meter
radios in use for cb and the freeband and the sales of such radios.

>And if there is one thing you can hear every

>day on the CB it's someone complaining about
>someone else's frequency drifting. Now we

>know why.

Not on AM,,,and like I said, i's perfect for sliding up or down 5khz to place one in between freqs, should one so desire.

>With the clarifier locked, receiver A sets his

>clarifier to transmitter B, and receiver B sets

>his clarifier to transmitter A. That's it.

Which also prevents such abilities as the 5khz slide which is so desirable in operation of these type radios you speak of, of which the Swan is a non-typical example.

>Set it and forget it. No waltz, no problems, no

>other channels are compromised, and

>everything works just like it was intended. So

>why would anybody unlock their clarifier? To

>work the space between channels. That's all.

Ahh,,so you did get around to acknowledging such.

>But that takes an additional mod to widen the

>bandwidth of the clarifier, making it too

>sensitive and almost useless for SSB. It's also

>harder to re-center on a channel because the

>clarifier is now about ten times as sensitive.

The unlocked clarifier is almost a given with the type radios you refer, but for which you offer an obsure example (the Swan).

>And when working between channels, the

>bandwidth of the signal can be wide enough to
>send AND receive interference from -both-

>adjacent channels,

Sure,,and it also can "not" be wide enough to so.

>especially if the radio has

>been modified for overmodulation, which can

>also be complicated

Apples and tomatoes <g>. Your sudden introduced entry of modulation modifications has nothing to do with my position on opened clarifiers.

>by the inaccuracy of the

>modified clarifier (it doesn't swing

>symetrically). IOW, unlocking the clarifier is

>really quite stupid.

Depends. Some actually fancy the constant adjusting and fidgeting,,,the needless extra knobs, bells and whistles to be found on many radios (hammie radios included) illustrates my position quite nicely. Properly done, there is no problem. Once again, you are presenting a situation that does not readily exist when applied to typical cb. Sure, on sideband one has to clarify another in,,,so what? As usual, we (meaning those of us actually clarifying others with our unlocked clarifiers) aren't the ones claiming a problem exists.....you are. Brings to light the tons of problems you have with cb and those who use it in a manner not approved by yourself.

Not surprised. I have learned there are many things you can not do, Frankie. Comprehend is one..face yourself is another. Stay on topic of cb is yet another.

>If Twisty is going to try harder he should leave

>the group for the good of all.

Now, now,,,that you get so angry over your self-embarrassments is no reason to shout your impotence and ignorance in quest for censorship of that of whcih you disagree or can not comprehend. Your attempts at silencing views you oppose may make sense in Iraq or to some of those who support the Taliban and terrorism, but I assure you, such tactics that work in such Godless and freeodm-less countries won't fly here. I suggest you find a venue that will cater to such anti-American views you espouse, as opposed to the foot stomping and crying over your impotence at controlling that of which you do not like.
And try not to allow your detriment of personal feelings to further retard your ability to remain on topic. Ditto for your experiencing feelings of inadaquecies and no self-worth.

Frank;
You left off the rest of what the Swan manual said.

Mistuning results in serious harmonic distortion on the voice, and should be quite noticeable on the voice, and should be quite noticeable to the average ear. Some will claim that if they don't know how the other person's voice actually sounds, that they can't tune him in properly, but this is not true. With a little practice, it will be fairly easy to tell. Some voices are rich in harmonics and are easier to tune in than a person with a "flat" voice. Also, a transmitter, which is being operated properly with low distortion, will be easier to tune in than one that is being over-driven and generating excessive distortion. There is no mistaking when you have a station tuned right on the nose. It will sound just like "AM", so to speak. Mainly avoid the habit of tuning so everyone sounds higher than normal pitch, or like Donald Duck. This is incorrect, unnecessary, and sounds terrible.

I guess you just need more practice on how to tune a SSB radio? Its not all that hard, even you should be able to figure it out.

An article concerning Nextel that was snipped for brevity.....
Of Kenseth And Consistency
JON SOLES
Nextel, one of the nation's largest wireless service providers, is
NASCAR's new sponsor. The 10-year, $750 million deal seemed to come
together out of the blue. But it's good news for the sport. It will take
some getting used to, seeing Nextel replace every Winston Cup Series
logo at all the race tracks and on all the uniforms. Unlike R.J.
Reynolds, Nextel is not restricted in its advertising. RJR sells
cigarettes, and was very restricted in how it could be used on
television as a sponsor. Of course, that is the way it should be. And
with all the multi-billion dollar lawsuits against tobacco companies, it
seems prudent to cut the enormous expense of sponsoring a racing series.
However, I can't help but fear what Nextel's sponsorship means for the
race fans. Obviously, it will work as a marketing tool, and I expect
hundreds of thousands of racing fans to start using Nextel. That's good
for Nextel and it's good for the fans - consumers who deserve a good
wireless communication product. But it also means I will have to
hear a lot more personal conversations about who is picking the baby up
after work, what's for supper or who is taking the hunting dogs to the
vet.
Nextels work like walkie-talkies, and if you happen to be near the
receiving end one, you are going to hear everything because Nextels seem
to have the broadcasting power of a military CB radio. I'm sure that the
Nextel news is very intimidating to the folks at Alltel and Cingular.
Don't be surprised if these two wireless companies sell walkie
talkie/phones next.
_
Ever seen one of them 'military cb" radios <g>?

I wouldn't have even seen "Geogre's" post if you ignored him.

When half the new posts disappear after downloading headers,
you know your KF is working. I see your posts between "read"
posts, and just skip those replies. It's tough to ignore "it",
but try. <;

Not on AM,,,and like I said, i's perfect for sliding up or down 5khz to
place one in between freqs, should one so desire.

>And if I had an unlocked clarifier, the schmuck
>that gets between 36 & 37 would get a piece

>of my mind.

That's not usually where sliding in between freqs occur. Most
freebanders are courteous operators.

>What makes him think I want to hear that high

>pitched shi+ in the middle of a QSO? Asshole

>he is.

If that occurred, then I would agree with your assessment,,,however,
several in between "channels" fit the mold where a 5khz, or even 10 khz
bump would not effect anything negatively. 5 up from 26.985, comes to
mind immediately, as does the famed "22a".

>The one guy with a drifty Galaxy got a real

>radio. Now he sounds good.

Are we speaking cb or hammie? AM or SSB? Big difference in which mode
you speak of concerning the Galaxy. For cb, loudness and distance has
always been the name of the game, not broadcast quality audio. That is
usually reserved for those who wish to experiment with such things, and
that invariably leads to hammie radio, not cb radio. On AM cb, a
properly golden-screwdriven Galaxy screams,,,look how many hammies I
piss off just by being heard on the freeband,,,,,,,it's a regular thing.
I don't need anyone to tell me how I sound,,,I know I sound good....and
loud...the tapes some of these hammie-lid clowns made of me and played
back (breaking the law in the process) tell the tale....watergates don't
lie.,,,hahahaha!

>Anyone else see the TMA rockets from

>Wallops?

Only rockets we see here are the space shuttles going up.

>I guess you just need more practice on how to tune a SSB radio? Its not
>all that hard, even you should be able to figure it out.

There was a reason for not including that paragraph. Compare the Swan 500 to the
typical CB rig: The Swan has a very nice, full sound, while most CBs have cheap
little speakers that make everyone sound like Donald Duck regardless of how well

adjusted the clarifier is. Also, many CBers use power mics and have the modulation turned up to the point of audio distortion, which makes it that much more difficult to tell when you are tuned. And don't forget that not too many Swans are mobile, while many CBers have to contend with the noises of driving. So you are comparing amateur radio to a hobby where it's cooler to be loud than clear. Apples and oranges.

Legalities aside, a jump switch is a much better alternative to opening up the
clarifier. The latter is easier, so that is the mod most often used.

Quite right, the Swan is intended for legal operation on the ham bands -- the
modified CBs are not legal, and most were not intended to operate beyond the CB.

>
>>bandwidth of the signal can be wide enough to
>>send AND receive interference from -both-
>
>>adjacent channels,
>
>
>
>Sure,,and it also can "not" be wide enough to so.

And it also can be narrow enough to fit but the over-sensitivity of the
clarifier can prevent centering. Not like illegal operators care if they
interfere with other channels anyway...

>
>
>
>Apples and tomatoes <g>.

Both are red, both are round, both can be eaten raw or cooked, etc.

> Your sudden introduced entry of modulation
>modifications has nothing to do with my position on opened clarifiers.

Sure it does. Find a radio with an illegally modified clarifier and it's a fair bet that the radio has had the modulation 'tweaked' and/or modified as well.

>>by the inaccuracy of the
>
>>modified clarifier (it doesn't swing

>(hammie radios included) illustrates my position quite nicely.
>Properly done, there is no problem. Once again, you are presenting a
>situation that does not readily exist when applied to typical cb.

Actually, I'm presenting the situation that is very much a common occurance, mainly because the users of those modified radios have no clue as to how to "properly" operate such junk.

> Sure,
>on sideband one has to clarify another in,,,so what? As usual, we
>(meaning those of us actually clarifying others with our unlocked
>clarifiers) aren't the ones claiming a problem
>exists.............................you are.

You don't listen to the radio much, do you? Instead of talking all the time, try listening for a while.

> Brings to light the tons of
>problems you have with cb and those who use it in a manner not approved
>by yourself.

Not by myself, Twist -- a manner not approved by the law, rules which are intended to give everyone the same amount of spectrum and prevent others from screwing it up.

Got three or more in the conversation? Just set the clarifier to where everyone
sounds the best, or readjust as needed. But if they all have unlocked clarifiers
and all are constantly readjusting their transmit freqs... yikes! Thanks for
pointing that out!

Therefore: ....

Do not modify a CB radio. Just buy a legit amateur radio and use it
stealthfully. Remember that Part 95 is for CB. If you don't use a CB,
and you don't operate on CB frequencies then you can ignore part 95.
It does not pertain to you. Some will say you need a ticket to operate
a amateur radio, but this makes absolutely no sense. A ticket puts you
in the FCC database for easy identification later. Do you need this?
Stealth is the key.

You are truly paranoid.

And do you seriously think that running a couple hundred watts on the freeband
is the way to operate with "stealth"?

Dumbass.

Looks like no one bothered to answer the question. If the radio is very old, it likely used a variable capacitance diode across the crystal in the oscillator. Crystals can be adjusted slightly by changing the capacitance across the terminals. A special diode would be included across the crystal. The diode, a variable capacitance diode (or varactor), would normally be fed a fixed reverse voltage which would increase the depletion zone within the diode (area with no free electrons or holes to allow current to flow), resulting in a certain capacitance. Operation would be normal. In receive, however, the fixed reverse voltage would be changed to a voltage determined by a voltage divider. The big part of that voltage divider was a potentiometer labeled 'clarifier'. As the knob is turned, the voltage across the varactor changes. As the voltage is lowered, that depletion zone becomes smaller, effectively moving the conducting regions of the diode closer together. In other words, the 'plates' of the diode capacitor were getting closer together. This will change the frequency of the oscillator. You could also move the knob the other way, increasing the voltage, moving the 'plates' of the diode capacitor further away, and reduce the capacitance, thus changing the frequency in the other direction. Thus, in transmit, your frequency is fixed; in receive, you can move (slide) up or down somewhat. How much you can move is determined by the crystal, the diode, and the voltage divider. The key is finding where the line is switched between transmit and receive. At that point, it is simple to make the change so the clarifier will change frequencies both in transmit and receive. This used to be used by folks who wanted to get 'between' channels, thus allowing them less interference by folks dead center on channels. This is a simplistic explanation of what is going on. A look at the schematic should reveal how to do this inside of several seconds. If you can't read the schematics, I wouldn't recommend trying the mod. Come to think of it, I wouldn't recommend the mod anyways, but that is essentially what is being done in the radio as far as the clarifier is concerned. BTW, I don't know what the new radios are using. Given direct digital synthesis and CPUs, some of them may well use the analog signal from the clarifier and make the change in software (and may well not be modifiable - I don't know).

Ok,, first off sorry I caused an issue. I am not a troll and just wanted to know a little bit about a common mod. I listen to ch 38 lsb here in PHX and sometimes talk. Most times I get the old,,, your off freq. My freq counter shows right on the money to the 4 decimal. I assume that most folks here have the clarifier unlocked. I decided I would try to open the clarifier and add a switch to lock and unlock... From the looks of the posts not such a great idea.. I will leave the clarifier alone.

Jim thanks for the wonderful explanation. I had an idea that there was some sort of locked voltage on the xmit and a variable voltage on the receive. Your explanation was excellent... Given that I don't know as much about RF as I most likely should... Again Thanks...

The next question is why haven't I seen any mods to add a second pot (and or lock/unlock switch). It seems to me that you could have two pots,, one for xmit and one for rcv, as well as a switch to "relock" the clarifier. This way you could have your unlocked "cake", should you need it and yet be able to "center" anytime you wanted!!! Just a thought???? any reason that I am missing here????

Bob

P.s. please don't let this become a flame again... Thanks...

Again you are showing your ineptitude.

It is a must when using SSB to have the ability to make the receive
and transmit frequency track together. This can only be done by
unlocking the clarifier. All other combinations of clarifier setups
and rit controls are secondary.

No matter what, especially if you're using your radio in a mobile the
frequency WILL drift, so you WILL be moving your clarifier to
re-adjust as the radio warms up. If you want your transmit to sound
just as good as your re-adjusted receive, then you have to have Tx
and Tx tied together.

In addition, no radios will be on the same frequency especially
if you consider temperature changes. This is critical on SSB. If you
had just two off frequency SSB radios trying to communicate to each
other the standard clarifier setup will do. However throw a third off
frequency radio in the mix and now it is impossible for any one of the
radios to tune in two radios at the same time. This is not a remote
scenario. It happens all the time with stock radios. Therefore the
easiest solution is to tie the Rx and Tx together and then multiple
SSB parties can all tune into the same frequency. The exact
frequency is unimportant as long as everyone is on the same
frequency.

Good question. Sounds like an interesting idea. I would think it could likely be done (on the old sets). Of course, there are trade-offs in the new vs old. Some of the new rigs are easily modified (and not approved, or 'certificated' by the FCC because of this) for such things as 'extra' channels since the were originally designed for use in other countries or other applications and used the same basic 'brain' for the rigs. Simple jumpers or software programming would allow the manufacturer to use the 'brain' across a number of different radios, thus realizing cost savings rather than a new cpu for each different radio. Seriously, I wonder if anyone could quote the prices of cb radios back in the early 60s? How does that compare with today's prices (especially taking into account inflation!). Some UHF business band radios use software programming and are quite capable of being programmed into the 440 MHz amateur band. I know of some that have been used by hams and then reprogrammed back into the business band and used there once again (totally legal as the rigs were certificated for use in the business band and the user was licensed for that. The amateur could, of course, use it in the amateur band.). These radios could essentially do what you suggest since you could program virtually any frequency and any offset (different transmit and receive frequency and either one could be above the other - or on the same frequency); essentially the FM equivalent of both a transmit and receive independent 'clarifier'. BTW, as far as 'flames' go, that is part and parcel of the rrcb newsgroup :)

The drift in the modern PLL systems is almost non-existant, and as long as nobody has 'tweaked' the reference oscillator, there is no need for shifting the TX freq. Some of the old crystal radios had a 'delta-tune' feature, but that was back in the stone ages before digital PLLs and high-tolerance reference crystals. You would be hard pressed to find an off-the-shelf CB today that isn't within a few hertz of the target freq. Even older CBs, if maintained properly and occasionally calibrated by a competent tech, will work well within the tolerances of the new radios. And you are also forgetting that not everyone has a freq counter, and even if they did that freq counters drift just like the radios.

Your argument just doesn't hold water.

I don't think you, Dougie-style, or Georgie-girl ever noticed that
before! You continue to amaze.

Considering the number of hams that troll this newsgroup, he probably
thought it was a good place to advertise it. And it's not illegal to
use it for listening, only for transmitting on 11m.

Tell us Frank..... Tell us were we can buy the CB radio with
a high tolerance temperature compensated reference frequency.
You know.....where the frequency stays stable regardless of
temperature.

I love it when I can make you stick your foot in your mouth. It forces
you to reluctantly take that other member out of you mouth.

Manufacturers (and hobbyists) were making temperature-stable oscillators more
than half a century ago. All you do is plot the temperature vs. freq, calculate
the temperature coefficient through the operating temperature range, then
compensate with a component (usually a capacitor) that has an equal and opposite
TC. And also remember that solid-state radios drift far less than tubes simply
because they don't have such a wide temperature variation to tolerate. Modern
manufacturing processes result in components with much higher tolerances and
much lower temperature coefficients than back in the tube days, and because of
the incredible reduction in the size of active devices over the years, cheap
consumer electronics have circuits with compensations and redundancies that
weren't even dreamed of fifty years ago.

IOW, if you need to compensate for drift in a modern PLL radio, you better get
it checked out at the shop cause there's something wrong with it.

You are digging a deeper and deeper hole for yourself. Let me
see if I can bury you.....Go to this page. Read the specs
for frequency tolerance and frequency stability. Interpret the plus
and minus frequency at 27meg. I'd be surprised if you can do it
correctly and even more surprised if you would state it publicly.

(These CB radios have very good specs for a CB radio)

http://www.rfwiz.com/UnidenGrantLT_Wash_Specs.htm

Now tell me how three SSB CB radio operators can enjoy a
conversation when one is low in frequency, one is high, and one

is right on frequency?

>conversation when one is low in frequency, one is high, and one
>is right on frequency?

****
Frequency tolerance = plus or minus .005 %
27,000,000 x .005 % = plus or minus 1350 hz
****
Frequency stability = .001 %
27,000,000 x .001 % = 270 hz
****

Radio 0ne = 27,000,000 - 1350 - 270 = 26,998,380
Radio two = 27,000,000 + 1350 + 270 = 27,001,620
Radio three = 27,000,000

In the stock clarifier condition can any one of these radios tune
the other two in with the same clarifier setting.....NO

If all three radios have tied and movable RX and TX can they
tune each other in?.....YES
****
Just what is tolerable as far as a frequency difference between
SSB operators? ....
Less than 200 hz and preferably less than 50 hz

If their transmit was locked thats what they would be doing. Station A
transmits and all the others adjust until he sounds normal.
Now they are all on the same frequency. Its done that way all the time
Frank.

Your posts are based on legal issues, not correct SSB operation.

You haven't really used a SSB radio have you? You sure don't sound like
you have had any experience with them.

In Baltimore, we split the difference, and have the one that's far off get their radio set closer. Only the ones with cut clarifiers can't tune in off frequency stations, because then they are off to the rest of us that are on frequency. Worst case is that the worst station has to repeat themselves once or twice until we tune. At some point that station gets tired of repeating themselves, and shuts up. I tell him he sounds like Darth Vader when he asks what's wrong. "Why can't you hear me?" I'll answer him with a real deep voice to demonstrate.

Why is it that amateur radio don't have this problem? It's not because
of frequency stability issues alone. It's primarily because they can
align themselves on the fly. The way it should be.

>Well Twisty, why don't I quote you a little bit

>from the operator manual for the Swan 500, a

>radio with the equivalent of an 'unlocked

>clarifier':

Because a "Swan" is nowhere near the equivalent of the typical cb radio,

>Better tell that to "swan radioman".

You're the one comparing it, not he.

_
but I will permit it's validity as your stated argument for the sake of
you wishing to argue for no other reason other than your personal
problem with myself.

"...If you tune so the received voice is higher
than normal pitch, you will then transmit off
frequency, and your voice will sound lower
than normal pitch to the other station. He will
probably retune his dial to make you sound
right. If you keep this up, you'll gradually waltz
one another across the band. If both of you
are mistuning to an unnatural higher pitch,
you'll waltz across the band twice as fast. (And someone will no doubt
be accused of

frequency drift)....."

_
As usual, your argument is one sided and
does not offer the complee picture. It presents
only that of which supports your stated agenda. Some of the above may be
not only applicable, but desirable, especially when one wishes to slide
right off (up or down 5 khz) or in between frequencies. This is far
quite more common than you may wish to acknowledge when one takes into
account the popularity of ten meter radios in use for cb and the
freeband and the sales of such radios.

>Legalities aside, a jump switch is a much

>better alternative to opening up the clarifier.

Again, depends on what one is going to use it for. Also, the mod for
unlocking a clarifier is much easier than installing a jump switch, no?
I suppose one can disable the PA ot some other function,,,but why, when
the clarifier can be opened with much less hassle.

>The latter is easier, so that is the mod most

>often used.

Now you;re actually beginning to frighten me with such linear thoughts
to my own.

>And if there is one thing you can hear every

>day on the CB it's someone complaining about
>someone else's frequency drifting. Now we

>know why.

Not on AM,,,and like I said, i's perfect for sliding up or down 5khz to
place one in between freqs, should one so desire.

>With the clarifier locked, receiver A sets his

>clarifier to transmitter B, and receiver B sets

>his clarifier to transmitter A. That's it.

Which also prevents such abilities as the 5khz slide which is so
desirable in operation of these type radios you speak of, of which the
Swan is a non-typical example.

>Quite right, the Swan is intended for legal

>operation on the ham bands --

You went from speaking of a cb to comparing it to a radio you claim is
to be used on the hammie bands,,again,,no valid comparison exists,,they
are two separate services and have nothing to do with each other, save
for the fact that many hammies freeband.

>the modified CBs are not legal, and most were
>not intended to operate beyond the CB.

Which was never contended anywhere at all.
You just like to hear yourself out loud.

>Set it and forget it. No waltz, no problems, no

>.other channels are compromised, and

>everything works just like it was intended. So

>why would anybody unlock their clarifier? To

>work the space between channels. That's all.

Ahh,,so you did get around to acknowledging such.

>But that takes an additional mod to widen the

>bandwidth of the clarifier, making it too

>sensitive and almost useless for SSB.

Try listening to the cb sideband channels,,we usually never have
problems clarifying others in properly,,,what we do have, is hammies
like yourself telling us such problems exist on cb with unlocked
clarifiers.....illustrating it's not the cbers that are having problems
with our operation, but outsiders such as yourself...certainly, it may
occur at times, but as usual, you cite the exception rather than the
rule or norm.

>It's also

>harder to re-center on a channel because the

>clarifier is now about ten times as sensitive.

The unlocked clarifier is almost a given with the type radios you refer,
but for which you offer an obsure example (the Swan).

>Because illegally modified CBs don't come

>with operator manuals.

I wouldn't know...I have never puchased an illegally modified cb.

>And when working between channels, the

>bandwidth of the signal can be wide enough to
>send AND receive interference from -both-

>adjacent channels,

Sure,,and it also can "not" be wide enough to so.

>And it also can be narrow enough to fit but the
>over-sensitivity of the clarifier can prevent

>centering.

Sure it can.. it can be done properly as well, just as many are, and not cause any problems at all except for those who think their way is not only the best way, but the only way.

>Not like illegal operators care if they interfere

>with other channels anyway...

See? You're assuming because a mod is done, it is done incorrectly. Holding with your train of thought, your courtesy on usenet is no better than those you speak of on the air. Those that behave on the air like you do here, are referred by yourself to as "keyclowns"..,,,in here, your behavior is that of a lid. The golden rule....

>especially if the radio has

>been modified for overmodulation, which can

>also be complicated

Apples and tomatoes <g>.

>Both are red, both are round,

Well,,,,,so are you most of the time, but it has nothing to do with your comparison of a Swan to a typical cb radio in use today,,,see?

_
  Your sudden introduced entry of modulation modifications has nothing to do with my position on opened clarifiers.

>Sure it does. Find a radio with an illegally

>modified clarifier and it's a fair bet that the

>radio has had the modulation 'tweaked' and/or

>modified as well.

Wouldn't know,,,,I'm not a gambling man...I leave that to Willie.

>by the inaccuracy of the

>modified clarifier (it doesn't swing

>symetrically). IOW, unlocking the clarifier is

>really quite stupid.

Depends. Some actually fancy the constant adjusting and fidgeting,,,the needless extra knobs, bells and whistles to be found on many radios (hammie radios included) illustrates my position quite nicely. Properly done, there is no problem. Once again, you are presenting a situation that does not readily exist when applied to typical cb.

>Actually, I'm presenting the situation that is

>very much a common occurance,

There is no way in hell Sparky wrote this. I have no problem giving credit where credit is due, and Sparky was meticulous in his spelling. One can search all of google and not find a single error in his old posts,,he was too anal concerning such as he preferred and liked to slap others for their typos and spelling. All of a sudden Gillinad returns and spells as bad as Lelnad and Geo on a regular basis?,,Not a chance,,,but I'll indulge ya' while you;re being congenial.

>mainly because the users of those modified

>radios have no clue as to how to "properly"

>operate such junk.

Sure,
on sideband one has to clarify another in,,,so what? As usual, we (meaning those of us actually clarifying others with our unlocked clarifiers) aren't the ones claiming a problem exists.....you are.

>You don't listen to the radio much, do you?

Depends, Sometimes,,,,I prefer talking and being heard..so, you;re right,,DXers usually get in and make their tag and get out,,and do more talking than listening. If we wanted to do more listening than talking we would play hamie radio.

>Instead of talking all the time, try listening for a
>while.

Yea,,I was gonna say the same thing to you concerning your error claiming all these problems with clarification on cb that doesn't exist....

_
Brings to light the tons of
problems you have with cb and those who use it in a manner not approved by yourself.

>Not by myself, Twist --

LOL..most certainly by yourself.

>a manner not approved by the law,

But you;re not the law,.... as much as you want to be in control,,,,you;re not! And you, not the law, are the only one complaining about cb and it's users. Take it a step further, and it's still not the law crying about cb,,it's round, red, hammies.

>rules which are intended to give everyone the

>same amount of spectrum and prevent others

>from screwing it up.

You can't possibly expect anyone to not howl at the hypcorisy you profess. You seriously can not reasonably expect those to follow the rules and etiquette YOU desire on the air while you act out on the net,,,different medium, same end result....communication. It reeks of hypocrisy.

What article was that? The one KC8LDO brought to this group for no other
reason than to attempt to incite flames? The article in Sporadic Waves
that KC8LDO stumbled and fumbled upon when he went searching the net on
anything he could find concerning my identity in order to incite flames
because he can not express himself properly and blames me? Ahh,,,I think
that is the article to which you refer, and it claims the exact
opposite,,as a matter of fact, it professes the benefits of the freeband
and focuses on a single frequency,,555,,as the only problem. Claiming
something that isn;t true won't make it so, no matter how many times you
repeat it.

>and certainly not according to what I hear on

>the radio. Give a listen sometime.

Which frequency? For all the searching you would have to do to find hate
and discontent on the freeband or bowl, one can automatically drop as
LEAST half a dozen hammie frequencies that are nothing but garbage.

For starters, the frequency tolerance defines the maximum deviation permitted from the assigned frequency, and the value of ï¿½0.005% is established by the FCC (95.625). Frequency -stability- describes the maximum amount of drift from the initial frequency during operation.

Your page says that the frequency stability of the Grant and Washington is 0.001%, or 274 Hz at 27.405 MHz. But notice that your page only shows specifications of maximum values, not values under typical operating conditions. If you have ever looked at a datasheet, you would know that maximums, minimums and typical values are usually very, very different. IOW, if your radio was working 1.37 kHz off freq (0.005% at 27.405 MHz), you would probably think it's broke! Same if your radio drifts 274 Hz while you are talking. That's some pretty piss-poor performance. The specifications on your page are MAXIMUM values, and are certainly NOT typical of these radios.

But just to emphasize my point, you should already know that the stability of the radio is only as good as the stability of the reference oscillator. If you have ever shopped around for crystals you would know that the stability of most mass-produced crystals are around 50 to 10 ppm (ï¿½0.0005 to ï¿½0.0001%, or up to ten times more stable than the stability specification of the Grant/Washington). Off-the-shelf temperature controlled crystal oscillators (TCXOs) typically have stabilities of around 5 to 1 ppm (ï¿½0.00005 to ï¿½0.00001%), and some as good as 0.1 ppm (ï¿½0.000001%), which, if used in a CB radio, would give a frequency stability of ï¿½0.274 Hz (at 27.405 MHz), and that's over a -30 to 75ï¿½C temperature spread! Ok, most CBs don't use those expensive rocks. But even if most of them use the industry standard then they are still much more stable than the specification for the Grant/Washington.

And to top it off, I have NEVER heard a properly functioning PLL-tuned radio drift anywhere near as much as 250+ Hz!

If all three radios have unlocked clarifiers then there is a much greater chance of such a situation occuring in the first place. OTOH, if these operators were really serious about their hobby (the reason most of them give when they get the mods done), then they should think about spending a couple bucks to get their channel freqs checked on a calibrated counter, and that way all three would be right on freq all the time and none of them would need an unlocked clarifier. That makes a lot more sense than butchering a radio because you don't understand the reasons behind the rules.

Wrong. It's because they have VCO's that cover continuous parts of spectrum, not a pre-assigned channel system intended for ultra-simple operation. If you want to operate like a ham then get a license -- it's not like the government doesn't already have a file on your paranoid ass. Just what is it you think the FCC can do to you that the FBI, CIA and IRS can't? Or are you just afraid of the code test?

Duh. I was pointing out that they are constantly readjusting their transmit
freqs in a service where the transmit freqs are intended to be fixed. Please
don't tell me you didn't understand that.

>Your posts are based on legal issues, not correct SSB operation.

Correct SSB operation on the Citizen's Band is by turning your channel selector
to the desired band, adjusting your unmodified clarifier for the best received
signal, and letting the other person or persons do the same. As long as everyone
is using the same transmit freq just like CB was intended, what could be
simpler? (Besides AM, that is.)

>You haven't really used a SSB radio have you? You sure don't sound like
>you have had any experience with them.

Just on the CB. You know, the "Citizen's Band". Not the freeloader band, not the hammie bands, but the Citizen's Band. Done lots of SSB on the CB. And it works really great when it's used as it was intended.

Constantly? I don't constantly change my transmit frequency, there has
been time I haven't touched for an hour. Its better than what you
propose, that every time someone new transmits that you have to hurry up
and change your clarifier.

So all CB's transmit on exactly the same frequency? Why do you need a
clarifier then?

Doing the Frankie Waltz whenever ther are more than 2 people talking.

Get yourself an intercom, then you wouldn't have to worry about locked
or unlocked clarifiers.

Come on Frank, because they have a VCO's (VFO's) that cover continous
parts of the spectrum is reason they can tune in a SSB signal correctly?
The frequency shift is smaller on a CB, but the The principle is the
exactly the same. Admit it, your wrong, you don't understand how to use
SSB. The rest of your post is a bunch of BS not even related to SSB
operation.

If you don't listen how do you know your "being heard"? Talking without listening is called broadcasting. Everyone talking at once and not listening is called stupidity. Talking and not listening is not how CB was intended to be, and it is certainly not what "DXing" is intended to be, and promoting that sort of operating is irresponsible and makes CB a worse place for everyone.

Another reason why Twistedhed should leave the group.

Clarifier is for fine tuning, same as RIT. But if everyone did transmit on
the same freq you would need no clarifier.

We also have RIT.....recieve incrimental tuning.

I used my Texas Star last night to talk to New Hampshire on
sideband from my mobile. I also used an HTX-420 to play with
some kids on FRS. Still keying, still clowning and having fun
on ALL the bands.

It looks like that someone put considerable effort into that site.
It's pretty funny, until you realize that it's just politikin gone
nuts.....

Is this dude Twisty that bad that he gets a site made about him? And
all the references about freebanding and illegal amps are pretty funny
too... I cant believe you hams dont have other stuff to worry about.

I guess I'm just new but every time i've visited this NG it looks like
the internet equivalent of a bunch of toothless local talkin mud-ducks
chewin on each others Cack and Balls....

Just my 2c....

Only YOU, Georgie-girl. And that's precisely what you attempt to do
here, in a CB newsgroup.

> 2. What could be more "discontented" than a group of outlaws who take it

> etc. do so?"

It doesn't take an amateur license to LISTEN to the crap on the ham
bands, Georgie-girl. All it takes is a receiver. Try using your brain
for something other than a seat cushion, just for once, would ya?

But Georgie-girl, "DXing" is not permitted on 11 meters, as you should
certainly know. But what would YOU know about it? You never used CB,
according to your own posts.

> Another reason why Twistedhed should leave the group.

Stupidity: Another reason why Georgie-girl should leave the group!

How the heck would you know? You state a lot of hooey but don't back
it up with anything substantial. For a "commercial broadacst engineer"
you don't know much, do ya?

"Many" does not equate to ALL. Dimbulb. And quite a few Swans were
mobile, back in their day. Now they're obsolete.

I bet you did it on a legal 10 meter frequency since you have your ham
ticket now.

>I also used an HTX-420 to play with some kids on FRS.

Probably was an emergency.

>Still keying, still clowning and having fun on ALL the bands.

You can't fool us Scott, you're operating legally and your keyclowning
days are over, it was clear when you posted the other day against
clipping limiters and how more efficient antennas were better than amps,
but,,,we understand you gotta keep up appearances on the NG with the old
gang. We won't tell ;)

read up on the entire industry. took a dump the last 2-3 years. we have so much capacity between here and euro its a buyers (users) market. believe me when i say that the amount of bandwidth laying dormant far exceeds what any salesman can sell for 4-6 years. by that time technology will replace 10 gb/s equipment for 40 or 80 gig and the glut goes on....

Excellent point! In addition to people on the superbowl not being
"DXers", DXingis not permitted on 11 meters.

>> Another reason why Twistedhed should leave the group.
>

For all the searching you would have to
do to find hate and discontent on the freeband or bowl,

>1. What could be more "hateful" than a bunch

>of people deliberately keying over one

>another, i.e. the object being to lock up other

>users receivers and prevent communication?

Well, that's only "part" of what I wrote,

>2. What could be more "discontented" than a

>group of outlaws who take it upon themselves

>to flaunt and ignore their country's laws

Who is flaunting? You inquire as to why one freebands or attends
keydowns and then cry because you don't like the answer and fail to
comprehend such. You then claim the response from your inquiry is
somehow "flaunting" the law. Your interpretation, as usual, us waning.

>by trespassing on frequencies that arent

>theirs?

How is your discontent on the internet and your malice and ill behavior
toward another, which is designed to inflame and harass, any different
from the ill behavior you speak of? Different medium, same
point...communication, and those who would seek to impede (according to
you) such communication. This is illustrative of WA3MOJ's continual
hypcoritical cry for censorship, is it not?

_
one can automatically drop as LEAST half a dozen hammie frequencies
that are nothing but garbage.

>3. Being a CBer/freebander as you are, how

>do you know what hammie frequencies sound

>like?

Attempted deflection noted.

> And if you are listening to dozens of hammie

>frequencies on a regular basis, we must ask

>the question "why would a person who has

>openly expressed his dislike of ham rules,

>restrictions, etc. do so?"

In the first place, I have expressed no dislike of hammie rules or restrictions with the exception of a certain DX rule and the use of a select few long abandoned frequencies. I have indeed claimed if one wishes to freeband, a license is the last thing one should attain. Your accusations and mudslinging claiming otherwise will not work. In the second place, your personal inquiries conerning any nuances I may or may not possess are off topic and indicative of your agenda to make your posts about me,,nothing more, Grow up and Hhppy 4th.

Hrm..

Penny... about all your thoughts are worth.. but moving to the real point...

Some of us who have been labeled as KeyClowns have been professing that since before we got our licenses... Others learned some when they got their licenses... Others yet haven't learned.

I guess my point is this: What's your point?

-SSB

31 teeth out of 32 and in the best shape I've ever been. Your 2 cent is
always welcome, however, there are those, such as wa3moj, that would
wish to censor such rights. Ironic he would profess his love for
censorship on Independence Day Weekend.
It's creepy in here at twilight.
–

Twisty, I have never tried to censor you let alone this weekend, you again
have me mistaken for someone else.
I havent replied to you in quite sometime. And if you actually read the
posts instead of slobbering on your tv screen
those anti twisty post i made were emailed to me to post. If you look I even
told you on more than 1 occasion that's what was happening.
But I understand, your medicine is running low.

It's not whether you want to operate like a Ham or not. It is more
like if you want to operate a radio whose design is such that it is of
limited use on a frequency sensitive mode such as SSB.

>right on freq all the time and none of them would need an unlocked clarifier.
>That makes a lot more sense than butchering a radio because you don't understand
>the reasons behind the rules.

I just snipped all your trash because you never did answer the
question. One thing you did say is relevant though. Begin quote:
"That makes a lot more sense than butchering a radio because you
don't understand the reasons behind the rules." End quote

I do understand the rules. The rule and only the rule is the reason
for a locked clarifier. From a practical standpoint one would never
lock TX and make SSB operation practically useless with more than
two parties.

****
Typical scenario - frequency difference per specs

Radio 0ne = 27,000,000 - 1350 - 270 = 26,998,380
Radio two = 27,000,000 + 1350 + 270 = 27,001,620
Radio three = 27,000,000
****
Best scenario = frequency difference per specs/10

Radio 0ne = 27,000,000 - 135 - 27 = 26,999,838
Radio two = 27,000,000 + 135 + 27 = 27,000,162
Radio three = 27,000,000

Gee Frank, even if you improve the radios specs by a factor of
ten radio number three still can't tune to both radios at the same
time. Those two radios are 324 hz off. Which is very hard on the ear.
****
You are officially buried. I'm planting the grass see now.

Not everyone listens to SSB the same, some like the pitch higher,
some lower. If you tie the RX and TX togethere, when someone
transmits and another station adjust the receive so the signal
sounds to his liking he will move his TX frequency. If you leave
the RX and TX seperate then you can tune the received signal to
your liking and the TX does not move, otherwish you wind up
chasing each other up and down the band. That is the purpose of
Incremental Tuning on receive.

Half a dozen frequencies out of the broad spectrum of frequencies
available to hams, and one can automatically drop EVERY cb channel
plus many many more frequencies outside the cb channels that
illegal operators use that are nothing but garbage.

>It doesn't take an amateur license to LISTEN to the crap on the ham
>bands, Georgie-girl. All it takes is a receiver. Try using your brain
>for something other than a seat cushion, just for once, would ya?

You missed the point, Clyde: If your butt-buddy hates the hammies so much, then why does he even bother listening? Everything he has ever said and done in this newsgroup supports my belief that he is insanely jealous of people who have enough integrity to use their real names in public, who don't have to camoflage themselves in anonymity, or hide behind the curtains of paranoid, anti-social, anti-government counter-culture because they can't exercise any self-control over their behaivior. So it's not suprising that he hates hammies so much

because they represent the antithesis of his own warped personality. That's my 'belief', but I'm sure you and he will try to put a different spin on it...

The clarifier mod is easier for the tech, but the jump switch is easier for the
operator to use. As a legal CB operator, if I was to recommend one over the
other, I have to recommend the jump switch because it's far less likely to cause
interfere to legal CBers.

>I suppose one can disable the PA ot some other function,

Because the jump switch centers you accurately between the channels.

Everything in this world can be compared to something else -- there are both similarities and differences between any two things. The similarity between a Swan 500 and a CB radio with an illegally modified clarifier is that both will tune TX and RX with a single knob. The difference is that only the Swan was intended to do so. Another difference is that the Swan was designed to tune a continuous spectrum while the CB was built for fixed channel operation. Are you starting to get the picture, Twist?

Who do you 'believe' I am -this- week, Twist? Why is it that when I said that I never retired from the USMC you believed it and even tried to use it against me, but when I say that I'm not a ham you just can't accept it? Is it that you hate those law-abiding hammies with such a passion that you automatically assume any other law-abiding radio operator must be a hammie to be hated? Or are you just dumb?

> telling us such problems exist on cb with unlocked
>clarifiers.....illustrating it's not the cbers that are having problems
>with our operation, but outsiders such as yourself...certainly, it may
>occur at times, but as usual, you cite the exception rather than the
>rule or norm.

But there IS a problem with interference on the channels that is caused directly by morons trying to operate between the channels with unlocked clarifiers. Does your radio still have the ability to receive on the legal channels? If so, listen in sometime and see just how many are 'sliding' into the bandwidth of the legal channels. It's easier with a spectrum analyzer, but maybe you are smart enough to figure out how to do it with your equipment (...or maybe not).

There's one point in your favor (even though it's the only point in your favor). Buy a radio that's already been modified and you are taking some big chances, because you don't know what monkey with a hacksaw and arc-welder did the mods.

>>And when working between channels, the

>only the best way, but the only way.

That's like saying you are going to drive off a cliff because everyone else is staying on the road. Ok, so you don't have cliffs in Florida, but you do have bridges. Either way, there are much better alternatives, such as getting your license and operating the way you want -legally-; or use a jump switch if you are too paranoid to speak your mind using your real name.

>>Not like illegal operators care if they interfere
>
>>with other channels anyway...
>
>
>
>See? You're assuming because a mod is done, it is done incorrectly.

No such assumption was made. My point was that anyone who disrespects the law enough to violate it can't be expected to respect people who operate legally.

>Holding with your train of thought, your courtesy on usenet is no better
>than those you speak of on the air.

You're kidding? My 2-watt empty-state Hallicrafter's was heard in Florida? Damn! Why didn't you tell me when that happened? That's too cool!

> Those that behave on the air like
>you do here, are referred by yourself to as "keyclowns"..,,,in here,
>your behavior is that of a lid. The golden rule....

Oh, ok, I see now that you didn't express yourself properly: When you said, "...your courtesy on usenet is no better than those you speak of on the air", what you really meant to say was, "...those bad radio operators to which I

refer", not that I was "on the air" talking about other people. That was a very good example of what is called a "communications deficit", Twisty. You should work on your grammatical construction a little harder if you ever want to realize your fantasy of being a professional journalist.

That suprises me, Twist -- you seem to know more about me than I do, such as all my aliases as hammies, my military service and discharge status, how many antennas I have on my roof, etc. I can't imagine that there is something that you DON'T know! And especially when we are discussing a topic that is allegedly in your field of expertise: illegal radio. Once again you have disappointed me, Twist.

>,,I'm not a gambling man...I leave that to Willie.

>hypocrisy.

What were you saying earlier about comparisons... like comparing a CB radio to a Swan 500... what about comparing usenet to radio? First, what are the similarities: They are both methods of communication. That's about it. The differences: The use of radio is regulated by the FCC under Federal law; Usenet is regulated by it's users. That's a very big difference, Twist. But I also understand that you hate the government and choose to ignore it's laws, so there probably isn't much difference to you between radio and usenet.

Wow, that's a long time without adjusting your freq! How can you keep your fingers away from the knob that long? I must be dead because I transmit from two radios, one AM and the other SSB, and I haven't changed the channel freqs for..., well, never. You still don't understand that when I said "constantly" it was in contrast to "never".

> Its better than what you
>propose, that every time someone new transmits that you have to hurry up

If everyone transmitted on the same freq (you know, just like the way CB was intended) then there wouldn't be a problem.

>So all CB's transmit on exactly the same frequency?

Most do transmit very close to the channel freq; assuming they haven't been modded or 'tweaked'.

> Why do you need a
>clarifier then?

Do you need a clarifier on AM? No, and that's because the transmit freqs are pretty darn close to begin with. The 'clarifier' is the modern version of the BFO, or Beat Frequency Oscillator, which is a circuit that reinserts the carrier that is missing from an SSB signal so it can be detected as audio, and is adjusted for no reason other than audio quality (hence the term 'clarifier', as it 'clarifies' the audio. And FYI, the term was adopted because a lot of CBers didn't know what a BFO was -- gee, go figure).

>Doing the Frankie Waltz whenever ther are more than 2 people talking.

Quit whining.

>Get yourself an intercom, then you wouldn't have to worry about locked
>or unlocked clarifiers.

Is that supposed to be some sort of mockery? Well, radio is only a very small slice of the communications pie. There are many other methods of wireless communication. Lasers are used extensively in data communications, and is the vehicle used in one hi-tech approach to eavesdropping. Or, for a more low-tech approach you could try smoke signals, carrier pigeons, semaphores, the postal service... all have been around much longer than CB radio. Ever watch those WWII movies with the ships blinking Morse code to each other with the lights? There you go. And while I'm on the subject of boats, check out this link to see a low-tech form of communication that's been around for centuries, is still in use, and is so reliable that it is required even today for the US Navy:

http://www.chinfo.navy.mil/navpalib/communications/flags/flags.html

But you are not limited to communicating over distance, because you can also communicate through time. Ever mark an appointment on a calendar? That's a form of time communication. There are many time-capsules around the world that are basically messages from the past. Or maybe that intercom isn't wireless at all, which is ok because landlines are much more reliable and have very little noise. Even better, fiber-optic communication is quickly becoming the most used form of 'wired' communcations, capable carrying more information in a small bundle than all of the radio transmitters in the world combined.

Then there's the crowd that want's big watts, swang, slide, more watts, extra channels, mods, more watts, big signals, higher modulation.... you keyclowns are a bunch of morons.

Take a look around the net at some older radios. You will see that many of them
had a BFO -switch-, not a knob. It wasn't adjustable at all, and audio quality
depended on the sensitivity of the tuning control, and the operator's ability to
tune it carefully.

> The frequency shift is smaller on a CB,

It's VERY small on a CB unless your CB needs some time in the shop.

> but the The principle is the
>exactly the same. Admit it, your wrong, you don't understand how to use

Considering that you didn't even know what the 'clarifier' is supposed to do
(even though the word itself is kind of a dead giveaway), maybe you should be
doing a little more listening and a little less whining.

"Limited use"? It's SUPPOSED to be limited -- it's limited to 12 watts PEP, and limited to the upper and lower sidebands of 40 fixed channels. And under those "limitations" a stock radio works just fine! If it didn't they wouldn't be designing them, building them, selling them and reselling them; and there wouldn't be zillions of people that are content to use them UNMODIFIED. Matter of fact, if they didn't work then the FCC probably wouldn't have allowed SSB on the CB in the first place, and they CERTAINLY wouldn't have written up the minimal standards and technical specifications of the mode into their regulations.

It was the FCC that made the rule about locked clarifiers, and they did so because the intent was to make the band easy to use. They DIDN'T make the rule to piss off the ham wannabes that don't have enough brains to get their license. Clarifiers are locked on CBs for a reason; understand the reason and you will realize that there is no reason to unlock them except for illegal use of the band. Ignore the reason and you are just making excuses, which is exactly what you are doing.

Your question was "Now tell me how three SSB CB radio operators can enjoy a conversation when one is low in frequency, one is high, and one is right on frequency?" You didn't say how high or low each operator is from center except to imply the maximum under the specifications you referenced. But your lack of understanding about technical specifications is the reason why you snipped my reply, most of which explained why maximum is not typical. Ever here of a thing called a "bell curve"? Obviously not.

> One thing you did say is relevant though.

Everything I said was relevant. You just refused to listen.

The clarifier is locked out of TX because the channel frequency is fixed, and therefore any adjustment of the TX freq is not needed. It's a really simple concept, Tnom, and I'm suprised that you can't understand it.

>**********
>Typical scenario - frequency difference per specs

Wrong, and you know it because you snipped it from my post: Maximum permissible frequency tolerance is NOT typical for tolerance OR stability.

>Radio 0ne = 27,000,000 - 1350 - 270 = 26,998,380
>Radio two = 27,000,000 + 1350 + 270 = 27,001,620
>Radio three = 27,000,000
>*********************************
>Best scenario = frequency difference per specs/10

Wrong again, since "best scenario" is when all three radios transmit on exactly
the same frequency, not an arbitrary 1/10 of maximum tolerance! Where the hell
do you get this crap -- Toll Free? Eitner?

>Radio 0ne = 27,000,000 - 135 - 27 = 26,999,838
>Radio two = 27,000,000 + 135 + 27 = 27,000,162

There are some crappy radios out there. That's why I recommend using
a amateur radio and then keeping your mouth shut. By the way amateur
radio design does not suffer from a FCC mandated and problematic
clarifier locking.

If your untie TX from your RX then also remove the eyes from
your transmit. You no longer have the ability to accurately steer
your TX to the ongoing conversation. This is why stock CB radios

are a problem on SSB.

Multiple radios with real world frequency differences would never be able to get the required frequency tolerance that SSB requires. 200 hz is to much to be off on SSB. 200hz represents .00074% tolerance/stability. It can not be obtained by a static radio. You must obtain it by creating a scenario that allows you to align on the fly.

Some people can't align themselves to a voice. Most people can. Most people can detect the extra unnatural harmonics in a SSB voice and tune those harmonics out. When done you ARE on frequency. The exact frequency is unimportant as long as you are on the same frequency in use. You should be able to detect a 50 hz difference in a SSB signal. If you can't then you should try another mode. SSB is not for you.

Well, let me re-word the question. What I'm trying to know is the following:
1. When a 10m radio is converted to 11 meter, does that takes the FM transmitting capabilities of the radio?
2. Is the 10m ham band on AM or FM or both?
3. If I have a 10m Super Star 3900 converted to 11m, with 6 bands of channels, will I be able to use the FM frequencies if I turn the knob from AM to FM?
4. Which is a better mode to transmit for cleaner signal and distance, FM or AM?
5. Are the frequency allocations in the freeband sector, for FM or AM mode or both?
6. I was told that if I transmit on AM, I get a dead key of 3 watts and then a swing of 175 watts, which I'm pushing out, but with FM, I get a dead key of 175 watts becaue there is no swing on FM, and it will put out the maximum amount of watts the amp puts out. Which one is true, or correct?

Anticipated thanks for your help with this matter, and I hope that one of you out there can help me clearify this small confussion.

Thanks.

Hello Bert:

A Happy and Safe Independence Day back to ya's, and your family.

The folks down the road will be shootin off all kinds of unsafe and insane fire works, (I can hear the boys warming up now) and have invited all the neighbors for a Big 4th of July BBQ and of corse Rock n Roll AND Country Western Music. Yep thats right we got both kinds.

Might just have too look over all the Honey's there and have a dance or two, yeah! Yahoooo!!!!

And iffins I get my beek way too deep in the Goon Juice, the kid can drive me back. But how does one look cool while riding in the back of a pick up truck ?!?!?!?!?!

Have a good one

Jay in the Great Mojave Desert, ... just down the road ah ways from the fillin station.

no, they're not all channelized.... most of them, in fact, have VFO's
with preset memory channels...

You should really do some better research before you open your mouth
and insert your foot.

Where in the 10M band?
28.000 to 28.300 is CW.
28.300-28.500 is mixed CW and Phone (USB)
28.500-29.000 is USB, PSK, SSTV, and other digital modes.
29.000-29.700 is usually FM and repeaters.

As always, CW is permitted across the entire band.

> 3. If I have a 10m Super Star 3900 converted to 11m, with 6 bands of
> channels, will I be able to use the FM frequencies if I turn the knob from
> AM to FM?
The FM and AM frequencies are the same, the mode changes, and that's
all. It's not legal to use FM on CB.

> 4. Which is a better mode to transmit for cleaner signal and distance, FM
> or AM?
Depends on conditions.

> 5. Are the frequency allocations in the freeband sector, for FM or AM mode
> or both?
The Freeband isn't allocated for CB or for freebanding.. it's
allocated to other services. In general, however, freebanders use
sideband modes above channel 40, and AM below 1. Don't make it legal,
but that's what's done.

> 6. I was told that if I transmit on AM, I get a dead key of 3 watts and

Both. But if you're keying 3 and swinging 175 on AM, you're not doing
it right, and your signal will be distorted, raspy, and will most
likely bleed over a megahertz... at least. FM modulates the frequency,
not the amplitude, so whatever the radio puts out max, is what it puts
out.

>channels, will I be able to use the FM frequencies if I turn the knob from
>AM to FM?
Yes but not many others have FM, and you wouldn't want to use FM on a
channel if that channel is already in use with AM.
>4. Which is a better mode to transmit for cleaner signal and distance, FM
>or AM?
SSB ....But if you must FM for a clean local signal and AM for
distance.
>5. Are the frequency allocations in the freeband sector, for FM or AM mode
>or both?
Freeband is a free for all. It just depends if you want to be rude and
use FM on a already in use channel. SSB is the most common mode for
freeband.
>6. I was told that if I transmit on AM, I get a dead key of 3 watts and

>key of 175 watts becaue there is no swing on FM, and it will put out the
>maximum amount of watts the amp puts out. Which one is true, or correct?
Both if you have your AM set up that way. Normally your AM carrier
would be around 50 watts but the transmitter can be made to operate
the way you described.

Really? A clarifier is a modern BFO?

Guess again Frank, A clarifier does not insert a carrier.
Maybe you better get a better understanding of radio before
you make your incorrect posts. And FYI, you don't know the
difference between a clarifier and a BFO -- gee, go figure.

Stick to intercoms, you probaly have enough knowledge to use
them. At least they don't have clarifiers or BFO's to
confuse you.

Your reasoning is leaving out one very important factor. This factor
makes your reasoning flawed.

You stated "TX does not move". If this was true then your reasoning
is just fine, but TX DOES MOVE. It will move from temperature
differences within one radio. It will move from some instability in
one radio. It will move when measured from one radio to another radio.
It will move after a radio gets older. It will move with a perfectly
brand new, perfectly adjusted radio.

It is hard on the ear to listen to a radio that is off 200hz on SSB.
There is no way to align multiple radios within 200hz if you can't
use your own ears to align your transmit. If RX and TX are one,
and if you have a good ear you will automatically align TX with your
own ear.

Even amateur radios do not contain the frequency accuracy needed
for multiple convergence upon a frequency. The exception would be
more advanced radios that contain a crystal oven. Most all radios do
not have that kind of accuracy.

Sure they do, but if you want to taylor the voice to your liking,
then you need to be able to tune the RX independent of the TX.
Marine and other similar communications are usually rather short
transmissions, whereas on the ham or cb bands you may be in a
contact for quite a while and listening to SSB that dosen't sound
quite to your liking can be tiresome.

And moving slightly off the frequency does not change the pitch of
a signal like it does on SSB.

OK, so I readjust so the received sounds like I like it, maybe a
bit higher in pitch, now I have just moved the TX freq as well and
now the other stations complain that I am off frequency. If they
readjust so I sound correct to them, then they move their TX
frequency and now they don't sound correct to me, so I readjust my
receive frequency, which again moves my TX frequency and here we
go again, chasing each other all over the band.
If every one leaves the transmit frequency alone and adjusts the
"clairifier" to make the received signal sound like they want it,
then everyone stays put as far as transmit.

OK, done laughing now,,,hams with modern radios just tune the dial to a frequency, say 7.288, and just leave it there while chatting with dozens of others who have "multiply converged" on that same frequency. There is no guesswork about what frequency because it is traditional to round off the frequency to the nearest whole number, i.e. 7288.00 and not 7287.32 or some uneven number. Once there, no one has to make crucial VFO, RIT or XIT adjustments for each voice. And they are not using crystal ovens either, LOL (!).

Along the same lines, when using my Collins separate transmitter and receiver, they are slaved together in transceive mode. When I come up on frequency, since the Collins does not have digital frequency readout, I adjust the received signal to my liking. Now when I transmit, the other station/s might tell me I am a little low, or a little high, so I readjust, then separate the transmit and receive so I am no longer in transceive mode and I can adjust the received frequency to my liking and my transmit stays put. Same principle when using a "clairifier".

As long as the signals sound fine to you, then that is great, but
if you wish to adjust the received signal a bit, as I said before,
not everyone likes to hear SSB with the same pitch, then using the
RIT does not make one a bonehead.
This never was a problem in the early days of SSB use as everyone
was using a seperate transmitter and receiver. Then came along the
transceiver where RX and TX were locked together, and hams started
chasing each other around the band because some ops would readjust

on receive which would move the TX as well. THAT is why RIT was
invented, to ememinate that problem. Nothing bonehead about it.

I agree JJ, modern marine SSB radios come with clarifiers for just the purpose you described. Their owners do not feel the need to mod them to be "unlocked".

Don't even try to argue with him JJ. He is working with a flawed, keyclown-type understanding of HF SSB operation. This understanding is probably based on his experience using screwdrivered radios on "freeband".

Frank summed it up best:

"Clarifiers are locked on CBs for a reason; understand the reason and you will realize that there is no reason to unlock them except for illegal use of the band. Ignore the reason and you are just making excuses, which is exactly what you are doing."

Amen.

I totally agree.

Hey JJ I think you misunderstood. We're not talking about RIT. We're
talking about a screwey mod keyclowns do which locks the RIT/XIT
together. Keyclowns (of which Tnom is one) are saying they must "open"

or "unlock" their RIT's to enable them to XIT, or "slide" around and adjust thier transmit frequency: which is boneheaded, illegal, and creates confusion when more than one station is involved in a conversation.

Thanks for the info. If you don't mind, I also heard about converting a 2m ham radio so it can access the MURS frequencies, but this radio is a mobile, since they don't make it yet.

However, I was wondering, how wide would be the frequency range of a 2m radio once it is converted? Would it only access frequencies in the 2m and MURS or would it access some of the other frequencies around that sector that are assigned to companies and else, but also some of them are empty sort of like the freebands?

> Yes but not many others have FM, and you wouldn't want to use FM on a channel if that channel is already in use with AM.

Does it affects the AM frequency and transmission of others in the channel who are using AM if I use FM?

> >5. Are the frequency allocations in the freeband sector, for FM or AM mode r both?
> Freeband is a free for all. It just depends if you want to be rude and use FM on a already in use channel. SSB is the most common mode for freeband.

Why would it be rude to use FM on freeband, and would the SSB work with the FM?

No, it's called Censorship. If Georgie-girl doesn't like what he reads
then HE should practice self-censorship and "voluntarily leave". And
good riddance to bad rubbish. Too bad the hams won't talk to him.

Typical mindless drivel but what can we expect from "JJ", who still thinks the 9/11 hijackers were "heroes"?.

Given that there are MANY more CBers than hams and that CBers are, for the most part, crammed into less than One Megahertz while fewer than 3/4ths of a million hams have 15% of the HF spectrum between 3 and 30 MHz, exactly what do you expect "JJ"? Sure, it SOUNDS bad, but the hams can spread it out a lot more. Thus, it doesn't sound quite so bad.

But when ANY licensed ham breaks a law you cover it up. Let's talk about WE8E, an EXTRA from near Cleveland, who was recently fined $12k for playing music in the CW portion of the 40m band and jamming the Trans-Provincial Net on a regular basis, shall we? You didn't laugh about it. Jerry Ox didn't laugh about it. Even Georgie-girl didn;t laugh about it. Wonder why?

I'll tell ya why: He was a ham, not a CBer. Talk about hypocrits!

You display your ignorance again, Frankie-boy. No two radios are
exactly tuned the same, and on SSB you could have a considerable
variance and still be within legal tolerances. But then, you've never
actually used a CB radio, have you?

> >You haven't really used a SSB radio have you? You sure don't sound like

Can't you have fun without breaking the law?

And besides, you don't seem to know or care what frequencies are ham (10M, 2M) and public service (VHF) frequencies. You can't just transmit wherever you want in the name of "fun".

You are assuming that every ones transmit frequency is the same.
This is never the case. Now answer this simple question.

If all transmits are off and no one has the ability to adjust them
then how in the heck can multiple radios tune in to each other?

You are avoiding the truth. Take your Collins and put it in a mobile.
It will no only change with a vibration here or there but if you leave
it in the car on a hot afternoon then what? Wait? How about overnight
in the cold? Wait? Any one that believes a non oven controlled radio
will not drift is ignorant of the truth. One only has to drift about
200hz to become a problem on SSB. Does your Collins have .00074 %
accuracy? Cause that is what you would need to operate it with a
fixed transmit.

>either, LOL (!).

Do these hams operate their radios at 120 degrees? Do they try it a 10
degrees? You don't know what you are talking about because you can't
look beyond the end of your nose. If they didn't have the ability to
adjust their transmit then they would have the same problem as a CB
does.

You assume that all radio operation is done with a radio that has
warmed up, is in a room at 72 degrees, and is adjusted by the same
technician with the same frequency standard.

That is a very very stupid assumption. exactly what one might expect
from such a short sighted person as yourself.

> MHz, exactly what do you expect "JJ"? Sure, it SOUNDS bad, but the
> hams can spread it out a lot more. Thus, it doesn't sound quite so
> bad.

Give the cbers any amount of frequency spectrum and it will sound
just the same as cb does now. It seems to be the quest of cbers to
turn any piece of radio spectrum into a sewer pit of radio
splatter. You are one of the biggest contributors.

>
> But when ANY licensed ham breaks a law you cover it up.

Oh? Just how have I ever covered up any ham who breaks the law?
You off those meds again? Any ham who breaks the law deserves to
be caught and deserves what ever he gets.

> Let's talk
> about WE8E, an EXTRA from near Cleveland, who was recently fined $12k

Do you mean accuracy as in frequency readout accuracy or do you
mean stability as in frequency stability? You need to learn the
difference between the two before you start posting questions on
the subject and reveling yourself for the fool you seem to be.

>Cause that is what you would need to operate it with a
> fixed transmit.

BS. Now I understand why you are on cb.

Mercy you are dense, and your question doesn't even make sense.
How can someone else adjust MY transmit? I may have to adjust it
initially, but once I am on frequency I never touch it again. If I
don't like how the other station sounds, I adjust the receiver and
the transmit frequency stays put, period.

You kin to dickiebird by chance?

Are you telling me they all change their transmit frequency each
time they transmit?

But even with all stations right on frequency, with RIT I can tune the received signals to my liking without moving my TX frequency. That is the whole purpose of RIT, so I can tune the signals to my liking and no one has to retune me because my transmit frequency stays where it is. What is so hard to understand about that?

But when you tune in to the net, just how do you know you are
exactly on everyone else's frequency? I all depends on how you are
tuning the received signals to your ear. You may think SSB sounds
"natural" when you are in fact tuned a little a few cycles high or
low.

If you are running a piece of Swan ham gear, you certainly don't
stay on one transmit frequency, it moves every time you key up.

Duh.....I'll try to explain this to you one more time, I will type
v e r y s l o w l y so maybe you can comprehend.
When I tune in an SSB station initially I tune it for how it
sounds best to me. Now there may be several stations on the
frequency with the new whiz bang rice boxes with digital readouts
and they can all set their frequency for exactly x.xxxxx or
whatever, and with the accuracy of today's PLL circuits they will
almost certainly be right on each others frequency. I can read the
Collins analog dial pretty well to an accuracy of less than 500
Hz. When I tune the signals for how they sound best to me, it may
not be exactly on their frequency. When I transmit, if I am a
little off, I may be asked to come up or down a few Hz, which I
do. Then I take the RX and TX out of transceive mode and I can
then tune the received stations to my liking and my transmit
frequency never changes after that and everybody is happy.
Also these whiz bang rice boxes have the capability of tuning the
receiver separate from the transmit for just the same purpose, so
the operator can tune the received station to his liking without
moving the transmit frequency.
Try this, tune in an SSB signal like you think it should sound,
then have five other people listen to it and four out of the five
will readjust it plus or minus a few Hz to make it sound better to
them.
It is really very simple, too bad in seems to be beyond you. Must
be some of that stuff you forgot.

You are assuming that everyone's transmit and receive frequency are the
same. This is not often the case with butchered CBs. The shops that do the
work often do not properly align them.

Because your receive may not be the same as your transmit. You adjust your butchered radio to where they sound better, and again, you are off frequency. All that is required is, for the clarifier to stay locked, and those with off frequency radios to have them repaired. For you to lock your transmit and receive together is ridiculous, unless the radio is similar to a 2510, where you have both a VFO and an RIT built in. In this case, you have the option of using the VFO if needed to get to someone that is off, or to use the RIT to receive someone a little off from all the other locked radios.

A break through.....You actually admit that my point is valid
as long as the radio is not butchered. I agree. One way to assure
that doesn't happen is to keep the radio out of your hands.

You're wasting your time on this guy JJ. What he he knows he learned
from a bunch of dopes on freeband running butchered "export" radios
trying to tune each other in.

aaaaaw! whats the matter little boy? you get spanked again?

The fact is, I can work anyplace I want within the part 97 rules and the bands I am authorised on (6 meters and up). I have to worry a little about power output, but thats not much of a problem considering. Still, I worked a place on 6 you couldn't get to on 11 meters.

Oh yeah, aren't you the one thats been spam flooding the various rec.radio.* groups lately (seem to see your name in there a lot).

besides, if you can't run with the big dogs, don't get off the porch!

say that again?
I know for a fact that those channels below 26965 are still in use in many
areas of the country. wlwg 700 cincinnatti still uses FM remote pickups
down there in the 26.210 regime (I pick them up fairly often on the
shortwave and have to slope detect them because they are narrowband FM).

abandoned? that isn't what the fcc frequency database has to say. they are
still allocated and still protected, even if they are not in wide use.

excuse me, what to vegetables/fruits have to really do with the
application of rules and regulations with regard to operation of a station
IN THE US? if you didn't get my meaning that time, then you need to reread
the originating statement that lead me to ask why a comparison of apples
and tomatoes was relivant (let alone apples and oranges which are both
fruits).
this point is moot anyway.

>
> If you want to show me where in the FCC rules it governs foreign

Why don't you check the treaties that the US has with many other countries
(its all in the ITU rules). why do you think that most places have similar
allocations of space on the HF bands? The FCC is strictly a US agency and
thats where I was addressing my comments.

small problem with that. I don;t have any equipment to go there, so how
would I know thats its strictly a problem in my back yard? I only have
your word on it, and so far, you haven't exactly proven yourself to be
trustworthy, now have you?

No one should come up on frequency with the RIT on, they should
get on frequency first, then use the RIT if they need to to adjust
the received signals. And the others on frequency can't tell if
you are using RIT unless you tell them, because RIT doesn't change
the transmit frequency.

Exactly. Lets suppose a net meets at 7.160, and assume that
everyone has the latest junkpan ricebox transceiver with the
superduper digital readout, including me. Now is there anyone here
who believes that if everyone sets their frequency to exactly
7.160000 on their readout that everyone is exactly on 7.160000?
Muck probably does, but the truth is there will be some
transceivers that will actually be a few cycles high or low. But
lets assume that they are all accurate. I come up on the net and
set my frequency to 7.160000 as well, so I am now exactly on
everyone else's frequency. Now all stations sound the same,
perfectly readable, but not quite to my liking. Since I am going
to be sitting here for several hours listening to these
communications I would prefer to adjust the receive frequency a
bit so the sound of these SSB signals are more comfortable to my
listening. So, just reach over and tweak the vfo a bit, right?
Well that solves my problem but now I have just moved my transmit
frequency and now I am off frequency to everyone else on the net.
Now are 30 other stations going to change frequency just because I
did? You know the answer. The solution is simply I turn on the RIT
(clairifier for the cbers), or maybe even punch up the other vfo
for receive mode only in my whizbang ricebox, and adjust my
receive frequency so the signals sound "natural" to me and my
transmit stays put and everybody is happy.
For those who think TX and RX should always stayed tied together,
maybe fine for them, but not for everybody.
For muck...I set the KWM-2 for zero beat on WWV (15 mHz) this
morning after a 10 minute warm-up. Over eight hours later it is
still zero beat. Is that stable enough for you?

well, the assumption was more along the lines of whatever level of ham
ticket you get (tech, tech+, general, advanced or extra). the general and
above get you all hf and the advanced and extra classes get you more of
that HF spectrum.

I have a lot of friends here locally that moved up to ham before I did,
and I still "chew the fat" with some of them on a near weekly basis. a lot
of them have moved away or died off over the last 10 years. Still, it
would be nice to hear some new voices on the air from time to time..

My opinion about unlocked clarifiers is that CB radios are made in third world countries that do not actually tune radios TX and RX to be on frequency. They just make sure the the test points show the values the manufacturer specifies.

Most manufacturers in Singapore, Taiwan, P.I. and China run the radios through their Test Equipment and align radios through Voltage and Amperage readings. Not through actual "ON-AIR" checks like Amateurs do (who actually do both).

And being that the electronic micro-miniature parts (i.e rectifiers, resistors, electrolitic caps, etc.) might be advertised at a certain value, how accurate do the manufactures of the radios think those parts are? The tolerances can be off just a little to affect the operation of TX on SSB. No radio is made the same and perform the same.

So to "assume" that the radio is on frequency from the manufacturer both TX and RX is doing nothing but fooling yourself. To unlock a clarifier is to better the RX of the signal in-bound and to TX on the exact frequency out-bound.

Compaq 5315KS with the following:
Windows XP
1.3 GHz Athlon
512 MB
80 Gig hard Drive UltraDMA
12x CD/DVD Rom Drive
12x CD/CDR/CDR-W CD Rom Drive
56k v90 Modem
3.5" Floppy Drive
10/100 ethernet
Keyboard
Labtec Speakers (Amplified)
4 USB ports (Two up front)
All updates for XP kept up and any Compaq Softpaqs.

Really nice setup with box and all original that came with it,also
have KDS X (eXtreme) Flat Monitor

Asking $650 Best offer or might sell without monitor.Rather it be
close to Maine - shipping is buyers

Might consider partial trades for 10 meter rigs with AM/SSB
(Kenwood,etc.) or mobile scanner on the higher end - no junk this
isnt.

For those that didn't want to wait for warmup, a lot of Collin's gear had a
quick-start feature that would keep the tubes hot when the radio was off. And a
warmup period isn't needed for most semiconductor equipment, just tube gear.

You are right, it IS a simple concept: "transmit on the exact frequency out-bound", which is the basic concept behind the channelizing the CB; and "better the RX of the signal in-bound", which is exactly what a clarifier does -regardless- of whether it's locked out of TX or not. YOUR problem is your inability to understand that the typical TX freq of a properly working CB radio is so close to the target freq that any difference is unimportant, -despite- your attempt to spin the specifications into a worst-case scenario. And do you know why you don't understand that, Tnom? Because you refuse to listen to the facts, like when you snipped two of my posts that explained that very issue.

Well, let me clue you in, Tnom. A while back I experimented with a Vackaar VCO. It was nothing more than an unshielded 6C4 mounted on a piece of particle board. With one tank, frequency drift is less than 2 Hz at 300 KHz. If I shield the tube, swap the tank, and cover the varicap with a box to block air currents, that puppy will run up to 44 MHz with less than 19 Hz drift! And remember that this is just a 'breadboarded', single-tube oscillator with an unregulated power supply!

Now go profess your ignorance somewhere else.

You have to be kidding. "Exact frequency"? Since when is a CB radio
on the exact frequency? Don't answer that it should be, just see if
you can answer that they are.

In other words are all the existing stock CB radios in the real world
on the exact frequency?

I'l be waiting for your answer. You can give the answer in the
percentage of stock CB radios that are aligned within 200hz and stay
aligned from 10 degrees to 120 degrees. See if you can answer it with
__% only.................We don't need your tangential avoidance of
the question.

So why do you need a clarifier?

I can't imagine checking into a 100 station net with everyones
transmit frequency being different.

Does your stereo have treble and bass controls? They do? Why
should the manufacturer go to the expense of adding these
controls? You should be happy just listening to music with
whatever bass and treble the manufacturer might choose to set. If
you can't then you should not listen to music.

To shift the RECEIVE frequency only slightly to account for transmit and
receive misalignment.

Really? Are you serious? I thought they inserted a carrier like
Frank said. Silly me for listening to Frank.

Frank just said that a properly working CB is so close to the target
frequency you don't need one. Duh!!

Thats true, you try to make there voice sound as natural as possible.
it just takes practice. But it would be worse to have a 100 stations
all using their RIT, rather than trying to get on frequency. Without
using their RIT, they are usually close enough that you can understand
them without retuning. You can usually tell when someone comes on
that is using their RIT, because you end up retuning for them.

344. New CB for Surburban

Newsgroup: rec.radio.cb
Date: 2003-07-05 17:25:46 UTC
From: johnscoke@aol.comspamnot
Message-ID: <20030705132546.26178.00000153@mb-m16.aol.com>
Source record: 161866

I would like to get a CB radio to use in my 2002 Suburban, primarily for trips to the Colorado river (CA/AZ) and to have in the boat. I've always heard that Cobra radios are good choices. I've read some of the suggestions in other posts here and realize that there is a lot of experience on this message board. Can anyone offer any advice on the following:

Handheld for the boat or for hiking
Good radio for the Suburban that will look good when mounted
Antenna mount for the Suburban

Many thanks

Are you saying that a frequency offset of 20 Hz is significant? How about 2 Hz?
Or 0.002 Hz? Did you find out what a "bell curve" is yet?

> In other words are all the existing stock CB radios in the real world
>on the exact frequency?

Most are close enough to work as they were intended. Why is that a problem for
you?

>I'l be waiting for your answer. You can give the answer in the
>percentage of stock CB radios that are aligned within 200hz and stay
>aligned from 10 degrees to 120 degrees. See if you can answer it with
>__% only.................We don't need your tangential avoidance of
>the question.

Why don't you give the percentage of radios that drift 0.005%? Oh, that's right, you said that was "typical" performance. So what is 'typical'? 90%? 70%? 50%? Just for kicks I took four CBs off the shelf -- 2 GEs and 2 Roadtalkers, all of them SSB models -- and hooked them up to the freq counter. One of the Roadtalkers measured 27.40503 (off by 30-40 Hz), the other three measured 27.40500 (less than 10 Hz). BTW, the counter has no 10's digit unless I switch to a scale that overloads, but I think it's close enough, don't you? Probably not. You won't be satisfied unless every radio is off by 0.005%. Well, good luck finding them. I recommend stopping at yard sales and thrift stores, and look for those old crystal jobs because the crystals are getting pretty old by now and should have enough drift to meet your "typical" specifications.

>Frank said. Silly me for listening to Frank.

Wrong. I said a BFO reinserts a carrier. Most CB PLL designs shift the RX freq
at the PLL (local oscillator to the first mixer) and use a product detector. The
effect is the same, and many PLL 'clarifiers' on shortwave and ham radios are
called BFO's out of tradition and familiarity, despite the fact that they aren't
true BFO's.

>Frank just said that a properly working CB is so close to the target
>frequency you don't need one. Duh!!

Wrong. I said that a properly working CB is close enough to the channel
frequency that you don't need to shift the TX freq. To answer your previous
question, "So why do you need a clarifier?", many times you don't. Often I can
listen to 39 USB all day and not need to touch the clarifier, with very few

transmissions sounding a bit off-freq. The ones that are -really- off freq are the keyclowns that unlock their clarifiers and can't set them back to the channel frequency.

Now, is there anything else I said that you want to misquote?

Forget CB. Use FRS radios. Compared to handheld CBs they are smaller and lighter, have less interference and better range, and use up fewer batteries.

>Good radio for the Suburban that will look good when mounted

Take your pick, but whatever you get it will sound better with an external speaker.

>Antenna mount for the Suburban

A 9-foot stainless-steel whip mounted on the rear bumper. And DON'T use foam coax!

Correction: make that "has no 1's digit". And that was measured in AM. Should I measure more radios? How about AM-only radios with PLL's? Or measure the SSB radios with a single-tone modulation? If you can wait until Monday I have a recently calibrated 10-digit counter at the shop. Do you think you will get your 0.005% with the same radios on a different counter (knowing that I calibrated this one from the one at the shop)? Do YOU have a frequency counter? How about checking some radios yourself and seeing just how far they really are from the channel freq? Oh, and don't forget to disconnect the mic so modulation doesn't screw up your readings, because if you want to prove your point you need to be accurate, right?

exactly the point JJ imagine if you had a open clarifier you have to tune
up to 3.8985 to hear me, that in turn changes your TX freq, so the other guy
who is listening to you now has to change to hear me and you.

And don't forget that most radios don't track Rx and Tx frequencies with the
kind of "exact" precision that Tnom says you need from your PLL in order to make
SSB work with a locked clarifier. Or that the human ear doesn't work with that
same "exact" precision, either.

Holy Moly. Where did you get THAT bit of info? Was it written on the
men's room wall at a keydown?

> Plus you are ignoring all the
> other factors that cause frequency differences between radios.

Yeah yeah so you say, heat, vibration, etc. What about airline
companies, the FAA, international maritime operations, and the military?
They all use SSB on HF and they all are able to "net" on a given
frequency.

Do you think all their HF SSB radios have crystal ovens (LOL) or are
some special design?

I submit that CB freebanders clip their clarifiers for the same reason
they clip their mod limiters: because they think they are hot-rodding
the radio to get a bit of something "extra". When in fact all they are

doing is making a perfectly good radio into a distorted, off-frequency
piece of trash.

He's never heard of heterodyning, which is about three decades ahead of current keyclown technology. But just for kicks, let's see just what happens with his theory when applied to cell-phone freqs: If 27 MHz drifts 1350 Hz, then 864 MHz will drift 32 times as much, or 43.200 KHz -- damn, that's almost in the next county! Hey Tnom, how do they make cell-phones work with that much drift?

I think they do it because someone -told them- that the mods would hot-rod the radio; and, being ignorant of the basic concepts of radio technology, they were gullible enough to believe it.

> When in fact all they are
>doing is making a perfectly good radio into a distorted, off-frequency
>piece of trash.

"Piece of trash" is a very good term because very few radios can be restored back to original condition after these keyclowns do their CB magic.

>Clarifier's are not modern versions of BFO's

I can almost understand how you misread my statement, but only because I have
taught a few electronics classes and some of my students were very, very dumb.
So I tried to put it in terms that you would understand. Obviously you need a
lesson on the subject:

The BFO is a signal source that provides a carrier to a SSB (or DSB) signal at
an IF stage so that it can be detected like an AM signal. The reason for this is
because the SSB signal has no carrier, and an AM detector will not work without
a carrier present in the signal. In the past, the BFO was a circuit seperate
from the rest of the receiver chain. Sometimes the frequency of the BFO could be
adjusted to improve the accuracy of audio reproduction, but some were fixed in
frequency and were controlled only by a switch, forcing the operator to use the
main tuning to match the sideband to the new carrier. In modern PLL radios, the
function of the BFO is performed by reinserting a signal from the VCO of the
synthesizer, which could also be a fixed frequency, but is more commonly
adjustable by adjusting the frequency of the VCO, a much easier method than
using a seperate oscillator (a BFO 'proper'). It can also be accomplished by
shifting the frequency of the local oscillator (the VCO as it serves as the
local oscillator to the first mixer), and using a product detector instead of an

AM detector. There are yet other methods, but those are the most common. Now since the basic concepts and functions of all these methods are identical, the term 'BFO' is still used to denote that adjustment (or switch) that makes the reception of SSB possible. The word 'clarifier' is a term that is used almost exclusively in CB radio to describe the adjustable part of a BFO (or it's functional equivalent), as CB radio was meant to be easily used by non-technical operators, and it was thought that when the uninitiated operator hears a distorted SSB signal for the very first time, the term 'clarifier' would be a label that more intuitively describes the function of the control that 'clarifies' the audio.

Now which do you prefer -- the long version as just described, or the short version where I said, "The 'clarifier' is the modern version of the BFO"?

Can you expand on this, uh, "frequency versus drift" formula? It may be a genuine CB Myth (and we're always looking to add new CB Myths to our collection) or it may be you've just misunderstood something in your radio theory book.

Steven,

I'm sure others will have good advice for the Suburban, but don't expect much range at all from an 11 meter handheld. Both antenna and ground are far too inefficient. That leaves you a choice of FRS or MURS. You may get a mile or so with FRS and will get more from MURS.

Particularly if you're going into that kind of nowhereville, your first priority is a CB that can be heard well - whether it's pretty or not! I suggest Cobra's 29 NW ST - a trucker-grade full-size CB; find one at your nearest truck stop. And, while you're there, get a trucker-grade antenna; it will be 4-5' high; you just can't get out on anything shorter.

This is simple. The reference oscillator is the main culprit for
frequency drift. In most all modern radios this reference is
digitally multiplexed to gain the different bands that are used in
a amateur radio. If a 80 meter SSB signal is out of tune 100hz then
a 40 meter signal will be out of tune 200hz because the reference
signal has been multiplied by a factor of two to get to this new band.

So on and so forth.....If 80meters is100hz then 40meters = 200hz,
20meters = 400hz, 10meters = 800hz

This concept if extremely basic. I am surprised that such a
experienced and knowledgable person as yourself had to ask?

Tied radios track much better than non tied radios. This fact can't be
denied.

If you can't tune any ones voice within 50hz then you need to use
another mode. Some people are tone deaf. They/you shouldn't operate
SSB just as a blind person shouldn't drive a car. That's life!

Not so, but they do need the capability to adjust to the frequency,
and they need to be able to do this with vision (Tied RX feedback)
Stock CBs do not have this ability.

No kiddin on CB your supposed to transmit on channelized frequency, not in
between or whichever freq you decide to set your open clarifier to.

I really don't think this guy has even a basic understanding
of PLL designs.

Even my oldest radio has oscillators for each band. My most modern has PLL
oscillators for four banks of the HF spectrum. Its reference is 36 mHz
divided by 4. That reference is never "MULTIPLEXED" just injected.

Maybe his theory was multiplexed. Huh?

snip

Gee..... The occurrence of frequency inaccuracy going up in a
linear scale as the frequency is raised is exactly what happens
in digital multiplexed (multiplied) radios. A TS-940 is a common
example of this occurrence. If you measure the accuracy of this
radio at 3mhz to a known frequency standard and you determine
you are off by 20hz then you with automatically mathematically be
off 40hz at 6mhz. Digital multiplication will not lie.

snip

I really shouldn't have to explain the english language but some
may need to be reminded that words can have multiple
meanings depending on how they are used.

The term "digital multiplex" is not the same as the term "multiplex"
just as the term "digital photography" is not the same as
"photography"

But knit picking is always knit picking.

This Tnom guy must have forgotten a lot because he has lost me altogether.

His initial argument seemed to be "CBers need RIT/XIT tied together so we can compensate for our radios being off frequency".

When it was pointed out to him that a majority of stock CB's are not off frequency by any significant amount, he then claimed temperature & vibration induced "drift" as an excuse.

When he was given HF ham examples of the proper use of RIT in net operations, he claimed frequency multiplexing in the local oscillator creating excessive drift at 27 mhz as the compelling reason CBers need to tie their RIT/XIT together.

I wish he'd just admit that he wants his clarifier unlocked so he can slide around in between CB channels like an illegal keyclown dope and leave it at that.

>Clarifiers and BFO's are NOT the same thing no matter how you try to
>spin it.

Ok, ok, I forgot, you can't understand anything unless it's explained to you on a 1st grade level. So let's do it this way:

"The 'clarifier' is the modern version of the BFO."

"Clarifiers and BFO's are... the same thing."

Those are two different statements, "no matter how you try to spin it". And you are also forgetting the rest of my statement, "...the BFO, or Beat Frequency Oscillator, which is a circuit that reinserts the carrier that is missing from an SSB signal", which apparently is TOO clear for you to understand. The facts are that both methods reinsert the carrier, and that a clarifier performs the same function as a BFO adjustment. My statement was accurate.

Now are you done trying to manufacture errors that don't exist? Because if not and want to act like Twisty, I can treat you like Twisty.

Just how far off frequency do they transmit "most of the time"? Just a few Hz?
1350 Hz? How about putting up some real-world figures, Tnom? Are they so far off
freq "most of the time" to justify unlocking the clarifier? I don't think so,
neither does the FCC, and neither does gazillions of satisfied legal operators.
And if they are that far off freq, why not just return the radio for one that is
more accurate? Or take it to the shop to be properly aligned instead of
butchered? Are these unrealistic options, Tnom?

Wrong. In most all modern radios (using a digital PLL), the synthesized freq is divided down to meet the reference oscillator and correction made through a phase detector. Therefore, the accuracy is equal to that of the reference oscillator plus or minus one bit on the divider. In your example that would be 100 Hz -regardless- of the synthed frequency. And if the synthed freq is an IF, heterodyning it up to a higher freq will lose no accuracy provided the LO is solid (usually supplied from a crystal oscillator).

>So on and so forth.....If 80meters is100hz then 40meters = 200hz,
>20meters = 400hz, 10meters = 800hz
>
>This concept if extremely basic. I am surprised that such a
>experienced and knowledgable person as yourself had to ask?

Then answer my question in my other post regarding your ignorance of radio fundamentals. I'll repost it here in case you missed it: "If 27 MHz drifts 1350 Hz, then 864 MHz will drift 32 times as much, or 43.200 KHz -- damn, that's almost in the next county! Hey Tnom, how do they make cell-phones work with that much drift?"

Well?

You can't because you don't know shit about how these radios work.

Multiplexing is the use of two or more signals on a single channel. FM stereo is probably the most recognizable example. Digital multiplexing is exactly the same except that it uses digital signals on the same line or bus, usually with a seperate line or bus to properly demultiplex, or 'address' the data. The data busses in your computer use 'digital multiplexing'. You are ignorant.

Come to think of it, you have been supporting my point all along and I didn't
even see it: You keep saying that a net works by each operator dialing into one
transmitter, establishing the 'base freq' to which all the others on the net
tune. Right? Ok...

Well, it's no different under the channel system except that the 'base freqs'
are predetermined channels, which makes it easier because the channels are not
only universal, but pre-tuned into the radio -- all you need to do is change the
channel! Heck, it's so easy that even a chimp could operate a CB (and many do!).
So why do -you- have such a problem with it?

No your statement is still incorrect. The clarfier controls the VCO.
The carrier comes from the carrier oscillator. Thats two different
circuits. The clarifier does not change the carrier oscillator
frequency. Apparently you don't have an understanding of how a radio
works. Would you like me to scan a block diagram and upload it for
you to look at.

Because the base freqs are not always the same, they vary. It would
be great if they all were exactly the same. Then you wouldn't ever
need a clarifier. But that doesn't exist in the real world.

Did you find that block diagram yet. Does the carrier for the product
detector come from the VCO or the Carrier oscillator?

Wrong. The VCO -is- the carrier oscillator, providing one output for the first mixer stage in Rx, and another output to an up-converter for Tx (a method called 'heterodyning', a concept beyond Tnom's comprehension, and apparently beyond your's as well). Of course the older radios -- the ones that didn't use PLL synths -- usually had seperate Rx and Tx oscillators. Some Swans, however, stood out as exceptions, both the Rx and Tx being controlled by a single VCO, hence my mention of them for the purposes of comparison.

A chimp that is obviously more educated and experienced than yourself, as nobody
asked -you- to make the decision.

There you go again, whining how nothing is "exact". I provided some REAL WORLD
measurements as to just how much the radios deviate from the channel freq, but
that was ignored. I provided information on just how accurate the crystals and
oscillators are in the radios, but that was ignored. I explained how the signals
are mixed and not multiplied, but that was ignored. You two are just ignorant.

>Did you find that block diagram yet. Does the carrier for the product
>detector come from the VCO or the Carrier oscillator?

Yes, where's that block diagram? And don't forget to reference the radio it is for, so that way I can verify it and eliminate the possibility that it was edited prior to posting.

Sorry, the VCO does not provide the carrier for the product detector.
Its a shame you wasted all that typing to make an incorrect statement.

No need. Many are already available on the net. For example:

http://www.radiomods.0catch.com/presidentjacksonbd.gif

Notice how the VCO buffer (TR22) has two outputs, one to the 1st RF mixer (TR12)
for Rx, and the other (follow the red line) to the Tx mixer (IC8), where it's
MIXED with the output from the CRYSTAL-controlled 'carrier oscillator' (TR24).
Notice that the carrier comes from BOTH the VCO -and- the 'carrier oscillator'.
This is EXACTLY as I described, as is used in almost EVERY PLL radio.

BTW, the term 'carrier oscillator' isn't a very good term; it does carry the
modulation, but channel selection is done at the VCO. And if you look at the
schematic you will see that we were both wrong in one respect, because the
clarifier controls the carrier oscillator, NOT the VCO. Regardless, the
clarifier STILL performs the SAME function as the BFO pitch control, and from
the operator's perspective the two are IDENTICAL.

I do notice how the Carrier Oscillator (TR-24) go's directly to the
SSB Det. Not after being mixed with anything. Which is not as you
decribed when you said the clarifier acts like a BFO. The carrier
oscillators frequency is fixed. When you change your clarifier you
are changing the receive frequency. not the injection frequency.
So the clarifier DOES NOT does not perform the same function as a BFO.

>
>BTW, the term 'carrier oscillator' isn't a very good term; it does carry the

NO! The clarifier does not control the carrier oscillator. show me
where it does? You are the only one wrong, your block diagram proves
it. The diagram doesn't show the clarifier, but its connected to
TR-23.

I uploaded my scan to: alt.binaries.pictures.radio

cb block.jpg

It shows where the claifier is connected and its not to the carrier oscillator. Thats a Uniden diagram.

A lonely spinster, aged 70, decided that it was time to get married.

She put an ad in the local paper that read:

"HUSBAND WANTED, MUST BE IN MY AGE GROUP (70's), MUST NOT BEAT ME, MUST

NOT RUN AROUND ON ME AND MUST STILL BE GOOD IN BED!

ALL APPLICANTS PLEASE APPLY IN PERSON."

On the second day she heard the doorbell. Much to her dismay, she

opened the door to see a gray-haired gentleman sitting in a wheel

chair. He had no arms or legs.

The woman said, "You're not really asking me to consider you,

are you? Just look at you...you have no legs!"

The old man smiled, "Therefore I cannot run around on you!"

She snorted. "You don't have any hands either!"

Again the old man smiled, "Nor can I beat you!"

She raised an eyebrow and gazed intently.

"Are you still good in bed?"

With that, the old gentleman beamed a broad smile and said,

"I rang the doorbell didn't I?"

Definition of the SuperBowl
If 10,000 CB'er's are on the SuperBowl
then only 1000 can be heard some of the times
& only 100 can be heard most of the times
& only 10 can be heard all the time
This is a great example why the bowl is not for the weak!

Hey, Swan...

You wouldn't happen to have a manual and/or schematics for an old Swan 350D? (Yes, I know the D stands for Drift... I'm planning on fixing that..) I have one that's in bad need of some tender loving care, cap replacements, and a tuneup, but I have no manual for it.

No, the address above is not even close to my real email address.. If you need it, I can get it to ya.

-SSB

I seem to recall saying that "...It can also be accomplished by shifting the
frequency of the local oscillator (the VCO as it serves as the local oscillator
to the first mixer), and using a product detector instead of an AM detector",
and that's exactly how it's done in the radio I referenced. Now how does that
differ from your rant?

>So the clarifier DOES NOT does not perform the same function as a BFO.

Tell me if this is too simple for you: The pitch control of a BFO will change
the pitch of a received SSB signal. The clarifier will change the pitch of a
received SSB signal. They do exactly the same thing. There is no practical
difference between the two. They are synonymous. Identical in operation. If the

knob wasn't marked you couldn't tell if it was a BFO or a clarifier. How many different ways do I need to rephrase this so you can understand it?

I checked the schematic again and you are right: the clarifier does not control the carrier oscillator, and it DOES control the varactor at the base of TR24 (the VFO). I was looking at TR21 thinking it was the carrier oscillator. Thank you for catching my mistake. But if you look back a few posts you would see that I said the same thing (and quoted it above). What's your point?

>I uploaded my scan to: alt.binaries.pictures.radio

>It shows where the claifier is connected and its not to the carrier
>oscillator. Thats a Uniden diagram.

I deleted most of my newsgroup list cause it was too big for this newsreader (16-bit), and unfortunately that is one that was deleted. But instead of re-downloading a new list, I'll simply concede that the clarifer is on the VCO. In fact, I have absolutely no problem with that, as all the other block diagrams from the site I cited show exactly the same thing. And that fact is also consistent with what I have already said. Now, once again, what's your point?

Where did I say anything about using the VCO output as carrier for the product detector? I don't see that anywhere. Do you?

The vast majority of HF marine comms take place on preset channels. I have no doubt that there are marine radios equipped with VFO's for the use of private company comms.

So how does that help prove Tnom's case that CB clarifiers should be illegally modified?

I submit my prior statement is still valid:

That's the difference between Frank and Jim. One cares about the
Citizens Band and would prefer that idiots didn't foul it with butchered
radios. The other couldn't care less.

You know what's simple? Reading the post to which you intend to reply,
UNDERSTANDING the same, writing your reply, verifying your facts BEFORE you
post, THEN post. It's not like you don't have enough time to make sure that what
you are saying is correct or not, right? That way you don't sound like an
ignorant fool by posting mis-quotes and techno-bullshit. Of course there is a
drawback to that process, as there are some people that will accuse you of being
a know-it-all smart-ass, but they don't have enough brains to realize that it's
much better to THINK before you SPEAK.

>> almost in the next county! Hey Tnom, how do they make cell-phones work with that
>> much drift?"
>
>Why should he, when you won't respond to the hard questions about
>unlocking clarifiers?

What "hard questions"? He made an outlandish claim that the TYPICAL drift for CB radios was equal to the maximum frequency tolerance permitted by the FCC. He also claimed that most stock radios drifted so bad that they were unusable in SSB mode. He provided absolutely NO evidence to back up that claim, but I

provided a WHOLE LOT of evidence that disputed it. His "hard questions" were answered, he just didn't like the answer.

> All you can answer is "it's illegal"!

If that's all you got from my replies then you haven't been reading them.

> And Jim
>Hampton has to supply a technical answer for you!

Did he? When and where? I must have missed it.

> And you claim to be
>a commercial broadcast engineer? What stations? LOL!

What's your call, Clyde?

Frank;
Here is a hint for you on how make yourself more credible in this newsgroup.

Reading the post to which you intend to reply,
UNDERSTANDING the same, writing your reply, verifying your facts BEFORE you post, THEN post. It's not like you don't have enough time to make sure that what you are saying is correct or not, right? That way you don't sound like an ignorant fool by posting mis-quotes and techno-bullshit. Of course there is a drawback to that process, as there are some people that will accuse you of being a know-it-all smart-ass, but they don't have enough brains to realize that it's much better to THINK before you SPEAK.

That way you won't post techno-bullshit, like the clarifier changes the carrier oscillators frequency.

Swan 350's are great radios, sounds like a fun project. They don't
drift as much as they have the reputation for.

437. competition coil antennas

Newsgroup: rec.radio.cb
Date: 2003-07-07 02:18:58 UTC
From: William Baumann <wbaumann20@hotmail.com>
Message-ID: <mM4Oa.55833$Xm3.15046@sccrnsc02>
Source record: 161971

I am looking for competition coil antennas for a mobile setup. If you know of any links please post them.

438. Re: competition coil antennas

Newsgroup: rec.radio.cb
Date: 2003-07-07 02:51:47 UTC
From: Scott Unit 69 <scott_unit_69@yahoo.moc>
Message-ID: <3F08E043.424258C2@yahoo.moc>
Source record: 161972

A fool and his money are soon parted.

The big coil is for wide bandwidth and power capacity.
A dummy load also has a 1:1 SWR. These are a big gimmick.

439. Re: WANTED: Courier 23 or 23+ mic connector to put on new microphone.

I like my Davemade 1/2 wave. Also
Cowtown Kid in Texas makes the Predator 10K. He makes a single coil (i like as
it
isnt real heavy...windload, tree limbs).
He also makes a double and triple coil.
Doubles run about $60 (+ or - $10) and the triples are expensive, $125.
Davemades will run $75 or so.
All accept a Wilson stinger for replacement. Just be sure and regularly
maintain them. Loosen the set screw, pull the stinger and hit them with some
steel wool and re-lube.
Good luck....333 Mobile

Hi all
a while ago I was on e-bay and I bought myself a handheld UHF cb radio hoping that it would actually make the 3km radius (my mate lives about 1 km away and still didn't reach!)

what would be a cheap and easy cb option to keep in touch and have some fun chatting on the cb to my mate?
thank-you!
- Paul

(You stated "TX does not move". If this was true then your reasoning is
just fine, but TX DOES MOVE. It will move from temperature differences
within one radio. It will move from some instability in one radio. It
will move when measured from one radio to another radio. It will move
after a radio gets older. It will move with a perfectly brand new,
perfectly adjusted radio.
It is hard on the ear to listen to a radio that is off 200hz on SSB.
There is no way to align multiple radios within 200hz if you can't use
your own ears to align your transmit. If RX and TX are one, and if you
have a good ear you will automatically align TX with your own ear.)
_
>OK, so I readjust so the received sounds like I

>like it, maybe a bit higher in pitch, now I have

>just moved the TX freq as well and now the

>other stations complain that I am off

>frequency.

Why is that? Many of the radios in use have dual clarifiers, one for
receive, one for transmit. Galaxy is a perfect example of a radio that
has both, although they have a reputation of being somewhat of a drifter

for SSB use (which can be minimized). Moving the receive may deviate the transmit slightly when one (receive) is located on top the other (transmit) but is nowhere near the magnitude of representing a "problem" as some would try to foster and prefer to have us believe.

>If they readjust so I sound correct to them,

>then they move their TX frequency and now

>they don't sound correct to me, so I readjust

>my receive frequency, which again moves my

>TX frequency and here we go again, chasing

>each other all over the band.

Hey, some folks are AM folks, some are SSB, some are both. Folks that have problems that you allude to , merely by reason of unlocked clarifier and the tuning of SSB on cb, are probably challenged in more than this arena and should stick with AM cb or 6 meter. If ever I saw an argument for plug and play, you and Frankiestein just made it.

>If every one leaves the transmit frequency

>alone

But they don't..that's reality..your problem is with reality...real world situations. The fact is, people do not conform to the way you feel they ought,,and that's been a real problem for you.

>and adjusts the "clairifier" to make the

>received signal sound like they want it, then

>everyone stays put as far as transmit.

But many hammies are using big rigs to talk on cb, AM and SSB, compounding and creating your circular argument. Real world situations are the polar opposite of your Camelot-visions of 27 MHZ.

Well then verify this.

multiple stock SSB CB operators?

2. If so are you all on the same frequency?

3. If so where? I'd like to see this verified.

****

I already know your response.....Avoidance of the
simple answers to these simple questions, going off on
a tangent in a attempt to complicate and hence wriggle
out of the answers, or denial that you operate at all.

Either one un-validates your position.

ignore..but to answer your question,,,,
Nothing at all,,,I merely wish your input on such behavior of hammies
since you removed yourself from the topic,

>thinking too much for you or

>have you lost your common sense?)

Hmmm,,I see, not only are you another hammie who doesn't practice the
hammie creed, you rush to join the lids of this forum and make your
posts of a personal nature and that of the poster instead of the message
or content (sigh),,well, ok,,since you insist....,,one can always
acquire "common sense".....,,,but at your age, still spelling the
way you do speaks volumes about which one of us may possess such sense
you speak of.
_
This is not a USA-only forum,,the FCC has no
jurisdiction over the rest of the world. Arrogance that some Americans
possess is illustrated by yourself by the feeling that the entire world

revolves around them and their "rules."

>pardon me, but would you care to explain why

>more than 90% of the posters in here are

>generally from the US?

I could, (income per capita, average American wage, access to bigger, better, cheaper,and more powerful computers and networks,, american popularity of cb etc., etc.) but you probably would have a problem with it, strain yourself in the process, and it means nothing in the context of usenet. Failed attempts at obfuscation concerning usage doesn't change the fact that the forum is worldwide and not exclusive to the US.

>this may be an "international discussion

>forum", but it doesn't have international listed

>in its name, nor in the usenet motd for this

>group.

LOL,,,Gee,,,it also doesn't say "Freeband is not part of cb".......how absurd, Eric. One can see that you really wish to apply your non-logic across the board, but you are unable to pigeonhole. Once again this forum is not limited to the US, despite the mythical figures you pulled from your ass and tossed about as fact.
In addition, Frankiestein, (in what is becoming a familar scenario) had an imbecile-like moment which he claimed integrity in a cb forum is equated with identification. It doesn't claim anything of the sort in the name of the group, does it, Eric? Absurd.

>besides, you sound just as arrogant as the

>rest of us

How drool. Please enlighten the world with your reference to the word "us"? Who else would you consider so pious that they readily admit to sharing the arrogance on display by yourself?

>and I suspect you are probably a

>US citizen in any case).

And this is of concern to yourself why?
who said it was a concern to me?

It certainly was concern enough for you to
become bothered enough to try and justify
such boorish behavior. Twas you that chose
the word "suspect", yet you claim no concern? Hokayyyyy!

–
No, it doesn't apply to any frequency down to 12 meter. Many of those frequencies are abandoned and not in use.

Again, your claim holds only slight merit when referring to the US,,this forum is worldwide and so is cb. These "commercial" interests you speak of, IF they are to be found and IF they were to be interfered with, have no recourse against any ops outside the US and there exist plenty of those...

>say that again?

Now I know why so many challenged hammies that suffer communication deficits visit rec.radio.cb, Eric..to learn what you haven't..

>I know for a fact that those channels below

>26965 are still in use in many areas of the

>country. wlwg 700 cincinnatti still uses FM

>remote pickups down there in the 26.210

>regime (I pick them up fairly often on the

>shortwave and have to slope detect them

>because they are narrowband FM).

>abandoned?

Yea,,there are several remote pickups for broadcast stations. Do you even know what a remote broadcast is for Eric,,what it entails,,why it exists at such frequencies? I also know for a "fact" that very few of these frequencies are still in use. I didn't say they were ALL abandoned, I said the majority are absent of use, void of action,,,in other words,,most are abandoned. Technology has rendered most of these freqs useless for businesses..you can always find an exception to cite, Eric, but the fact remains, the majority are abandoned and not in use by their authorized users.

> that isn't what the fcc frequency database

>has to say.

I'd advise against becoming a "sheople" but apparently I may be too late...if the FCC or federal government claims it, then it must be true, Nevermind ascertaining, thinking for yourself.......believe what you are told and everything you read, especially from the government.

>they are still allocated and still protected,

>even if they are not in wide use.

Now we have you hedging, doing the Gillinad Frankiestein-flop,,you are practically reversing your earlier position and claim of these freqs being used, to agreeing with myself that they may not be in wide use, but are still protected. You are coming along but still have some learning to do concerning this issue, grasshoppah. They are not protected. There is none monitoring these frequencies to offer this

"protection" you speak of. Any "protection" amounts to a response (usually a letter of inquiry or warning) via a complaint to the FCC. A sneak peak at all the hammies getting popped (who were turned in by other hammies via COMPLAINTS) illustrates how these scenarios are dealt with.... I wouldn't refer to such action as protection, but you may.

_
>the rules are clear,

And there we have what is causing you such straining, in all it's refelcted glory,,,,having a cat over the rules which you have no control over,,you may wish to ring up a friendship with Dave (the Hypocrite) Hall...he shares your pain, only he brings with him years of illegal cb and high power operation....do you bring the same virtues to bestow upon us lowly cbers, Eric?

>unless you have a license

>to operate in the section from 27.405 - 28.000

>(which I KNOW for a fact no one here does),

>you open yourself up to litigation from the

>FCC,

Or lipservice from those not unlike yourself that have power issues and issues of incompetence and the need for control over something in their mundane lives, no matter how trivial..

> any commercial concern that may have

>operating privileges there or even the military

>(which does have some allocated spectrum

>there) this applies also for any frequency

>below 26.965 clear down to 12 meters (mostly
>commercial and marine band HF stuff).

>you don't have the letter from the FCC saying

>you can operate there, its the same as not

>having a license to drive a car on any street in

>america (radio operations are a privilege, not

>a right and onyone spouting otherwise really

>doesn't know what they are talking about).

No, it's not the same at all,,you are comparing apples and tomatoes,,one has the possibility and probability to maim, injure and even kill when operated in a reckless and dangerous manner,,,,,,,,spouting otherwise when one really doesn't know what they are talking of is a two way

street, Mr. Oyen.

>excuse me, what to vegetables/fruits have to

>really do with the application of rules and

>regulations with regard to operation of a

>station IN THE US?

Twas a figure of speech,,,,you are attempting to compare two presentations that have nothing to do with each other. Often, when one makes such embarrassing gaffes, the phrase "apples and oranges" are used to denote the absurdness of the claim,,I took the liberty of plagiarizing one of our forum-frequent visitors (wasn't it yourself?) fave saying of "apples and tomatoes". Kapish?
Now, once again, claiming one doesn't know what they are talking about, Mr. Eric Oyen,when it was yourself attempting to compare a rather benign act (freebanding) with the act of driving an automobile in a reckless manner, which has a great possibility and probability to kill or maim, begs the repeating of: spouting otherwise when one really doesn't know what they are talking of is a two way street, Mr. Oyen.

>if you didn't get my meaning that time, then

>you need to reread the originating statement

>that lead me to ask why a comparison of

>apples and tomatoes was relivant (let alone

>apples and oranges which are both fruits).

In the first place, your "meaning" was nothing but a failed attempted snip of something you wished not to acknowledge,,the illustration of your poor comparison of a rather benign act (freebanding) to one that has the probabilty to kill and maim when operated in a reckless manner (an auto). Claiming one who fails to share the exact myopic view and manner you profess does not equate that one "doesn't know what they are talking about."
In the second place, I wasn't the one asking another to repeat themself (as is often indicative of a communication deficit),,you were, Mr. Oyen.

>this point is moot anyway.

Agreed,,stop harping on semantics and do try to acknowledge that freebanding is nothing like "operating a car in a reckless manner." It's not that I care, per se, it's just that it's so blatantly and patently incorrect, it's almost offensive to the readership that you would expect another to buy into such a mindset you have created. I point these things out, ya' know,,whcih is why I am designated a dangeroous individual to those who wish to curb freedoms, such as Dave (the Hypocrite) Hall, WA3MOJ, Frank Gillinad, N8WWM, adn KC8LDO, You are rapidly declining to their status, Mr. Oyen. I suggest reassess your

objective, lest you be reduced to tossing tiny pebbles from the shadows like the pseudo-anonymous attempts of Dave and Lelnad.

_
If you want to show me where in the FCC
rules it governs foreign stations, be my guest.

>Why don't you check the treaties that the US

>has with many other countries (its all in the

>ITU rules).

There is absolutely nothing in the ITU that concerns the FCC governing any foreign stations. Period.

>why do you think that most places have similar
>allocations of space on the HF bands?

MOST places? Gee, Eric, you really are clueless on this freeband issue, as are those that feel the need to make a post personal due to a massive defect in effective communicative technique. "MOST" places have no method of dealing with what you speak,,,the majority of smaller countries and locales across the planet certainly do not have allocations for space on the "HF" band, Eric...they don't give a rat's ass about American hammies,,as matter of fact, most Americans don't give a rat's ass about hammies or cbers.,,,this doesn't sit well with certain hammies who fail at attempting to demand respect simply by virtue of licensure.
They act out their feelings iby attacking others merely because they are befuddled and cornfused about how to properly express themselves and it angers them. Again, you appear to be on your way to the dwelling with the sub-hammies,,,,,is this what the amateur creed represents, Mr, Oyen? Are you also a member of hammie organizations? Or are you merely a lone trouble-maker, like the lids in this group who have been outcast by hammies due their nature, and by default, cling to each other like dying desperados at the end of a cheap western.

_
>The FCC is strictly a US agency and thats

>where I was addressing my comments.

Ahh,,another hammie with a power-hungry jones that needs to tell others what to do in order to feel better about himself. Stick to hammie radio, better yourself, and clean your own backyard prior to attempting another how to operate.

>gee, you put a lot of spin on that one.

MR. Oyen,,In the context in which you deliberately removed it from and re-presented it, one may actuall believe such bullshit,,,but it was in response to the comment of you made and snipped:
>otherwise, stick to 11 meters (the class D

>channels if you please) or get your ticket

>(amateur radio) and rgchew with a bunch of us
>on bands you only dreamed of operating.

It isn't spin at all when presented in it's original context that for some reason, you went out of your way to snip and eliminate. And speaking of spin, you actually introduced what you refer "spin" when you made your initial comment concerning myself, which you know nothing of. Add to that your selective snipping, and your "spin" is quite noticeable. Are you another hypocrite, eric, that cries like Frankiestein when he gets back what he dishes out to others?

>perhaps we should take this up on the O'reilly

>factor?

And about as non-sensical as the crank-happy (oh excuse me, ex-crank,,,you know, like ex-illegal cber) user (the Hypocrite) Hall.

_
That explains it,,...555 is locked up in Phoenix and s free-for-all... Perhaps the fact that all that lawlessness on 555 in your own back yard that has been going on for years has angered you to the point of no return,,no wonder you have a hard-on for freebanders. Buy a better radio, prehaps something with better rejection, perhaps a beam,,or maybe, give it up altogether if it makes you so upset,,a hobby is suppoosed to be enjoying and relaxing,,yet, you seem to fit the stereotypical mold of a lid harassing all that he fails to comprehend. Trust me, the majority of those in here want nothing to do with these "dream" frequencies you speak of, if you are the example of what to expect.

_
>small problem with that. I don;t have any

>equipment to go there,

_
What equipment do you run, Eric?

>so how would I know

>thats its strictly a problem in my back yard?

Gee Eric, you just effectively ruined Frankiestein's, WA3MOJ's, KC8LDO's, n8wwm's, and Dave Hall's argument that those nasty illegal freebanders continually interfere something awful with legal amateur services,,,,it's a known fact that Phoenix is about the most lawless radio town in the country for freeband,,,big power coming out of Phoenix on 555 for years on end and you experience nothing.,,nada,,why, you claim you're not even aware of any problems,....LOL

>I only have your word on it,

No, you have the word of the abve mentioned lids, but as they are confirmed liars and not one managed to maintain an original email address from any length of time,,I share your skepticism.

>and so far, you

This isn't about me, as much as you may wish to make it. Cling, Mr. Oyen, cling to those lids who are actively circling your hammie status and adding to your rapid decline. Failure and misery love company.

>haven't exactly proven yourself to be

>trustworthy, now have you?

Addressing your inquiry, to which conversation we had in the past do you attribute such claims, or are you merely advancing your sheople status in keeping with the angry minority lid group among us? But in keeping with addressing your inquiries, such as "how do I know it's a problem in my back yard?",,,well, Mr, Oyen,,YOU wrote....

>sir,

>freebanding is NOT a hobby.

>its a deliberate and amlicious violation of

>federal rules and regulations (those being

>policy, and thus according to the US supreme

>court, have the affact and power of law).

>you want to attract attention, fine. just don't try

>to take others with you when you go down.

Once again,,in the first place,..addressing your claim of "How do I know it's a problem in my backyard?" Well, who were you professing to be speaking for in the above, Mr. Oyen? Someone elses backyard? LOL!
And despite your refusal to acknowledge the existence of something merely because your myopic scope prevents you from agreeing with such, freebanding is indeed a hobby. Merely because aspects of it may be illegal in the US does not make it any less a hobby. Misconstruing a post about freebanding as an attempt to "take others down" illustrates the gravity of your maleficence, intended or ignorant.

>DE N7ZZT

>Phoenix, Arizona

The bunch of of all have locked clarifiers

> 2. If so are you all on the same frequency?

Yes. The radios are all older, and have been retuned by the local
tech. My PC-122 is from 1988. No way that would be too close 15
years later after bouncing around in three cars summer & winter.

> 3. If so where? I'd like to see this verified.

Come to Baltimore on a Tueday night. The rest of the time
we're on 2 meters hiding from the Mexicans and assholes
on AM that ruin the frequency every night.

Frequently.

>2. If so are you all on the same frequency?

Not only are they close enough to make communications practical, but most of the time I don't have to adjust my clarifier -- except to hear the morons that have their's unlocked.

>3. If so where? I'd like to see this verified.

Haven't you been paying attention to the newsgroup for the past few years? I'm in Spokane, WA, where potholes come to breed. And I'm sure it's the same story all around the country. Find a radio that hasn't been butchered and listen for several days, noting (marking?) the clarifier position for each conversation. After a while you will see that there is one position where most of the signals sound the best -- those are the radios where the clarifiers haven't been modded. The rest will be scattered around the channel in a pattern not unlike the classic bell curve (did you ever look up that term, Tnom?). The system works. You just don't know it works because you are so hung up on mods that you have no experience working with legal radios.

There is no doubt that stock radios CAN be adjusted to the same
frequency within a close knit group of SSBers with some coordination,
but do you expect this to be the norm through out the whole
continental United States?

Why don't you suggest that everyone should just unpack their radio
and start talking with the success you are talking about? Do you
suggest this?

Do you suggest that some in your group can leave their radio in
their winter cold car and just start talking away with the success you
are talking about?

Well, I'll agree that Spokane is kind of isolated, but I have lived in Oregon, California and North Carolina (Jacksonville, in fact), and it's always been the same story -- never had the problems you are talking about.

>There is no doubt that stock radios CAN be adjusted to the same
>frequency within a close knit group of SSBers with some coordination,
>but do you expect this to be the norm through out the whole

If the radio manufacturers want to satisfy their customers by providing a product that works as described, yes. And they do a pretty good job.

>Why don't you suggest that everyone should just unpack their radio
>and start talking with the success you are talking about? Do you
>suggest this?

Why not? I've done it, and so has most anyone else that didn't get their radio modded out of the box. And why shouldn't they? That's the way the radios are intended to work. It happens, and it happens in the REAL WORLD.

>Do you suggest that some in your group can leave their radio in
>their winter cold car and just start talking away with the success you
>are talking about?

I've done it, but I usually turn on the heater and scrape the windows before I start jawing on the radio. Think about it: If they didn't work in cold weather the radios wouldn't sell up here in the Northern states or Canada. And they do sell.

Tnom, if you are digging for excuses to unlock your clarifer, I have no doubt that you will find some, but your excuses are not going to be of a technical nature, only behavioral. The radios work just fine without any modifications. Accept it and move on.

475. Re: competition coil antennas

Newsgroup: rec.radio.cb
Date: 2003-07-07 17:24:01 UTC
From: William Baumann <wbaumann20@hotmail.com>
Message-ID: <R0iOa.127274$R73.14601@sccrnsc04>
Source record: 162009

Well the reason that I listed the thread as "competition" antennas was that that is what many of the antennas listed are supposed to be designed after. I was under the impression that these antennas were supposed to be the "every day joe" version of competition antennas at a fraction of the cost. With that said, I figured that a full/original competition antenna would provide the performance that these might not. I know that any/most loaded antennas will not out perform lets say a 102 SS whip, but in my application and vehicle that is just not practical.

I wasn't trying to be a smartass in my post Scott Unit 69, just curious as to your meaning as I have been out cb circles for a few years. Sorry if my post came across wrong.

Are there other loaded antennas other than the ones I listed and other than the W5000 that would be a better performer that people really liked? Or is the W5000 still the best on the market for a loaded mag mount?

I have heard so many new radios being almost useless as far a SSB
goes because of frequency issues.

If your radio is cold (10 degrees) it will absolutely not be within
200hz of where it should be. Better check it again.

The excuse is based on REALITY. The excuse that makes sense.
Do a proper clarifier mod and real world unavoidable frequency
issues magically disappear.

I would tend to disagree with you there, too, not only because I don't have a problem talking when mine gets cold, but because most of these radios are built with some degree of temperature compensation. I'll toss a couple in the freezer and get back to you on that one.

>>Tnom, if you are digging for excuses to unlock your clarifer, I have no doubt

You have complained about these "frequency issues" all along, but have yet to provide any evidence that they actually exist, let alone that the problems are "typical". I have provided plenty that says quite the opposite. In fact, the proof exists on the band, for you to discover at any time you want. Instead, you keep dragging this out WAY too far with your excuses and scenarios. So put up or shut up, cause you are just about to get plonked.

It would be nice if you could get the freezer colder than 30 degrees.
Put your radio in the freezer. Put your radio in a hot car. Measure
the frequency at 72, 20, and 120 degrees.

No shit and with an open clarifier it will still be off frequency until you adjust it. The same as if your clarifier was locked. An open clarifier has no magical powers when it is hot or cold out.

.

Welcome to Galaxy radios. PC-122's, Grant's & older 148's don't have this problem unless someone did a super-slider to it, and then the clarifier control becomes your worst enemy. The cheap potentiometers used just don't have any temperature tolerance and you drift away. My 122 will move just enough after being on for an hour, that I have to adjust my clarifier. No one has ever told me my output was drifting and they had to follow me around. A proper CB will stay close enough to not require a change in operating frequency. A normal periodic realignment to factory procedure should be done to ANY radio.

So you will still be off frequency if the clarifier is open, until you make
an adjustment or the car warms up.

I still think that a Firestik KW-7 is an a$$kicker. I have never had to tune one.
Just mount it with a real good ground and kick back. YMMV.

There is nothing wrong with being off frequency. This occurrence is
normal. What's wrong is not being able to correct it.

Your name fits quite well with your response.....You don't get
the point. The point never was that a clarifier mod will make your
radio stay on frequency. The point was a clarifier mod can put you
back on frequency.

5 volts * .02 amps = .1 watts

16 mW carrier, 100% modulated is 64 milliwatts,
they say 150% which is 96 mW USB. Listen for it.

Paul,

Hopefully, we can get something accomplished here besides the usual flames in this group. 3 km isn't that awful far and I'm surprised that the UHF didn't manage that small distance. Although likely approaching the limit for FRS type radios in the US, the distance (for us US types) is *under* 2 miles. Is there a hill or any obstacle between you two? That short a distance may well be doable on 27 MHz handhelds. I don't know the rules in Australia, but is there any chance the antenna is detachable? If so, you could substitute a longer ducky with some gain (I did this on a 440 MHz handheld and it really increased the range I could obtain on the radio).

Best regards from Rochester, NY
Jim

Most freezers made in the last 20 years are capable of zero degrees
Fahrenheit.

How so by adjusting it by ear? or using a freq counter? and if you have a
freq counter and can do the clarifier mod why not adjust the radio to the
proper freq

No, I don't think I will, since I have already provided more than enough that
disputes your "frequency problem". Even if I did, you would probably claim that
I falsified the data -- without indepentant verification the results are moot.
No, I think it's time that you put up some evidence that supports your claims
that brand new CB radios typically drift 1350 Hz, that the radios don't work if
you bury them in a snowpile, and that more than two operators can't talk at the
same time with stock radios. For the last time, put up or shut up, Tnom.

because hes a keyclown stu and keyclowns dont think straight. he
probably wants a 4 foot antenna with a big coil on it because the dealer
told him it will handle 50 million watts.

If you sit in a car that is 120 degrees hot or 0 degrees cold and
operate SSB then your nuts LOL.

Didn't you know that the human ear has absolute precision and can tune a radio
to the EXACT frequency all the time, even when it's cold outside? Sheesh, and I
thought you were smart...

60 million if it's colder than 30 degrees.

I did have a little trouble with a foxhunt transmitter one evening that was drifting.
Of course it was -25F out, and the coax to the antenna wouldn't unroll either.

I haven't noticed any of my ham gear drifting significantly. WWV is a nice convenient frequency standard, and from september sweeps to january foxhunting, the FT-847 has been dead on.

Maybe you get what you pay for.

LOL good point maybe Tnom is trying to operate SSB from inside a
cryogenic tank.

I agree.

My radio has no nerve cells to feel the extremes, but it still needs
to be operable.

Well.....then I'll have to do it for you. I have two
absolutely stock radios. I'm opening the freezer now.

P.S. Any CB SSB operator already knows what happens in the winter
months, and any CB SSB operator if they pay attention knows what
happens with a radio sitting in a hot car. I'll post the specifics
anyway.

By ear, the older ham equipment, like the monoband Heath Hot Water
didn't have a RIT or Clarifier. You just had to get used to tuning
stations in by the sound of their voice. It just took practice.

The exact frequency is unimportant as long as all parties are on the
same frequency. Most people can get within 50hz. Some are tone
deaf and will never be able to tune a SSB radio by ear.

Sorry, this isn't making any sense, if you can tune in a SSB signal
with the clarifier, with no mod done. why can't you tune in the
same signal when your transmit frequency tracks with the receive?
Does your ear know that your moving the transmit frequency also and

suddenly go tone deaf?

Oops....He forgot to evaluate his response. It kinda makes him look
like a idiot.

P.S. Notice I didn't call him a idiot. I just said his response seemed
like it came from one.

Stay away from the Cobra Radios! Yes, they used to be good radios; that is not the case anymore. The "Sound Tracker" radios are also horrible.

For your use, I'd get the Uniden 520XL. It is small and inexpensive and has a PA setting which is a lot of fun if you hook up a speaker in your engine compartment.

The BEST choice for a CB antenna is a Wilson 1000. If you don't want to drill a hole in your roof, get a Wilson 1000 Mag Mount.

Stay away from 9' antennas and big Cobra 29 radios. Yes, there are advantages to these items, but this is beyond your needs.

A CB in the boat is just a problem, but it will work. The suggestion to use FRS or MURS radios is a good idea. If you need more help with this, e-mail me privately.

Dino

Because if I like to hear someone a little more high pitched and had the mod
done everytime I turn my clarifier, it changes my transmit freq, If I am
talking to you and you prefer to listen a little lower pitched perhaps a few
hundredths of a kc's low, so now i have to retune because you moved your
locked clarifier to have me sound a little lower, then after I retune AGAIN!
you now move your clarifier which changes your tx AGAIN! so now I have to
retune AGAIN.... Do you get it

WRONG. In the US, the CB service is restricted to the 11 meter band.
Definitely HF territory, a far cry from VHF...

How do you and your cut clarifier pals know what the hell frequency you are on? By reading the little + and - scale on the clarifier knob? Heck if it's below 0 in the car the knob wont turn anyway and if its above 120 you cant see it for the sweat in your eyes. Whos kidding who Tnom?

> Some are tone deaf and will never
> be able to tune a SSB radio by ear.

That's why CB transmitters have set channels.To make it easy for everyone to use. Except people who don't understand how to use a clarifier. Ass.

That is what I would tell a guy like you a fixed clarifier works perfectly
fine.

kewl,
well actually at first my brother got me a handheld frs radio from the states, but I returned it because it didn't make the distance between me and my friends house! I was very disappointed! Then I found out that frs was not even legal in Australia so I was lucky that I did give it back!

anyways, I will probably look at getting one that has 5 km distance!

The range on the average CB even the smaller "Walkie-Talkie" style is much better. FRS main advantage is it's much smaller size, however if you want to communicate reliably (more than 1 mile) a CB or 2m Amateur equipment is the way to go.

You are right about CB I have seen more and more people with them again. It started in the 70s then died out, back in the late 80's then died out and now its back again???

Homac

>I want something which can communicate 2-3km and keep hearing how limited FRS >radios are. I know CBs are starting to come back, is the range much better. >Any help would be appreciated.

Part 95 includes

* the familiar 27 Mhz 40 channels 4 watts AM/12 watts PEP SSB

* MURS 151.82/.88/.94 154.57/.60 2 watts TPO

* FRS 462.563-467.713 14 channels .5 watts small inefficient built-in antennas

* GMRS 16 channels in UHF band near FRS $75 license for 5 years-repeaters allowed

NOTE: 22 channel "5 mile" GMRS/FRS radios won't do 5 miles and are no better
then a similar FRS radio, and a GMRS radio requires a GMRS license to use.
The paid up folks will get real bitchy, real quick if you use the 8 "extra" ones.

Not knowing or caring what frequency you transmit on is not acting
responsibly if you are in between channels you could be causing
interference to people operating legally above and below you. Oh I
forgot you don't care your a keyclown other peoples rights mean nothing
to you.....

OK, OK, don't get huffy I'll take out the word "legally" since that
seems to bug you a lot. Here now read it again:

>>Not knowing or caring what frequency you transmit
>>on is not acting responsibly if you are in between
>>channels you could be causing interference to people
>>operating above and below you. Oh I forgot you
>>don't care your a keyclown other peoples rights mean
>>nothing to you.....

So as you see the point was not about legality it was about common
sense, consideration, and responsibly sharing the citizens band with
others. But thats only partly why you are getting so much flak about the
clipped clarifier the main reason is that your technical info is just
plain wrong.

Near 300 posts in this thread I hope people are learning something.....

531. CW Requirement Removed for HF Access by WRC 2003

Newsgroup: rec.radio.cb
Date: 2003-07-08 07:30:00 UTC
From: "Leland C. Scott" <no-spam@junk-mail.net>
Message-ID: <m0ydnTyXdJRn75eiXTWJkA@comcast.com>
Source record: 162065

At the conclusion of the last WRC on July 4th the requirement for CW testing for HF access is now left up to the individual countries. Rumor has it that the UK may be the first to drop the test.

http://www.radio.gov.uk/topics/amateur/consult/condoc-morse-75ghz-sats-rev120603.doc (See section 2 on page 1.)

Read the details of the WRC report at the URLs below.

Happily, I can say they sure are. Particularly on channels 36 through 40 on SSB. Nice QSOs too. (Starting to hear more "QSX and standing by," rather than "QRT and standing by.")

Just depends on how serious the user wants to be... and if they are using radios for business and or personal communications.

Most common people trying radios don't want to even think about them, its enough to figure out how to push the transmit button.

So the simplicity and low cost of an FRS radio is the big deal. Only the shorter range keeps them from really becomming a lot more common place.

If you want more range, you can easily apply for a business radio license which would give you 10 to 25 watts of power, more than enough for most short haul direct conversations. Notice some of the latest radios are combination FRS and GMRS Radios... drives a lot of GMRS repeater users crazy.

*****

I have friends using CB for business... when the long path band conditions are wacky, a mutual friend in Mexico might have to relay a message back to the mobile which is only 15 miles from the base. Most people are not going to even try to bother with it.

*****

FRS is popular, I can hear and talk back to a lot of users from a 2500 foot mountain top site. Put one of the silly simplex repeaters on the air from the same mountain and watch the fun begin.

cheers

yes here is a sample question from element 3A....congratulations scott
you must be a genius to know this kind of stuff....

6 T2A15: What is the proper way to ask someone their location when using
a repeater?
A)Say, "What is your QTH?"
B)Say, "What is your 20?"
C)Say, "Where are you?"
D)Locations are not normally told by radio

>fence, and we'll be done."
>
>They say the old man made it back to town a full 5 minutes
>ahead of the boy on the bike.

Definition of the SuperBowl
If 10,000 CB'er's are on the SuperBowl
then only 1000 can be heard some of the times
& only 100 can be heard most of the times
& only 10 can be heard all the time

This is a great example why the bowl is not for the weak!

There was a guy walking down the street in San Francisco, and he tripped over an old looking oil lamp. He picked it up and hid it under his jacket, because he thought it was priceless. While he was running to the antique shop to cash this puppy in, it rubbed against his shirt. *POOF* A genie popped out of his pocket!

The very angry looking Genie said, "all right, I have had enough with this three wish stuff, and 'cuz you stole me away from my HBO Special, I will only give you one wish!"

The surprised man said, " OK, I want to live in Hawaii in a huge condo on the beach with three million dollars in the master bedroom, but I am afraid of boats and planes so I want you to build a bridge from here to Hawaii."

The genie replied with a smirk, " Are you crazy? Do you know how long that will take, with the pillars going down to the bottom of the ocean, all the cement it would take for the highway? No I'm sorry, it just can't happen."

The man said with a smile, "Fine then, I want to understand women."

The genie said, "Would you like two lanes or four?"

Bummer. Sounds like few minutes of study would do
it for you next time. Wish you luck.

>Your turn, Leland.

I'm thinking about it. I don't really feel like
taking the test and then have the certificate go
to waste simply because the FCC took more than a
year to officially drop the requirement. On the
other hand it's only 10 bucks to take the exams so
all I have to do it see which up coming Hamfest
has VE testing. I would take the General and Extra
written exams in the same sitting just to get it
over with and out of the way. Looks like my next
stop is the ARRL web site to check out when and
were a convenient license testing session is being
held.

My understanding is those so-called combo FRS-GMRS radios don't have the required PL tone generation circuits in them to activate repeaters. Plus they don't have any offset capability either which is also required to use a repeater system. And, I could be wrong here, but I thought that the GMRS repeaters you have to pay for access. They are not the free and open type of repeater you commonly find in Ham Radio V/UHF operations.

Find yourself a club aligned with a VEC. My tests
have been free. Right up the street on the first
weekend of every month. I've got until August
2nd or 3rd to thumb through the book. I'm reading
the sections, not even looking at the questions.

Good luck right back.

Bill, to give you a more accurate answer we need bit more info.
What amount of power will you be using?
There is a local out here selling a brand new single coil Predator 10K for $50.
Of course shipping is gonna be $10-15.
I think if you arent running much power the Wilson will probably be fine.
To the person who said Predator antennas werent any good, come on. It's an
antenna!
That's it. I think most of these mobile verticals will perform just about the
same.
Main difference is power handling.
My 2 cents.... 333 Mobile Springfield MO

"Got RF?"

Wouldn't it be more efficient to just shift the carrier 1750 Hz and run A1 instead of A3H? Like, something on the order of 500% more efficient?

You should be all set. A couple of watts should net you an easy 8 km between handhelds. A gain antenna would allow you to run the radio at reduced power (if it has that option - very likely), which would extend the time between recharges on the battery.

Leland,

You are absolutely correct concerning the repeaters. The owners of the repeaters monitor them too. Someone doesn't pay, they get shut off in a hurry. When I worked in a shop, the move was up to trunking radio (800 MHz) where the radios had a digital id and it was much easier to control access.

FRS is seperate, completely and entirely from the Citizen's Band
service.

damn..... all your enemies are becoming your allies.....cool!!!!
pretty soon all the kc's will be hammies.......then what???? i always
say if you can't beat em, join em.......hell we can play music and
cuss on the ham bands just like on the cb band......no pain , no
strain......

No that would make you stupid. Moped has always asked why hams hang in this
NG, I only asked him the same he and a bunch of the keyclowns ask hams why
are they there if their not hams.

Gw, it is never too late to join the fraternity, but get it while they still
have a code test so they don't call you an extra Lite.
Bang !! Bang!!

Please help me find a store or anyone that has the Super Lance CB antenna for sale. I thought I could get it but it seems that they no longer make it. I need it bad because it's only 3 feet tall and doesn't show much on the roof.

My community association approved me to put up this antenna and now I can't get it. It seems that whoever I call tells me that they just sold the last one.

Please help me!! Thanks!!

You might be better off with an attic antenna, if that option is
available to you. 3 feet is TOO short.

They're begging for newbie's, there's nothing wrong with some
new blood, and a better attitude. I expect the no-code will
-really- keep the self police pretty busy.

It will give guys like Jerry fairly busy.

been feeling dizzy.

Sorry for the delay, my system went down... I could not start Windows, as Explorer was reporting an error and shutting down. I have had use the old "Program Manager" interface and backup files before re-installing everything. Unfortunately, Progman does not support long filenames, so I have then had to work out the real names of files.

I have not heard those rumours, or anything more about Foe after the death. I don't follow Football like my Son does, but I believe that there was also a manager who had a Son die the same way, playing Football.

Regards,

Peter.

Well I al ready have a Wison 5000, but I had heard that the free air coils were some of the best loaded antennas, so that is how this discussion got started. And as far a F'in up the band, I don't do that stupid crap, just ruins it for everyone.

593. Set up on Off-road rig

Newsgroup: rec.radio.cb
Date: 2003-07-09 12:07:01 UTC
From: John Henry <jo_henry@hotmail.com>
Message-ID: <j01ogvgl8ue1dh2rcnic42hul4gfb9aif1@4ax.com>
Source record: 162171

Hi, I originally bought this cheap set up as something to just work offroad, but now I desire more on the highway. I currently have a cheapy Maxon 30 (mobile walmart special) and the $20 3 foot whip mag mount Rat Shack special. How does a ground plane work? Does it need to contact the metal on the roof or just be above it? Ive considered mounting it to my roof rack, but am not clear on how ground plane works. Will going to a more expensive radio help alot, and are base loaded antennas (like k40) any better then a plain whip? Thanks in advance for help with all these questions. (I have tuned the antenna to less then 1.5 SWR on all 40 channels in current set up)

Well I al ready have a Wison 5000, but I had heard that the free air
coils were some of the best loaded antennas..

_
As far as power handling capacity,,,they are. Finding a linear in and
around Jersey shouldnt be a problem, but you may wish to look at Texas
Stars. Several hammies use them because they claim they are way cleaner
than certain other amps.

I'm thinking about it. I don't really feel like taking the test and then
have the certificate go to waste simply because the FCC took more than a
year to officially drop the requirement. On the other hand it's only 10
bucks to take the exams so all I have to do it see which up coming
Hamfest has VE testing. I would take the General and Extra written exams
in the same sitting just to get it over with and out of the way. Looks
like my next stop is the ARRL web site to check out when and were a
convenient license testing session is being held.

_
Shux, since the nocode license was introduced, the behavior you speak of is rampant on 2 meter.....also 6 meter has taken it's share of black eyes since N8WWM was licensed and found to be a jamming problematic hammie. One needs only look to the failures who attempted defending his jamming actions and federal law breaking, for illustration of the behavior I speak of. A lid on the hammie bands is a lid on the cb is a lid on the internet. A lid is a lid. Lifting of the code requirement will add to the trash.....we will then be looking to the cb for a means of escape, much as many have done since 2 meter was scrapped to the licensed cb plug and players.....the only ones who disagree that the elimination of code will not be disadvantaging are nocodes. The floodgates were opened with the introduction of the codeless license, now the damn is about to burst. Sew and so ye shall reap.

i bag the uk.rec.radio.cb ng. by your definition does that mean i'm
english?

>No that would make you stupid.

So let me borrow YOUR phrase and claim,,,,seeing what N8WWM did, by your
definition he is a federal criminal "Keyclown." He was deemed guilty by
the FCC for worse "crimes' than what you attack and accuse others of
doing.

>Moped has always asked why hams hang in

>this NG, I only asked him the same he and a

>bunch of the keyclowns ask hams why are

>they there if their not hams.

Hey Swamp Angel, ask the King of Clowns, N8WWM, why he was jamming the
amateur radio service. That isn;t conducive to the hammie creed,,in
fact, not only is it rude, malicious, and hateful, it's also illegal.

I kinda agree with Frank here. The folks that'll likely take an interest in
this are the 11-meter "hobbyists," 99.9% of whom operate SSB. I copied some
(Approx. 15) Sugar Delta stations operating CWon ch. 38 USB a week or so
back. Sounded like a contest, but what was particularly interesting was that
they were working each other on USB while folks enjoyed fairly interference
free voice on LSB. Strange world, eh? The ITU drops CW as a req. for HF on
ham...while folks work CW on CB...go figure.

A CSCE is only good for 365 days. My General CSCE is only good
for 362 days now. I either have to learn code or wait for the
removal of Element 1 in the next 361 days. Tech is the only
class one can have without CW at this time.

The best you can get is a 1/2" copper pipe 109" long with a cap on one
end, and a 3/8x24 threaded cap on the other, reinforce it, done deal.

1. Power Handling (You will burn up your equipment before you burn the
pipe up.
2. Broadbanded.
3. No loading coil.
4. Build for $15
5. Great for Tree Trimming!

The only way to beat it is with a beam using a folded dipole as your
driven element.

Large coil antennas are cool at lower power, but at higher power, the
coil and the stinger become an antenna tuner. which means that 18"
section below the coil becomes the only radiating part of the antenna.
Top load coils are better just rare unless you look into something
like a Texas Bug Catcher. That will not handle more than 2000 watts
though.

Trust me, been there, done that. I have a big CB antenna boneyard to
prove it...lol

Phineas

I read in a CB book many years ago, that the current stops at
the coil. Learning more about electronics later, I determined
that inductive reactance is the mechanism that impedes the flow
of AC current. Coils and capacitors are equal and opposite.

Coils pass DC and resist AC more as frequency increases.
Voltage leads current by 90 degrees, aka +j
Coils look longer to an antenna circuit.

Caps block DC and resist AC less as frequency increases.
Voltage lags current by 90 degrees, aka -j
Cap look shorter to an antenna circuit.

In another group I need to post this to as well, someone
asked about Z, X and R.

R is the DC RESISTANCE of the circuit, as can be measured by an ohmmeter.
E=I*R I=E/R R=E/I
These same basic formulas hold true in AC circuits, but are modified.

X is the AC REACTANCE of the circuit. It acts as a resistor to the AC,
but is not an actual resistor. The basic formula for X:

Xc=1/(2PI*F*C) Xl=(2PI*F*L)

2PI is a constant in electronics algebra. 6.283
F is frequency in MHz, 27.185 not 27185 KHz
C or L in full decimal amount, 50ufd=.00005, 1mH=.001

Z is the total IMPEDANCE seen by an AC source.
It is the SUM of R and X.

NOTE: I don't use this everyday, so if I have a number wrong, just
let me know, nicely, thanks.

Even my $10 Cobra FRS radio has to meet some tight specs. See the last line:

[Code of Federal Regulations]
[Title 47, Volume 5]
[Revised as of October 1, 2002]
From the U.S. Government Printing Office via GPO Access
[CITE: 47CFR95.627]

[Page 536]

TITLE 47--TELECOMMUNICATION

COMMISSION (CONTINUED)

PART 95--PERSONAL RADIO SERVICES--Table of Contents

Subpart E--Technical Regulations

Sec. 95.627 FRS unit channel frequencies.

(a) The FRS unit channel frequencies are:

Channel No.	(MHz)
1	462.5625
2	462.5875
3	462.6125
4	462.6375
5	462.6625
6	462.6875
7	462.7125
8	467.5625
9	467.5875
10	467.6125
11	467.6375
12	467.6625
13	467.6875
14	467.7125

(b) Each FRS unit must be maintained within a frequency tolerance of 0.00025%.

i bag the uk.rec.radio.cb ng. by your definition does that mean i'm
english?

>No that would make you stupid.

So let me borrow YOUR phrase and claim,,,,seeing what N8WWM did, by your
definition he is a federal criminal "Keyclown." He was deemed guilty by
the FCC for worse "crimes' than what you attack and accuse others of
doing.

Ok twisty, As duly noted as you stray far off topic, next time try to stay
relevant but i will humour you Please provide facts, such as
docket #, FCC reference's something to back your claim that N8WWM was indeed
found "guilty" of any crimes. Can you do that nutcase?

>Moped has always asked why hams hang in

>this NG, I only asked him the same he and a

>bunch of the keyclowns ask hams why are

>they there if their not hams.

Hey Swamp Angel, ask the King of Clowns, N8WWM, why he was jamming the
amateur radio service. That isn;t conducive to the hammie creed,,in
fact, not only is it rude, malicious, and hateful, it's also illegal.

Due stay on topic twisty, It is a rabid pattern of yours to try and change
the topic your communication deficit
is showing and your status as a troll is growing.

Of course he can't. That's why he used the word "deemed" (i.e, to think;
believe; suppose).

Semantics is Twisty's way of trying to make his 'beliefs' sound credible. But he
doesn't realize that he looks like a baffoon when he ridicules others for not
catching his carefully worded escape-routes, because he ends up discrediting his
original statements with his own rhetoric.

So let me borrow YOUR phrase and claim,,,,seeing what N8WWM did, by your
definition he is a federal criminal "Keyclown." He was deemed guilty by
the FCC for worse "crimes' than what you attack and accuse others of
doing.

>Ok twisty, As duly noted as you stray far off

>topic,

I wasn't the one that brought "stupidity" into the subject and made it a
topic. Check again,,your comunication deficit is affecting what see and
read,,.

>next time try to stay relevant

It is relevant. Another mentioned it, I added so,,

>but i will humour you

Not as much as I humor you.

>Please provide facts,

Tell it to he FCC.
They are the ones that said he did the actions. We all saw it and it is
still there if you know how to access said information.

> such as docket #, FCC reference's something
>to back your claim that N8WWM was indeed

>found "guilty" of any crimes. Can you do that

>nutcase?

I'm married and heterosexual, therefore I won't "do" any nutcase, let alone N8WWM..please stay on topic and keep your homosexual remarks confined to yourself or find the appropriate forum. Again, you were probably i the county jail when he was popped,,hey, check it out,,...here's a deep thought, check the google archives.."N8WWM", "FCC", "Violations" "Jamming" and "repeater" ought to do it. Since you are inquiring so much about the misdeeds and miscontributions of N8wwm, I suggetyou contact the Toledo Amateur Club and ask them for their input...they are only more than willing to share.

_
>Of course he can't. That's why he used the

>word "deemed" (i.e, to think; believe;

>suppose).

I believe Frank was in the county jail when it happened.

>Semantics is Twisty's way of trying to make

>his 'beliefs' sound credible.

How can a belief be anymore than just that...a mere belief? Boy, your head sure is twisted,,LOL.

>But he doesn't realize

The only thing I dont realize, along with the majority of cbers resent, is you,,LOL...and you're ego is so heavily involved that you are like a rabid animal, out of control, lashing and snarling in all directions because no one will pull out the splinter I jammed in your paw..LOL.

that he looks like a

>baffoon

LOL.....that's "b-u-f-f-o-o-n"......Hahahhahaahahhahah!

You could try the General again. The new Extra
written exam is a combo of the old Advance and
Extra exams. The old Advance exams I'm told was
the most difficult out of the bunch to pass, and
the General was fairly easy.

Just a thought here. True the FRS units are a commodity (selling price near the higher end throw-away cameras) and their range is limited, but they don't have to contend with skip. One possibility might be MURS. With a 2 watt limit and a much more efficient antenna than the 27 MHz units, these may make a lot of sense (especially if they get the prices down). I would expect 5 miles between handhelds on MURS (but then, I may be ever the optimist :)

73 from Rochester, NY

630. Hammie told: "Get Your Addy Right" by FCC!

Newsgroup: rec.radio.cb
Date: 2003-07-09 22:14:40 UTC
From: twistedhed@webtv.net
Message-ID: <27346-3F0C93D0-56@storefull-2311.public.lawson.webtv.net>
Source record: 162167

Right here in the 'pile...an 'ol boy hammie was funnin' (?) around and jamming a repeater on 146.790 mhz,,,,,Feds told him he must "take immediate action" to make certain the database (which is public knowledge) contain his address where he reside, and not merely a contact address as he provided. Some hammies are sticklers for the rules. Some go to harassment levels, as seen by several hammie-lids and self-professed "AKCers" who come here to harass cbers for mundane things such as a few extra watts, modded radio or clipped modulation.
I agree with JerryO in the aspect that he said some good cbers and hammies will undoubtedly be hurt by the bad laws passed by the power-hungry. Jerry has always felt it a duty to report such radio villains, and so has Frank (going as far as claiming it was his MORAL duty and obligation to needlessly harass cbers). Reporting these scofflaws is the right thing to do, they each claim..so be it.
Been wronged by a hammie? Sent a virus by a lid? Constant attacks in the ng have ya' frustrated to say your piece in fear of retaliation? Send the name or call sign of your favorite lid to FCCHAM@FCC.GOV if you suspect they are breaking the rules or residing somewhere other than the address they provide the FCC. The FCC will do the rest.
It is unfortunate there exist those who feel such extremes must be taken, but the law is the law and it was not constructed for hammies who happen to be lids to hide behind and abuse cbers as they see fit. We have heard it a thousand times, "follow the proper channels".....this is one of them.

Source record: 162163

Well I am just running 10 watts out the radio right now, and I would like to run a 250W linnear in the future. I know that the W5000 can handle that easily. I had just heard that the open air coil antennas helped improve TX/RX range greatly, so I figured I would look into it.

"Twistedhed" <twistedhed@webtv.net> wrote in message news:20396-3F0C15CF-30@storefull-2312.public.lawson.webtv.net...
From: wbaumann20@hotmail.com (William Baumann)
Well I al ready have a Wison 5000, but I had heard that the free air coils were some of the best loaded antennas..

_
As far as power handling capacity,,,they are. Finding a linear in and around Jersey shouldnt be a problem, but you may wish to look at Texas Stars. Several hammies use them because they claim they are way cleaner than certain other amps.

Maybe over flat unobstructed ground (which is the optimistic way they rate
distance anyway, but who lives at Bonneville Salt Flats?), but in the real
world, usually a bit less. I have used MURS at the deer lease though, and in
wooded and slightly hilly terrain, we were getting around 2 miles at near
full quieting, with one watt and the tremendously inefficient rubber duck
antenna.

All the time, I hope. BTW, many never mention that the larger 11-meter groups are usually comprised of a good many hams as well. The CW I copied was definitely SD's, so you're likely quite accurate. Take care now. ;-)

Good post Twistedhed,

Being a CB'er WITH a radio that is pushing extra watts, and is modded, one of the biggest reason that CB'ers "act stupid" by running huge amounts of power, as well as all the other crap they do (you know what I am talking about) is mainly because of a few hammies running down into the base 40 harassing them. I mean think about it, if you have a hammie running 1600W stomping on the local cb channel. You couldn't talk to another person that was 6 blocks away without running power. And like hell anyone is going to let 1 or 2 hammies shut down the local channel.

Now I agree, there are cb'ers and hammie's alike that are just a@@holes who need to be reported, shut down and be kicked in the nuts.

Salut

If an audio signal (cosine) with 4 KHz of frequency and 10 V of amplitude modulates a carrier of 100 MHz, with a percentual modulation of 85%, does the carrier have 11.76 V of amplitude?

Supposing that the transmitter power is of 1 kW how can I know the power of the carrier and sidebands? How can I know this values in Watt, dBW and dBm?

If I just hadn't fluke the exame...

Thank everybody in advance, Marco.

Let me hop on the Uniden band wagon. I have a Uniden PC 68LTW I purchased from the Amateur Electronics Supply in Cleveland (www.aesham.com/). The weather alert works great, the night viewing is great, the controls are easy to get used to. Best of all it fits in the hole where my ash tray was in my old Chevy, so it looks in dash mounted (160mmWx217mmDx55H). Plan on using an external speaker . I have had it 7 months, great radio.

>duty and obligation to needlessly harass cbers).

Where did I say that, Twist? I didn't. You are misquoting me yet again. I'm
suprised you didn't misquote the late Dick McCollum in your latest rant, like
when you claimed he said freebanders could use his call "in case they work
anything real exotic." But I'm sure you will try again in the future -- you
don't let anything stop you in your encouragement of lawbreaking, not even
respect for the dead.

> Reporting these
>scofflaws is the right thing to do, they each claim..so be it.
>Been wronged by a hammie? Sent a virus by a lid? Constant attacks in the
>ng have ya' frustrated to say your piece in fear of retaliation?

Been wrongfully accused of child molestation, homosexuality, and being five
different hammies? Had keyclowns post what they thought was your phone number
hundreds of times in the newsgroup with instructions on when to call and how not
to get traced? Yeah, let's talk about harassment, Twist:

www.aimcomm.net/sparky/twisted_forgeries.txt

> Send
>the name or call sign of your favorite lid to FCCHAM@FCC.GOV if you

>channels".................this is one of them.

Yes indeed, Twisty -- "the law is the law" -- ignore it when it suits you, and come running back whenever you don't like someone on a newsgroup. What a hypocrite.

>

The 'R' is not DC resistance, it can not be neasured with an
ohm meter. It is 'radiation resistance', an imaginary quantity.
One ohm of 'radiation resistance' dissipates the same power as
a one ohm resistor would. There isn't any way of measuring
radiation resistance directly, it has to be found by measuring
indirectly, and that's what the antenna analyzers do. They
measure the current and voltage to the antenna and then compute
the 'R' (radiation resistance). It's one of those things that
acts just like something, but really isn't...

> 'Doc

Scott was just reviewing the basics. Where he referred to "R" was Ohm's law, and
was absolutely correct. However, he did make one mistake:

>Xc=1/(2PI*F*C) Xl=(2PI*F*L)
>
>2PI is a constant in electronics algebra. 6.283
>F is frequency in MHz, 27.185 not 27185 KHz
>C or L in full decimal amount, 50ufd=.00005, 1mH=.001

For that formula, "F" is the frequency in Hz; i.e, 27185000 Hz.

Marco Ferra wrote:

Salut

"If an audio signal (cosine) with 4 KHz of frequency and 10 V
of
amplitude modulates a carrier of 100 MHz, with a percentual
modulation
of 85%, does the carrier have 11.76 V of amplitude?"

No. The audio signal isn't measured in volts, but in watts.
Otherwise, you have it correct percentually. You can't mix
volts
and watts.

"Supposing that the transmitter power is of 1 kW how can I know
the
power of the carrier and sidebands? How can I know this values
in
Watt, dBW and dBm?"

The simplest way is to measure the output of the modulation
stage
and the carrier, then add them. Otherwise, you have to know the
percentage of modulation to 'work backwards' to find the the
output
of carrier and modulation stages.
I don't find the use of measuring with 'dB' of any use, so
can't
tell you how to convert between units. Sorry...

Working on my brothers boat, a 16.5 foot outboard trihull (yes its old) ...
I am unsure of what antenna will work... Mag mount is out,, due to
fiberglass hull and I dont know how to setup a "normal" antenna to work
correctly... any suggestions as to ground return or no ground antennas...
This will be a normal 40 channel am only radio... NOTHING extra..

Bob

A 1 KW carrier will be modulated 100% with 500 watts of high level
modulation. You end up with 1,000 watts of carrier, 250 watts upper
sideband, and 250 watts of lower sideband. Most inefficient.

73 from Rochester, NY

If you are using extra power and a modified radio then you are an
ILLEGAL CBer, not just "a CBer".

>one of the biggest reason that CB'ers "act stupid" by running
>huge amounts of power, as well as all the other crap they do
>(you know what I am talking about) is mainly because of a
>few hammies

So let me get this right: you're saying it's MAINLY A FEW HAMS FAULT
that you and others like you operate illegally? You mean all those
overpowered guys on channel 6 are only doing it because a few HAMS are
FORCING them to do it? Jesus Christ On A Stick, that's got to be the
LAMEST excuse I have EVER heard from a keyclown. It's a Hall Of Famer.
It's Oscar material. Whew, If there was a Keyclown Lifetime
Acheivement Award, it'd go to you for concocting the least believeable
excuse ever written. I am awestruck that anyone can be that feeble
minded. Ludmilla must go to the kitchen and fetch me a glass of iced
tea because I am momentarily immobilized by your stupidity. Let me
take a moment to recover from your unabashed doltishness.

There, that's better.

>running down into the base 40 harassing them.

The "base 40"? You mean the ONLY 40 don't you? "Base" would imply that
there are other channels available to you and authorized for your use,
which there are not.

One or two hams, huh? Hmm. How do you know they are hams? Did they
give their call letters on CB? Or did they just say "I'm a ham" and
you believed them? But I'll give you the benefit of the doubt. Let's
say they are hams. If you're certain they are hams, you must have

proof, i.e. you know their call letters. Instead of running illegal power, risking fines, imprisonment and the stigma associated with being a federal criminal, wouldn't it be simpler and smarter for you to report them to the FCC? Riley H. has a good track record of following up on such complaints, check the Rain Report if you wish confirmation of this. That way, you could get some action and solve your problem. But no, you'd rather call hams names and threaten bodily harm to them in a CB newsgroup. Not very sensible, Baumann. But then people trying to think up idiotic excuses for why they operate illegally seldom are.

That is not correct. To 100% modulate an rf carrier the audio power must equal 50% of the unmodulated carrier power. It takes 50 watts of audio to 100% modulate 100 watts of carrier. This is assuming high level modulation where the audio is applied to the output stage. At 100% modulation power is increased 1.5 times the unmodulated carrier power. So for 100 watts with 100% modulation, the output would be 150 watts, with 100 watts in the carrier and 25 watts in each sideband. Get a book and look it up.

While he certainly can help you break a number of federal regulations,
he also offers some things which "appear" to provide a legal
performance boost.

I don't have the background or education to know if these things are
the CB equivalent of snake oil, or if they really work. I would
appreciate the comments of the many technically proficient members of
this newsgroup.

In particular, I'm looking at the plans for his CP beam antenna and
the Digital Speech Processor kit. I have the skills required to
construct either, but not the knowledge to know if either project is
worth the effort.

Your advice and guidance would be appreciated.

Thanks,

Earl Johnston

Hi Earl,
Welcome to rec.radio.cb, you have just been introduced
to Frank. While Frank is some what knowledgeable about
cb, he seem to be more interested as of late to troll. He's
seemed to wander off from his statement of months back
that he would not troll anymore, but drop in from
time to time debunk cb "snake-oil myths".
While he's bashing Lou for "legalities", he himself has
offered to build a linear, for a "high" price, so he's being
a little, oh let's use one of his favorite words.....
hypocritical. He has answered many questions concerning
cb, he does it in such a technical way that you won't get the answer for "how much length
of
coax do I use", you will
get the exact formula straight out of the book instead of

use 10' or what ever is needed.
While there are a few trolls here (those people are
very obvious by what they post), most people here
are more than willing to lend a hand to help.

Landshark

> let me know, nicely, thanks.

I basicly said this without all of the extra math. People forget that a signal IS AC not DC. 2 other factors are involved also.

1. K=(Surface area/Wav Length)
2. Q=X/R

I am not going to go into a tech manual, but you will find that top load antennas have a high Q, and will usually have better reception. Usually the higher the Q, the better the receive, and the less noise you will have on recieve also. However, because of the high inductive reactance, the bandwidth is quite small.

Large coil antennas have a lower Q. These antennas are far more broad banded. Partly due to that K factor. The larger you surface area, the more broadbanded your antenna will be. However, you will gain noise, and loose some of your receive sensitivity. The only problem is that at extremely higher power, your Q goes up because your resistence and your reactance changes.

The reason that a wilson 5000 works as well is all the coil does is tune the line to the stinger(Whip) to the radio(Or tune the line to 50 ohms). In other words Wilson 5000s have a matching network that tricks the radio to think that the short stinger is 50 ohms. This technique is often used on shortened antennas for lower amatuer bands. The Wilson5000 is a good antenna, is easy to use, etc, but it is still a base loaded antenna.

Phineas

Circular polarization of a signal is caused by "Faraday rotation" as a signal passes through the upper atmosphere, and occurs mainly with frequencies from 100 to 1000 MHz. Unless you plan on tuning in on satellites in that frequency range, an antenna designed for circular polarization isn't going to do much good. IOW, the term was probably adopted into CB mythology to describe a helical antenna, which is no more efficient than any fiberglass stick antenna, and less efficient than an unloaded whip.

Nearly all CB radio antennas are vertical, and therefore vertically polarized. You are wasting your resources trying to make an antenna that's capable of receiving both vertical and horizontal polarization. For lots of antenna information, here's a good place to start:

http://www.ac6v.com/antprojects.htm

> and
>the Digital Speech Processor kit. I have the skills required to

A speech processor is an excellent idea, but I have no idea if Lou's even works. I certainly have some misgivings about 90% average modulation! But since you have some electronic skills, check this out:

Really? Is it hypocritical of me to try and discourage illegal amps? Why don't you quote that 'offer' again, Hypocrite Landshark? You know, where I said that I'll do it for a price, but if he wants it for illegal CB it will be a much higher price? Did you ever email the other person to find out what we talked about via email, how I enouraged him to get his license? And that he didn't take me up on my offer? No, I don't suppose that you have very many facts at all, Hypocrite Landshark.

> He has answered many questions concerning
>cb, he does it in such a technical way that you won't get the answer for "how much length of

Only when prompted. Maybe you should go back and read my many posts where all I say is to use whatever length is convenient, PROVIDED: You have a good RF ground at both ends, roll the excess into a figure-8 and not a loop, and DON'T use foam coax. But I suppose you were only paying attention to the posts that you thought were somehow inappropriate, huh?

> While there are a few trolls here (those people are
>very obvious by what they post), most people here
>are more than willing to lend a hand to help.

Then why didn't YOU offer any advice on the topics he was asking about? Go whine somewhere else, Hypocrite Landshark.

I did, some time ago and here is what I found. Just for
you....from "The Radio Amateur's Handbook".

This is concerning the amount of audio power to modulate a carrier.

"The modulator must be capable of supplying to the modulated r.f.
stage sine-wave audio power equal to 50 per cent of the d.c. plate
input. For example, if the d.c plate power input to the r.f. stage
is 100 watts, the sine-wave audio power output of the modulator
must be 50 watts."
"With a sine-wave modulating signal, the average power in a 100
per cent modulated wave is one and one-half times the value of
unmodulated carrier power; that is, the power output if the
transmitter increases 50 per cent with 100 per cent modulation."

From "Elements of Radio", by William Marcus
"It can be calculated mathematically that the average power of the
modulated carrier is one and one half times that of the
unmodulated carrier. Since this 50 per cent increase in power must
come from the modulator, the audio frequency power must be ONE
HALF the unmodulated carrier."

In other words Doc, for 100% plate modulation of a 1000 watt
carrier you need 500 watts of audio. Your calculation that 1000
watts carrier divided by 500 watts audio equals 50 per cent
modulation proves you know nothing about the subject.

A few companies manufacture antennas for use on trucks with fiberglass bodies, perhaps these might help. You also might try grounding the antenna to the battery. If you can ground the antenna to the battery, then you can use a normal antenna, with a clamp type mount, and mount it to the rails on the side of the boat. Thats what I did for my boat.

What ever book it was, it either failed to correctly explain
modulation or doc couldn't comprehend it. I suspect the latter.

Que Tal Marco...

: If an audio signal (cosine) with 4 KHz of frequency and 10 V of
: amplitude modulates a carrier of 100 MHz, with a percentual modulation
: of 85%, does the carrier have 11.76 V of amplitude?

If you use a carrier of 100MHz, we would assume you to be in the common US FM Broadcast band. Many people refer to the audio signal as a sine wave. (Unless we want to talk cofunctions... probably not.)

: Supposing that the transmitter power is of 1 kW how can I know the
: power of the carrier and sidebands? How can I know this values in
: Watt, dBW and dBm?

At 100% modulation or at 85%..?

You can know the values by assuming a reference or knowing what the reference is. dB might assume a starting point, reference power level supplied/measured by you.

dBm often refers to a power level referenced to a milliwatt value across a termination resistance. Other examples to research might be dBc, dBrnc and similar labels.

: If I just hadn't fluke the exame...
: Thank everybody in advance, Marco.

Assuming you are working with an AM signal, one of... if not the most accurate way to measure the complex output signal would be with a scope properly connected.

The ARRL Handbooks provide a measure of reference information... some of the vintage handbooks are better at describing AM which was most popular in the 50's through the 70's.

cheers

Although they teach AM wrong, like the question on the amateur exam.

For AM look here:
http://www.cbtricks.com/~kd6tas/amsig.htm

This is the correct information which can be verified by reading
chapter 4 in the RF Technician's Handbook, 2nd edition, by
Cotter W. Sayre, 621.38.

and jamming a repeater on 146.790 mhz,,,,,Feds told him he must "take
immediate action" to make certain the database (which is public
knowledge) contain his address where he reside, and not merely a contact
address as he provided. Some hammies are sticklers for the rules. Some
go to harassment levels, as seen by several hammie-lids and
self-professed "AKCers" who come here to harass cbers

>Not CBers, Twist: Illegal operators.

You lie. You and your ilk have accused cbers and hammies alike of being
illegal or catering to illegals merely because of their topics. You most
certainly have expressed your venom, and indeed, harassed legal, law
abiding operators for their topic of choice. You most indeed hae
attacked and harassed those for responding to a post you feel should be
censored, merely because the content may offer informational
instructions that when actually employed may break the law pertaining to
cb or amps. Since you can not handle such adult topics with proper
communicative technique, you should ignore that of which offends you
instead of attacking the character of one who asks a question about a
linear.

_
for mundane things
such as a few extra watts, modded radio or clipped modulation. I agree
with JerryO in the aspect that he said some good cbers and
hammies will undoubtedly be hurt by the bad laws passed by the
power-hungry. Jerry has always felt it a duty to report such radio
villains, and so has Frank (going as far as claiming it was his MORAL
duty and obligation to needlessly harass cbers).

>Where did I say that, Twist? I didn't.

Sure you did. Go check your post from where I took my cool new
sig,,,want me to add the part where you claimed it was your moral
obligation to do so? Perhaps I shall, only after you are made to face
your quotes..hurry,,,"google" it....it's there....:)

>You are misquoting me yet again. I'm suprised
>you didn't misquote the late Dick McCollum in

>your latest rant, like when you claimed he said
>freebanders could use his call "in case they

>work anything real exotic."

That realy bugged ya' eh? But then again, many little things you have no control over upset your little tummy.

>But I'm sure you will try again in the future --

>you don't let anything stop you in your

>encouragement of lawbreaking,

I don't encourage lawbreaking, Frankie..never did..in fact, many of my posts say the opposite,,,,learn for yourself the risks prior to undertaking them......referring to my masterpiece that has you swamp-angeling is null also, as Lelnad KC8LDO brought it forth (after searching like mad the internet for anything remotely related to "twistedhed",,LOL) to the group in an effort to start shit, much like yourself has mastered.

>not even respect for the dead.

I have the utmost respect for the dead. KC8LDO is just pissed because he continues to be haunted by one who busted his ass for forging,,shortly after KC8LDO "found" the freeband article, he began his noise about "follow me to the hammie group, twist, PUHLEEZE" and when I refused, he forged me there and lost his ISP. Dick popped him and let the world know what a lid Lelnad is..

_
Reporting these
scofflaws is the right thing to do, they each claim..so be it. Been wronged by a hammie? Sent a virus by a lid? Constant attacks in the ng have ya' frustrated to say your piece in fear of retaliation?

_
>Been wrongfully accused of child molestation,

What's funny is you can't even post something that accuses you of such...you're the only one crying about it. N8WWM brought that shit to this group, not whoever managed to wreck your psyche.

>homosexuality, and being five different

>hammies?

At last count, you had "accused" me of being 4 different people..difference is, you're ate up over identity whereas I merely watch with temporary amusement as you swin at ghosts.

>Had keyclowns post what they thought was

>your phone number hundreds of times in the

>newsgroup with instructions on when to call

>and how not to get traced? Yeah, let's talk

>about harassment, Twist:

>www.aimcomm.net/sparky/twisted_forgeries.tx

Yes, lets. You thought it twas me that
did those things and you were wrong, you and Lelnad and Geogre..all
wrong,,see, I'm still here, but not one of you lids are with your same
ISP,,you can't help yourselves,,you're out of control. You thought it
was I that posted your phone number, etc....and in your ignorance,
retaliated with satellite pics of my neighborhood, as if that somehow
would be upsetting to myself,,,,Im not hard to find,,,anyone can find
me,,come on down and key it up.....I'm real easy to find, thanks to
you,,only, y'all did me a favor,,,y'all give me a bunch new radio
friends and made me worldwide by virtue of the moniker "twistedhed."
Forgeries? Certainly,,,Lelnad started it,,,N8 joined in, Charles Johnson
crossposted the forge, you added so,,,,,,,why attack the puss that
drains when the lesion was initiated by Lelnad? Grow up,

_
Send
the name or call sign of your favorite lid to FCCHAM@FCC.GOV if you
suspect they are breaking the rules or residing somewhere other than the
address they provide the FCC. The FCC will do the rest. It is
unfortunate there exist those who feel such extremes must be taken, but
the law is the law and it was not constructed for hammies who happen to
be lids to hide behind and abuse cbers as they see fit. We have heard it
a thousand times, "follow the proper channels".................this is
one of them.

_
>Yes indeed, Twisty -- "the law is the law" --

>ignore it when it suits you,

Unlike yourself, I am no hypocrite. Yes I freeband, and yes I
DX,,period. I admit what I do,,you lie about your behavior, just like
Hall lied about his past activities. You lids only pay attention when
you're grabbed by the collar and your nose is rubbed in your mess.
You cry about behavior on the cb that you continually demonstrate
here,,both are mediums of communication,,what gives you the right to act
like an ass on one while carrying on like a woman over one who acts the
same
manner on the cb? You're a hypocrite's hypocrite.

>and come running back whenever you don't

>like someone on a newsgroup. What a

>hypocrite.

My "liking" someone has nothing to do with replies to posts directed at
myself. Unlike yourself, the majority do not suffer great deficits in
communication and do not allow such strong personal feelings to enter
the equation. Its not about "me", Frankie-lite, as much as your life is
dedicated to making it so...it simply isn't about me.

Well I am just running 10 watts out the radio right now, and I would like to run a 250W linnear in the future. I know that the W5000 can handle that easily. I had just heard that the open air coil antennas helped improve TX/RX range greatly, so I figured I would look into it.

_
I'm a Wilson (old style) fan myself..although I do have a fiberglass whip I occasionally use from back in the day. I heard the company (is it Barjan?sp?)) that bought Wilson haven't changed much in design...(shug). I know the baddest mobiles around here have open coils and they all throw down with open coils at the key line,,,,mass fraud has been perpetuated against the public-at-large before (look at "JB Weld"), but I'm inclined to side with the big guns,,,hearing is believing. A very good friend has made a name for himself with his ricochet-skip dish and he uses an open air super-penetrator-type.... he definitely has a mobile to reckon with.

Mag mount is out,, due to fiberglass hull and I dont know how to setup a "normal" antenna to work correctly... any suggestions as to ground return or no ground antennas... This will be a normal 40 channel am only radio... NOTHING extra..
Bob
–

There are several things one can do..taking into consideration the boat is a tri-hull, fiberglass, and 16.5 foot, you probably won't be doing much talking when you're on the move. For outrageous performance on the water, get an antron and bungee that sucker anywhere you can. You could always try the smaller fiberglass no-ground antennas, compromising a bit,,but your signal will be greatly enhanced over water no matter what antenna you use. A poor performing mobile antenna on land will not suck nearly as bad when using it on the water. If you wish a more permanent solution, email me. Take some copper/strap wire for ground and toss that sucker overboard <g> and be prepared to do some talkin''......

>control over upset your little tummy.

Misquoting him not once, not twice, but MANY times, to promote illegal radio and to further your obsessive campaign against Leland, trying to ride Dick's shirt-tail -- those aren't "little" things, Twist. Well, they might be "little" things to an anonymous cartoon character such as yourself, but not to a man with integrity, a virtue about which you know nothing.

>>But I'm sure you will try again in the future --

>
>
>I don't encourage lawbreaking, Frankie..never did..

Quit frothing at the mouth and read your own posts -- you have promoted freebanding since day one. And since you have been reduced to the point where you no longer embellish your lies with equivocations or semantic spins....

hammies are sticklers for the rules. Some go to harassment levels, as
seen by several hammie-lids and self-professed "AKCers" who come here to
harass cbers

>Not CBers, Twist: Illegal operators.

You lie. You and your ilk have accused cbers and hammies alike of being
illegal or catering to illegals merely because of their topics. You most
certainly have expressed your venom, and indeed, harassed legal, law
abiding operators for their topic of choice. You most indeed hae
attacked and harassed those for responding to a post you feel should be
censored, merely because the content may offer informational
instructions that when actually employed may break the law pertaining to
cb or amps. Since you can not handle such adult topics with proper
communicative technique, you should ignore that of which offends you
instead of attacking the character of one who asks a question about a
linear.

I haven't been on a CB in a long time, but finally decided to fix or have fixed the handheld unit my dad gave me twenty years ago. I remembered keying the mike before attaching the rubber-duck antenna way back when, so I wasn't surprised when I couldn't get a radio check. Figured out which transistor was the final amplifier and replaced it, but now there's no one out there for me to call to. I live on the East side of Houston, where a lot of trucking goes on, and there was some chatter in the mornings a few weeks ago, but it has died out to nothing. Last time I heard anyone talking to anyone, some fool got on with a linear and walked all over everyone with his jack-assinine laugh. Every time someone keyed their mike he stomped on them, until everyone gave up. I have never in the past month or so been able to find anyone in the afternoons or evenings, and since that particular incident there's no one in the mornings either. Does anyone still talk over the CB, or has that more or less died out? In the past month I heard one fellow with a mondo linear talking to passing truckers a couple of times, but he was polite with it and now even he isn't there. Is there some other channel that truckers now use, other than ch 19? (I heard them there a couple weeks ago...) I occasionally hear trash in the background, but most of the time the air is totally dead. What's the deal?

Thanks,

Dave

That is the RMS amount. The PEAK value is 4 to 1.

100 watts carrier, 150 watts RMS, 400 watts PEP.

Hope that clears things up.

Forget a WT with a rubber resistor. It won't be heard for more than
a mile. Try hooking it to a real antenna. Also, the noise level is
much higher now then ever before.

Yes, I learned it's a good thing to stand back whenever you start forming loops
by chasing your own tail (tracer-routing people's IP numbers), because it
usually means that you are about to do something extraordinarily stupid. So did
you trace it far enough to see that the block holding his IP is subbed out from
AT&T to MCC in Middletown, NY? You must be REALLY paranoid to trace the headers
of people that agree with you.

Think positive, Jim. If CBers would put forth a little effort into organizing, they might be able to have some pull with the FCC. But, of course, that would only include legal CBers, since keyclowns are too paranoid to stand up and be counted like citizens. But I'm sure there are enough legal CBers that, if organized, could at least be a thorn in Powell's backside (just like WMDs are becoming for his kinfolk). It will only work if CBers really think the band is worth saving. If not then everybody loses. Like Twisty said:

"Any project one does to the best of their ability is worth the effort. Don't ever lose sight of that and don't ever allow another to tell you different."

We won't, Twisty: We legal CBers intend to hold the course in our attempts to save the Citizen's Band!

The problem here is that these hams who are obcessed with illegal CB
are probably not breaking any of the FCC rules, I belive some of them
would turn their own mother in if she went over 4 watts.
You'll have to catch them breaking some other law, maybe if see one of
these guys hanging around the truck stop with his camera looking for
Galaxy radios, call a cop and accuse him of being stalker or pervert
or lot-lizard.

Hmmm. I have the external antenna that this puppy came with, so I guess I'll hook it up to that for a start. What I can't figure out is that I don't hear anyone else talking. And I am exactly one mile from I-10, which is a major thoroughfare from Florida to California (truck city.) I do hear a fair amount of noise most times, but shouldn't there be some chatter as well?

Thanks for the reply...

Dave

My mix up Keith. I'm a bit out of it here the past
week or two. My dad died the first of July and
I've been busy running around arranging the
funereal services and trying to get his papers in
order. That's what happens when you're thinking
about one thing and trying to respond to something
else.

As I recall, Twist went through the same obsessive infatuation with me, Doug, Leland, QRM2000, Dave Hall, Kari, Kevin Muenzler, Dwight, Sparky, George, Doc, JJ, Jeff Herman ---it's hard to keep track --- let's just say virtually anybody that dared remind him of FCC rules for CB got exposed to his unique brand of circular rhetoric. It's nostalgic to read his latest emotional scribblings, but I am quite surprised that he's still trumpeting his backwoods outlaw radio nonsense in this newsgroup after all this time. And his posts look like alphabet soup because he STILL hasn't figured out how to quote. And yet, that very consistency is part of his oddball charm. Twisty, you slippery old scalawag, I hope you keep going forever. And I say those who want to "ban you from the newsgroup" should rexamine their position. I mean, it's not often one gets this kind of loony entertainment for free.

On Wednesday, you were looking for one. Tonight, you're recommending
it highly. Did you get one? Have you actually USED it?

A 39 inch, no GP antenna is as worthless as a thru-glass cellular look-alike at 27 MHz.

Report your findings on this antenna to us after you waste your money.
We'd all like a laugh...

'pile...an 'ol boy hammie was funnin' (?) around and jamming a repeater
on 146.790 mhz,,,,,Feds told him he must "take immediate action" to make
certain the database (which is public knowledge) contain his address
where he reside, and not merely a contact address as he provided. Some
hammies are sticklers for the rules. Some go to harassment levels, as
seen by several hammie-lids and self-professed "AKCers" who come here to
harass cbers

>Not CBers, Twist: Illegal operators.

You lie. You and your ilk have accused cbers and hammies alike of being
illegal or catering to illegals merely because of their topics. You most
certainly have expressed your venom, and indeed, harassed legal, law
abiding operators for their topic of choice. You most indeed hae
attacked and harassed those for responding to a post you feel should be
censored, merely because the content may offer informational
instructions that when actually employed may break the law pertaining to
cb or amps. Since you can not handle such adult topics with proper
communicative technique, you should ignore that of which offends you
instead of attacking the character of one who asks a question about a
linear.

>Blah, blah, blah. Same old Twistedhed

>diatribe.

And it's all true,,every word of it, Frankie. It's how you are viewed.

>Only in your twisted little mind, Twisty.

No Frankie-lite,,in all the minds of everyone present that you have
needlessly attacked.
Denial isn't a river in the Nile, old boy.

This,,,is your life, Frankie-lite....

>Hmmm... I thought you were going to quote

>my post where I say that it is my "MORAL duty
>and obligation to needlessly harass cbers".

Illustrating how weak you are in thought.

>Well?

Well what? I said "may", It's there,..oh, what the hell....since you;re drunk as a sailor, here ya' go, Frankie-lite...you wrote:

>It is my legal right, moral responsibility, and

>independant choice to enforce any law I see fit
>to enforce.

Add to that, Frankie-lite,,your admitted lying against all you equate and ignorantly misconstrue as illegal, coupled with your admitted trolling (read: harassment) and your claim about having a moral obligation is right there with the rest of your lies and denials. Don't ya' love when a plan comes together, Frankie-lite? Especially when the architect is made to be the first to walk in the house he costructed when under the influence.....

even so twisty but there resides on this ng those who claim to be non amateurs who will continue to remind those newbies which side of the law to stay on. never ending cycle...

_
No doubt,,only the lids in question have taken a very pro-active agressive campaign against otherwise passive cbers in this group for no reason other than personal contempt. This is merely but a way for sandbaggers (and there are puh-lenty) or any of those who may have been harassed or wronged by one of these lids...to return the favor by doing the right thing and following the "proper" channels. The lids are so concerned about the law, let 'em start obeying it and they can lead by example. Those who have done no wrong and are in compliance, have nothing to fear...<g>..after all,, that is what we are always told by those that are more than likely in violation. Who wants to guess who is next to make the rainreport from Rec.Radio.Cb?

_
>hopefully no one.

Pshaw! If these hammies that refer to themselves as the "AKC" break the law, they deserve everything they get,,just likethey claim the cbers deserve....this is where I again agree with JerryO. What's good for the goose...

>being cynical, in 20-30 years time i see the cb

>hobby done in by corporate noodniks wanting

>ever decreasing bandwidth for commercial

>reasons.

I see it almost dead by that time, too, but for other reasons. Technology is rendering the medium obscure and less young folks are interested.

>how much political pull does the average cber

>have? 0 arrl at least tries to protect its

>allocations. is cb doomed? yup

>freeband to piss people off....

Freeband to piss people off? Why in the world should freebanding piss people off, especially when it doesn;t bother them otr have anything to

do with them whatsoever? I know it pisses off a certain element (usually nocodes, as they have no HF access) but they need to upgrade instead of flaring their jealousy at cbers and freebanders. Frank and Lelnad and N8 and WA3MOJ and Davie (the Hypocrite Hall all claim that freebanding affects legal services, yet we have a hammie, a Mr. Eric Oyen, who resides in one of the most lawless cities in the nation for cb, hammie, and freeband radio, and he claims the freeband isn't a problem with interference to legal bands, the ten meter band in particular. Given the posts of all mentioned, I am inclined to believe Mr. Oyen in this instant.

if you
suspect they are breaking the rules or residing somewhere other than the address they provide the FCC. The FCC will do the rest.

>The problem here is that these hams who are

>obcessed with illegal CB are probably not

>breaking any of the FCC rules,

Two names come to mind instantly,,,N8wwm and Davie Hall,,N8wwm was mentioned by the FCC Rainreport for hammie violations. Davie Hall railed and screamed for years against
freebanders until a hammie fed up with his hypocrisy showed me where he was a self-professed "keyclown" for years. His excuse was something along the lines of "Well, I learned alot since then and grew up and learned to operate legally." Which is fine, as it is a natural stepping-stone for freebanders and illegals, as Davie proved., The problem with his methodology, is he cries about anyone else taking the approach he did,,in other words,,it was quite alright for him to break the law and learn over the years, but it is not permitted for others to arrive in the same manner and path that he chose...he begrudges those that came after him, effectively looking down, harassing, and calling names to operators for doing what he did himself. His anger got the best of him again, another posting provider was pulled, and that is why he appears to be "quiet". He is eating humble pie, while watching the rest of the AKC group digest their crow.

>I belive some of them would turn their own

>mother in if she went over 4 watts. You'll have

>to catch them breaking some other law,

>maybe if see one of these guys hanging

>around the truck stop with his camera looking

>for Galaxy radios, call a cop and accuse him

>of being stalker or pervert or lot-lizard.

Nahh,,here's my theory,,,,,,these few lids that are ate up over identity (AKC) and strain themselves over mundane things are more than likely providing false addys to the feds,,,a violation. Heck, just send the call signs of the boys that the voob man named as his assistants (I can re-post his claim, if needed) to FCCHAM@FCC.GOV and tell them you

suspect they are intentionally providing false information.... add a couple of their more "colorful" posts in with the complaint, and watch the fire rain down,,,that is exactly what happened with N8. When word was out he was popped, Hollingsworth personally received a plethora of posts from our favorite nocode outlaw, juts to illustate the type person he was dealing with. Thing is, when some of these lids.get popped, their posts, in all their glory, show how they preach obeying the law...it can come in pretty handy for the prosecution, should they have to show cause that these problematic hammies knew better and knew the law, even if it is something as trivial as the provided address.....so, here we have yet another example of select hammies who routinely select which laws they choose to obey, while crying to cbers about their alleged lawbreaking..mind you, this fits only a minute fraction of hammies present, and we all know who they are,,, check the Voob man's post! It's the one solid contribution he made to this group.

>Will this love/hate relationship never end?

_
You'd have to ask the one who initiates the conversation on a daily basis. Don't hold you breath,,I'm the most interesting thing in his life these days....when is the last time you remember Frankie-lite waiting by his pc all day, breathlessly awaiting a reply..I haven't seen him this ate up with himself since his ego was handed to him on a platter by Eitner when he showed Frankie-lite knows little concerning real-world applications in the radio world.
Frankie- has been posting, early morning, noon, and drunken nights. I twisted his arm, you see, and forced him to make multiple replies to many of my single posts. It's pretty simple actually, I don't dislike or like the man, as I do not know him. The like/dislike/hate/love and entire emotional concept has nothing to do with cb topics..except for those whose egos are too heavily involved. The mistaken belief held by the lower class of humans, that one may "know" another through usenet and then only by what said person permits, is not only ignorance in its finest form, but the gist of Frankie-lites problems he tries to lay off on others......

No, Frankie,,,you maintain that I am intelligent. In fact, you go out of
your way to maintain that each day.

>So am I wrong?

Often. If you're way off topic again and need schooling on the language
you butcher, or if you wish to persue off topics pertinent to my
personal world, I suggest you take your never-ending quests for personal
information to email, not that it would necessarily will gain you
anything. In fact, you have everything to lose and nothing to gain by
doing so, Frankie-lite.

>-- is that the truth or just another one of your
'
>beliefs'? If it's the truth, prove it and learn

>something about newsgroup quoting.

Once again, a problem only you illustrate.

_
,hey, check it
out,,...here's a deep thought, check the google archives.."N8WWM",
"FCC", "Violations" "Jamming" and "repeater" ought to do it. Since you
are inquiring so much about the misdeeds and miscontributions of N8wwm,
I suggetyou contact

>LOL.....that's "s-u-g-g-e-s-t

>y-o-u"......Hahahhahaahahhahah!

Glad my typos elicit such varied responses, although I could suggest
other ways to entertain yourself.

>I could have said the same thing, Twist.

But you didn't. You initiated whining over typos and correct grammar,
sharing your blessed ignorance even further.

>Instead, I decided to demonstrate just how

>stupid you look when you gloat every time I

>misspell a word.

Big difference between typos, such as missing letter typos in my posts (due to my stealth speed) and your repeated incompetent spelling. Again, you initiated the practice, yet here you sit and hypocritically cry like a baby when the behavior is returned to its point of origin. The golden rule, Frankie-lite,,the golden-rule....

_
I believe Frank was in the county jail when it happened.

>Earlier in the post you said, "Again, you were

>probably i the county jail when he was

>popped". Do you usually read posts from the

>bottom to the top?

Only when you snip.

>But I didn't snip.

But you did. Snipping was initiated by yourself, and as is all your malicious behavior, when it is returned to it's proper place of origin, you cry,,,right on cue.

>Semantics is Twisty's way of trying to make

?his 'beliefs' sound credible.

LOL...how can a belief be anymore than just that..

>LOL.....that's "a-n-y

>m-o-r-e"......Hahahhahaahahhahah! (anymore

>-- 1. any longer 2. at the present time)

No doubt. When you are reduced to taking issues with my typos and grammatical use, one must really hate to look at themself in the mirror at the end of the day.

>Speak for yourself, "b-u-f-f-o-o-n".

Touche! LOL...(snip snip),,hahaha!
Boy, your
head sure is twisted,,LOL.

>But he doesn't real

The only thing I dont realize, along with the
majority of cbers resent, is you

>LOL..

>.that's"p-r-e-s-e-n-t"......Hahahhahaahahhahah
>!

LOL..you knew what it was,,,hahahhahah!
Again, it is a pleasure to watch you frolic.

>And again, it's a pleasure to see you discredit

>your own post!

Merely but another of a long line of problems you share with the group,,,,communication deficits responsible for your name calling, anger, malice, misdirected anger, all contribute to your misinterpretations.

_
is you,,LOL...and you're ego

>LOL.....that's

>"y-o-u-r"......Hahahhahaahahhahah!

Sure is,,but I don;t bother with it when entertaining myself,,,and I don't watch the keyboad and poke with an index finger as you, do Fankie-lite..

>Oh really? Then who was it that wrote this:

>LOL..

(...that's
"b-u-f-f-o-o-n"......Hahahhahaahahhahah!)

I wrote it,,why? It was in response to the swamp angel that attempted to use the word as an insult, yet failed to spell it properly. It would illustrate such if you didn't snip it and remove it from it's original context..oh wait,,you claimed you didn't snip..LOL.

>Ain't it fun when the door slams back in your

>face?

Especially when you're the recipient time after time and aren't even aware of it. I keep telling you you;re so far out of the loop, but you are hell-bent on searching for aliens and worried about me blasting your receive you can do nothing else but dream of me in your waking hours,,and I muts be invading your dreams, as well.

_
.,matter of fact, twas yourself that asked me tone down my writing and choice of vernacular a few years ago, as it was confusing you. You took issue with the word "ascertain",,it's all in there, Frankie,,you're like a spoiled child,,your needs were tailored to by myself (whoops,,typo) in the grandest gesture of good-will, now you cry

_
>The crying you hear isn't coming from me! You
>wanted to make an issue out of spelling, I

>simply accomodated. LOL!

Umm...there is 2 "m"s in the word you mis-spelled <g>.
Anyhow, not true. I never wanted to make an issue out of spelling,,it was YOU that wanted to make an issue out of words, their usage, the grammar, etc.....I merely threw it back at you with your incompetent spelling examples, as it was you that put them out there,,I just pointed them out AFTER you took issue with my posts.,,and here you are crying about, once again, what was iinitiated by yourself.

–
you want it back the way it was,,,now, come on over here, sit down, shake the vermin from your coat and the lice from your hair and inform us once again how you arrived at such illustrious gaffes concerning the translation of dead Latin rules to English. To what school, teacher or class in specific, can you cite that mistaught you such blasphemous incompetence and butchering of the English language?

>You mean when I educated you (a

>self-proclaimed

Tut--tut,,you must feel like you are "losing" your imagined and waged battle you so often speak of...such terms as"winning" and "losing" illustrate your dire need for acceptance. You always enter a lie when cornered. There was no "self-proclamation" on my behalf, as you certainly know. No, Frankie-lite, you inquired as to my profession,,,that nullifies your lie, and you;re ate up with it, once again. No need to lie, Frankie-lite,,self-degredation is a trait only you find enjoyable,,oh, and Lelnad with his "self-professed" pleasure and release he arrives at through "messing" with cbers.

>"professional journalist") on the proper use of

>prepositions?

LOL..you were taught once, and provided the proper documentation concerning the error you made. The error you made is very prevalent among high school composition students and those who may have taken Latin. Unfortunately, you should have taken English, or (hyuk) "Communications".
  That one can live to be as old as you and steadfastly be determined to remain ignorant
merely because of their inability of self-control and personal feelings is a pretty pathetic
life to lead.

>If you don't have a decent grammatical

>reference on your desk, I would be more than

>happy to send you one at no cost whatsoever!
Go ahead. Lelnad claims he has the address.

>I'll even include a recent Webster's so you can
>look up the definition of all those ten-dollar

>words you have used but didn't understand.

You are really pissed off again, musta lost something in addition to self-respect...your anger insists it. Go ahead and post the addy, Frankie-lite. Perhaps Lelnad can assist you, after all, it was his claim.

_
is so heavily involved that you are like a rabid animal, out of control, lashing and snarling in all directions because no one will pull out the splinter I jammed in your paw..LOL.

>that he looks like a

>baffoon

LOL.....that's "b-u-f-f-o-o-n"......Hahahhahaahahhahah!

>when he ridicules others

I ridicule no one that has initiated no hate.

>LOL.....that's a

>double-negative......Hahahhahaahahhahah!

You're the double-negative.

>No, YOU'RE the double-negative!

>Oh yeah? Well YOU'RE the double-negative

>times TWO!

>But YOU'RE the double-negative times

>INFINITY!

>Oh yeah? Your mommy wears combat boots!

>...oh brother.

>for not catching his carefully worded

>escape-routes,

Once again, 'ol twist demonstrates the devastating effect he has on your twisted psyche. Booze doesn't agree with you, you are much to angry and have way to many inner demons. One should learn to like themselves, then ultimately love themself,....your self-hatred really rises to the surface when you're angry. That man in your mirror at the end of the day really doesn't like what he sees.

_
>And you have done a wonderful job this time,

>Twist.
.
>....Hahahhahaahahhahah!

Thank you,,in fact,,so have you....outstanding, actually. I don't mind ascertaining you do your daily job illustrating my intelligence.

>My pleasure, but it's a shame you don't use it.

You're out of the loop. You're like a poor little boy with no money on a hot summer day with his nose pressed up against the ice cream sandwich store, salivating so badly for what you can never attain.......

Balderdash. Not only that,,but ludicrous. One can get information on how
to make bombs, poisons, drugs, etc. from the internet. Does the internet
become your accomplice?

_
>Hey Twisty, don't you realize that you are

>chastising your cheerleader?

Another magnificent display of your communication deficit. Your personal
feelings rule over any common sense,,it's not about the person,
Frankie-lite, as much as you want it to be,,it;s about the content, but
from your displays of incongruous behavior and hypocritical actions, you
will never be able to learn that,,,after all, its effective
communication, something you prove eludes your grasp on a daily basis .
Someday you may learn how to separate your anger from your posts and
learn to concentrate on the content and not the person whom you know
from a can of paint but maintain otherwise..LOL

>After all these years in the newsgroups, and

>all these people telling you that your quoting is
>screwed up, and you STILL can't get it right?

>Dumbass.

Awww,,,you're anger and reputation precedes you, Frankie-lite...LOL!

_
Books on how to change ones ID, disappear, monkey-wrench, make
moonshine, etc., etc., have all been readily available since most can
remember. An inanimate object can have no input on one's actions,
period.

>They most certainly can,

No, they can't.

>especially when said

>inanimate object is controlled

Therein is your problem ,as always, junior,,,"control", or as in your specific case, lack of. A book is not controlled, Frankie-lite, not in the United States. your commie flap won't fly here,,,,try Iraq or a terrorist nation where such information is suppressed by men not unlike yourself who feel such information is responsible for controlling anothers actions. Putz.

>or directed by a

>person with intentions that are less than

>honorable, anti-social, or just plain malicious.
 Blaming the content is the same as blaming the topic, or another person, abdicating all personal responsibility.

>So it was JFK's fault that he put himself in the

>path of a bullet, right?

Egad, but you were soused when you wrote this, little man.

(In particular, I'm looking at the plans for his CP beam antenna and the Digital Speech
Processor kit. I have the skills required to
construct either, but not the knowledge to
know if either project is worth the effort.)

--
Any project one does to the best of their ability is worth the effort. Don't ever lose sight of that and don't ever allow another to tell you different.

-
>Research and investigation is effort that is well
>spent, and that is exactly what he was doing.

>Do you know how bats got around in caves

_
As far as power handling capacity,,,they are. Finding a linear in and
around Jersey....

>Hmmm.... where did he say he is in Jersey,

>Twist?

He didn't. Try to stay relevant.

_
>If he didn't say he was in Jersey,

IF wishes were horses beggars would ride.

>then why did

>YOU say Jersey,

Because it's relevant.

>and how is Jersey relevant?

You're out of the loop, Frankie-lite.

>Yes, I learned it's a good thing to stand back

You never stood back, Frankie-lite,,you have always demonstrated a
fondness for rushing in where angels fear to tread and doing a
half-gainer into a swan dive head first into a vat of fecal matter.

>Probably because it used to be a swimming

>pool until you came along and filled it with

>"fecal matter".

Odd (not really).....you are the one defending N8's illegal actions and he is the one that spam filled this group with hate and perverted filth, while Lelnad KC8LDO told the group that just to prove a point, he could contact N8 and have him restart his campign of hate and flooding. So in effect, we have N8 that brought his love of cb to the group, Lelnad attempting to blackmail the group (several times) and you defending the both of them. You need to see that post, too, Frankie-lite?
LOL,,anyways,,good morning,,,somehow, I juts knew you wold be waiting here 'round the clock for me,..after all, it;s not about cb anymore with you,,,its about ME....LOL.

_
Attempts to pull you out have resulted in you pulling others down to your level.

>whenever you start forming loops by chasing

>your own tail (tracer-routing people's IP

>numbers), because it usually means that you

>are about to do something extraordinarily

>stupid.

LOL..geee,that wasn't efective,,,curse me, call me a name or something,,you're slipping.

>That's because you have filled the vat so far

>it's overflowing.

You're the one complaining. You're the one with the problems. You're the one attempting to abdicate personal responsibility by blaming others for your misery.

>So did you trace it far enough to see that the

>block holding his IP is subbed out from AT&T

>to MCC in Middletown, NY? You must be

>REALLY paranoid to trace the headers of

>people that agree with you.
==========
LOL,,I didn't trace anything. You're out of the loop. Jersey is THE place to get linears these days.

>Oh really? I thought

Another problem.

>the place to get linears

>and other illegal CB equipment was through

>yahoo auctions.

Why mess with an auction when one can go straight to a source? I suppose if one wishes to pay more,,this would illustrate why you "thought" the way you did.

>So where do you get your information that

>Jersey is the place for amps?

You're out of the loop, Frankie-lite,,and you're not about to be brought in, no matter how nicely you ask.

_
It needs repeated: Never have I met
anyone so determined to remain ignorant, such as yourself. Do try to not allow your personal feelings to cloud your posts, Frankie-lite,,,

>Don't worry, I won't.

Beginning when?

> Now who, other than yourself, is saying that

>"Jersey is THE place to get linears these

>days"?

Gee, Frankie-lite,,,,your communication deficit is really reeking havoc on your psyche.

Oh yeah, the self-proclaimed "CB amp god". Where is he these days? Is he hiding
out in some other forum espousing the benefits of self-biased Class C 'linears'
with "swang"?

> Frankie- has been posting, early morning, noon, and drunken nights.

It's called a "vacation", and I have one more week before I start day-shift at
the station (I was working nights -- that is, if 'work' can be defined as
spending an hour doing the daily checks and paperwork then sitting around
waiting for something to break). But the good thing is that we hired a thrid BE
so I'm no longer on-call 24-hrs/day and I get the weekends off. But you wouldn't
know anything about that since you are still on work-release....

It is. Now where do I say that it is my "MORAL duty and obligation to needlessly harass cbers"? Which begs another question: If I'm harassing CBers, and I happen to be a CBer myself, then I must be harassing myself; isn't that a conflict of interest, Trog?

>Add to that, Frankie-lite,,your admitted lying against all you equate
>and ignorantly misconstrue as illegal,

Freebanding isn't illegal? Using an amp with a CB isn't illegal? What country do YOU live in, Trog? Cuba?

> coupled with your admitted
>trolling (read: harassment)

I have said all along that if you feel you are being illegally harassed then by all means seek whatever legal remedies you think are necessary. Nobody has done so yet, which means either that my "harassment" isn't illegal, or that nobody thinks that legal remedies are necessary; in either case, the only person whining about harassment is you, and that's ALL you are doing, Trog.

> and your claim about having a moral

749. Newbie question about power supplies

Newsgroup: rec.radio.cb
Date: 2003-07-11 14:48:06 UTC
From: faz@prontomail.com
Message-ID: <2acd41a7.0307110648.517638b1@posting.google.com>
Source record: 162281

I have just purchased a Midland 77-095 CB & have a 13.8V 5A power supply, is the power supply suitable for the CB? In the book that came with the CB it identifies that the power supply should be 13.8V but give not indication to the current.

Any comments would be greatly appreciated as I have tried google to no avail.

Thanks

I never said anything to the contrary. The problem, Trog, is your communcation
deficit. Read what I said again, but slowly this time, and noting the emphasized
words:

"Pay him money and HE will help YOU to violate federal regulations!"

Now where did I say that "HE" (Lou Franklin) is breaking any law? I said that he
can help "YOU" (the aspiring keyclown) to break the law.

Learn how to read, Trog.

Well, because you can't quote properly your reply is an absolute mess. But since
you whine all the time about snipping, I'll just leave it intact and only reply
to the parts that I can recognize are new:

In <27347-3F0EC199-89@storefull-2311.public.lawson.webtv.net>,
twistedhed@webtv.net (Trog) wrote:

'pile...an 'ol boy hammie was funnin' (?) around and jamming a repeater
on 146.790 mhz,,,,,Feds told him he must "take immediate action" to make
certain the database (which is public knowledge) contain his address
where he reside, and not merely a contact address as he provided. Some
hammies are sticklers for the rules. Some go to harassment levels, as
seen by several hammie-lids and self-professed "AKCers" who come here to
harass cbers

>Not CBers, Twist: Illegal operators.

You lie. You and your ilk have accused cbers and hammies alike of being
illegal or catering to illegals merely because of their topics. You most
certainly have expressed your venom, and indeed, harassed legal, law
abiding operators for their topic of choice. You most indeed hae
attacked and harassed those for responding to a post you feel should be
censored, merely because the content may offer informational
instructions that when actually employed may break the law pertaining to
cb or amps. Since you can not handle such adult topics with proper
communicative technique, you should ignore that of which offends you
instead of attacking the character of one who asks a question about a
linear.

>Blah, blah, blah. Same old Twistedhed

>diatribe.

And it's all true,,every word of it, Frankie. It's how you are viewed.

>Only in your twisted little mind, Twisty.

No Frankie-lite,,in the minds of all present that you have needlessly
attacked.
Denial isn't a river in the Nile, old boy.
This,,,is your life, Frankie-lite....

>Hmmm... I thought you were going to quote

>my post where I say that it is my "MORAL duty
>and obligation to needlessly harass cbers".

That's one way of attempting to get the light off your past harassment of those who speak of topics that dicombobulate you, such as amps and mods.

_
Illustrating how weak you are in thought.

>Well?

Well what? I said "may", It's there,..oh, what the hell....since you;re drunk as a sailor, here ya' go, Frankie-lite...you wrote:

>It is my legal right, moral responsibility, and

>independant choice to enforce any law I see fit
>to enforce.

>It is. Now where do I say that it is my "MORAL
>duty

"Duty" and "responsibility" can, and often do, share the same definition. Run, run, run, Frankie lite, run like the wind to your semantic focuses...you are being forced to face your own behavior, so run, Frankie-lite, run to the land of enchanted semantics.

> and obligation to needlessly harass cbers"?

You claim it is your right to enforce any law "you" see fit. Wrong. You are not a law enforcement officer and the law strongly discourages vigilantism.
You claim it is your "moral" responsibility. Imposing your interpretation of morality constitutes the harassment of those that do not share your views,,you can define "harassment' in any manner you choose,,for your examples, I point to the countless attacks you have made, unprovoked, the countless names you have called people, unprovoked, the continual badgering of those who hold you and your views impotent, and the misdirected anger and personal attacks of those who ask a question of a linear or mod. You are not the moderator and it kills you that you can not censor such speech. You have illustrated your frustration level many times, once by placing a call-to-arms for a "legal" cb only discussion group. Not only did you receive no takers, you were laughed away.
Receiving no takers, and failing at censoring and intimidating those that speak of subjects that render you a quivering mass of jello, you resort to what you are about and that of wich you know best,,,,,the above mentioned behavior and what can most certainly be construed as.......harassing behavior...IE: harassment. Note all your posts are directed at others, most recently myself, but rarely does anyone give you the time of day unless you act out,,,its what childen do when they wish to receieve attention but do not understand how to go about

it,,,,they react negatively. Yet another beaming illustration of the
communication deficit that ails you and keeps you down.
,,,,,,

>Which begs another question: If I'm harassing

>CBers, and I happen to be a CBer myself,

>then I must be harassing myself;

Nah. The term for what you do to yourself is "self-masochism".

>isn't that a conflict of interest, Trog?

LOL,,I'll be anyone you want me to be, Frankie-lite, if it pleases you.
I told you that once before,,try to retain it this time.

_
Add to that, Frankie-lite,,your admitted lying against all you equate
and ignorantly misconstrue as illegal,

>Freebanding isn't illegal?

>Using an amp with a CB isn't illegal? What

>country do YOU live in, Trog? Cuba?

Banality.
This is not all you misconstrued as illegal. Most recently, you accused
legal books of aiding criminality. We are not speaking of illegal radio
activity, Frankie-lite, but speech. Many times you have failed at making
an argument of why certain speech does not belong in this group.Your
deficit is cornfusing you bewtween speech and actions. If it was actions
you truly were concerned with, you would take proactive measures instead
of reactive measures. But you ascertained quite nicely your
self-contradiction,,,you recently claimed you didn't care about illegal
cb, but you were forced to regurgitate to the point of recognition.

_
 coupled with your admitted
trolling (read: harassment)

>I have said all along that if you feel you are

>being illegally harassed then by all means

Tut-tut, Frankie-lite..I accused you of no illegal harassment. That's
the second time today you reduced yourself and resorted to lying in a
failed effortat placing words in my mouth..poor kid.

_
>seek whatever legal remedies you think are

>necessary. Nobody has done so yet, which

>means either that my "harassment" isn't illegal,
>or that nobody thinks that legal remedies are

>necessary;

LOL..same with my activities you deem illegal, such as freebanding.

–

> in either case, the only person whining about

>harassment is you, and that's ALL you are

>doing, Trog.

That your communication deficit renders you incompetent to the point of misinterpreting a reply to your initiated inquiry (coupled with your failure to recognize or comprehend such) as "whining" astutely solidifies the image in which you have created for yourself. One who suffers a great, big, fat communication deficit.

–
   and your claim about having a moral
obligation is right there with the rest of your lies and denials. Don't ya' love when a plan comes together, Frankie-lite? Especially when the architect is made to be the first to walk in the house he costructed when under the influence.....

>I'm still waiting for you to quote my post where
>I say that it is my "MORAL duty and obligation

>to needlessly harass cbers".

>Well?

See above, Frankie-lite. Oh, ,,and below.

>you,,,its about ME....LOL.

For starters, I don't defend Doug's or Leland's actions, legal or not. They can defend themselves if they so choose. Secondly, there was indeed a lot of spam that filled this group with hate and perverted filth, and you had your slimy hand in part of it yourself. Thirdly, it was YOU that wanted me to join your little love-fest with Leland and Doug with your insinuations and allegations (oh, that's right, those were your "beliefs") that I was one (or both) of them, and/or part of an anti-Twistedhed consipracy that exist(ed) in your paranoid delusions. And finally, you continue to fan the flames by convincing yourself that your hallucinations were real, maintaining them even now as you continue to accuse me of being N7VCF (or Leland, or whoever it is you "believe" me to be this week other than who I am). If your beleaguered existence can only survive by fighting with enemies that you created yourself, then by all means continue. But once in a while take a stroll out in the mushroom patch (don't forget to wear your bullet-proof vest in case there are more people like you in the area), munch a big 'ol toad stool and dream up some new enemies, because your game is getting real old and stale, Trog.

>place to get linears these days.
>
>>Oh really? I thought
>
>
>
>Another problem.

Sometimes I wonder if you think you are being clever with your 'hack-and-attack'
method of posting. But you know what would be even -more- clever? If you could
learn how to quote. Now THAT might impress somebody!

>>the place to get linears
>
>>and other illegal CB equipment was through
>
>>yahoo auctions.
>
>
>

>Why mess with an auction when one can go straight to a source? I suppose
>if one wishes to pay more,,this would illustrate why you "thought" the
>way you did.

Prices on auctions are usually less than the original price, which makes good
sense especially if the equipment is still being manufactured.

>>So where do you get your information that
>
>>Jersey is the place for amps?
>
>
>
>
>You're out of the loop, Frankie-lite,,and you're not about to be brought
>in, no matter how nicely you ask.

Uh huh. Just as I thought, you can't answer the question.

>_
>It needs repeated: Never have I met
>anyone so determined to remain ignorant, such as yourself. Do try to not
>allow your personal feelings to cloud your posts, Frankie-lite,,,
>

A power supply of 3 amps is adequate, 5 amps is fine, and unless you plan on using some power accessories you shouldn't need anything larger.

WRC-03: GOOD NEWS FOR HAM RADIO - BAD NEWS FOR SUPPORTERS OF CW

The 2003 World Radiocommunications Conference in Geneva is over and there is some generally good news for ham radio. Q-News Graham Kemp, VK4BB, has been following this story and has a complete wrap up on the way that amateur radio fared:

--

The 2003 World Radiocommunication Conference concluded its discussions of the issues on its agenda on Thursday afternoon, 3 July, after marathon Plenary sessions that tested the patience and stamina of the conferees. The big news for radio amateurs is that there will be a dramatic improvement for we here in region 3 in regard the 40-meter band!

7100-7200 kHz band reallocated to the amateur service in both region 3 and 1, Region 2 7000-7300 kHz remains exclusively amateur. The change will take effect on 29 March 2009, less than six years from now!

Now the "but".. A footnote containing the names of countries that are mainly in Region 3 and the Arab States makes the band also available to the fixed and mobile services in those countries on a primary basis.

It was not easy to achieve such a positive outcome on this issue. A last-ditch effort to bridge differences was chaired by Alan Ashman of Australia.

Perhaps the magnitude of what has been accomplished for radio amateurs can best be explained this way: Never before in the history of radiocommunication has an HF broadcasting band been shifted to accommodate the needs of another service. This is not simply an accomplishment of the IARU. It would not have been possible without the cooperation of a number of broadcasters and many, many others. The people who worked with us who are not radio amateurs -- including some who were strongly opposed at the start but who acceded to the compromise --deserve much of the credit. For example, Australia came to the conference

with a strong "no change" position and had to shift its position dramatically in order to embrace the compromise.

Agenda item 1.7.1 (Article 25): A package of revisions to the international Radio Regulations that are specific to the amateur and amateur-satellite services, takes effect on Saturday, 5 July 2003. Michael Owen, VK3KI, has guided the work of IARU on this issue since 1996.

Agenda item 1.7.2 (Article 19): 432-438 MHz secondary allocation for satellite-borne synthetic aperture radars was approved in Plenary.

Agenda item 1.1 (footnotes): "Footnote fever" seized some administrations in the closing hours of the conference. Fortunately, the amateur service escaped serious damage from "footnote fever" although it may be a problem in the future if countries want to climb into the footnote for fixed and mobile at 7100-7200 kHz.

As Secretary David, K1ZZ said in wrapping up his report... "It's Over! Well, the work is over; the ceremonial closing of the Conference will occur on Friday afternoon, 4 July. Then we will
all be heading home, except for those who are staying for a two- day meeting to plan the preparatory work for WRC-07.

Yes, it's all beginning again...."

From Q-News Australia, I’m Graham Kemp, VK4BB, reporting for the Amateur Radio Newsline.
--

There are two very important documents that came out of WRC 03 that every radio amateur should read. Both were issued at the close of the conference by the International Amateur Radio Union. The first is a final wrap up on the conference by Dave Sumner, K1ZZ. The other is an in-depth explanation of the changes to the worlds radio regulations authored by Michael Owen, VK3KI. You will find links to both of them on the front page of out website at www.arnewsline.org (Q-News, IARU, ARRL, WIA, others)

**

60 METERS: A LOOK AT NIGHT ONE ON THE NEW GENTLEMENS BAND

Its being called the “New Gentlemans Band” by some. At least thats what monitoring the first availability of the new 60 meter band as it opened to the East Coast on July 3rd. Newsline’s Don Wilbanks, was listening in from the deep South:

--
The ‘New Gentlemens Band” may well be a title that will stick on 60 meters. Even as the new frequencies came to life, there was none of the on-air pushing and shoving thats so prevelant on other bands like 20 and 40 meters. Instead, those observing, operating and posting thir thoughts to the Internet seemed to agree that calm and order was the way most approached 60 meter operation.

Ron Wray, WB5HZ, was one of those listening in. He says over the qrz.com website that it seemed as if someone had kicked an anthill at 11:00 PM Central time. That’s when hundreds of stations were conducting simultaneous QSO’s on all five frequencies.

According to Wray, there were explosions of activity that continued throughout the night as each time zone jumped onto the new band in sequence. And Wray notes the apparent success of the 50 watt effective radiated power limit. He says that from his location in Dear Park Texas, the low power limit made it so that no one signal was sufficiently strong to completely control any particular frequency. And because of this amateurs were able to make solid contacts despite the unbelievable level of QRM.

Robert Harper, AFZ0H, of Park Hills Missouri was another early user of 60 meters. In his posting to QRZ, Harper said that he was very impressed by the discipline of the amateur community on opening night. Despite the noise and the crowd, everyone seemed to keep a level head. He says that it was an atmosphere that reminded him of the "good ol' days," adding that he cannot recall when he last observed such gentlemanly behavior under such crowded conditions.

And Bill Collins K8NQC, may have summed it up best. In his QRZ note he said that multiple QSO's on the same frequency will greatly help the utility of the band. He adds that the absence of big signals is really a plus.

For the Amateur Radio Newsline, I’m Don Wilbanks, AE5DW, in New Orleans,

--

So far there seem to be no complaints about the new spot frequencies that comprise the current 60 meter ham radio allocation. In fact, one ham was heard to say that the rest of high frequency Amateur Radio can learn lessons in sportsmanship and courtesy by simply tuning in. (ARNewsline(tm), from QRZ.com and other sources)

**

RADIO RULES: ANTI-ENHANCED SSB PETITION ASSIGNED RM 10740

Its taken some time, but the FCC has now assigned the designation RM 10740 to the petition by Michael Lonneke, W0YR, of Round Hill, Virginia, and Melvin Ladisky, W6FDR, of Camarillo, California to limit the bandwidth of Single Sideband an full carrier ampletude modulated signals on all ham bands below 28 MHz. As previously reported, W0YR and W6FDR want SSB signals to be limited to 2.8 Kilohertz and AM to be no wider than 5.6 kilohertz.

The petitioners make no secret that their regulastory request is aimed squarely at those hams who are experimenting with enhanced SSB signals which are wider than the 2.8 kilohertz that they believe should be the maximum bandwidth. They claim that enhanced SSB is bothersome to other operations and that some users of the pseudo mode are unwilling to cooperate in minimizing harm being caused.

What Lonneke and Ladisky have not bothered to explain is why they also targeted users of AM whom even they they freely admit are not causing a problem for other radio amateurs.

Either way, RM 10740 carries a commentary cutoff date of August 2nd. You can let the agency know how you feel by submitting commentary by mail or using the FCC's Electronic Comment Filing System. It'sated in cyberspace at www.fcc.gov. Once there use the websites search function to locate RM 10740. (ARNewsline(tm))

YHOTY 2003: JAY THOMPSON, W6JAY, NAMED ARNEWSLINE(tm) YOUNG HAM OF THE YEAR

He is not yet 18, but he is a champion class hidden transmitter hunter as well as a young ham devoted to public service and to bringing more kids into the hobby. And for these reasons and more, a select committee of judges has named Jay Thompson, W6JAY, of Santa Ana California to receive the 2003 Amateur Radio Newsline Young Ham of the Year Award. We have more in this report:

--

If the name Jay Thompson and the call sign W6JAY sound familiar, its because Jay has made news several times in the world of hidden transmitter hunting. In the five years that he has been licensed, W6JAY has participated in three championship hunts has won virtually every type of medal offered in his age group. One hunt took him all the way to China. And when you travel the world, hidden transmitter hunting can leave you with moments to remember:

--

Thompson: "In China it was raining. And in the bamboo forest, when you shook the trees, you would get a mini-shower fall on you and it would just cool you off after you had been running for a while."

--

But his exploits in T-hunting is not the only reason that Jay was chosen as this years Young Ham of the Year. He is also heavily involved in emergency communications and is a member of the Orange County Hospital Disaster Emergency Communications System. This is a medical communications support group that gave W6JAY his first taste of what responding to a real emergency is like:

--

Thompson: "During the Plecencia Linda train crash I was stationed at a hospital with my dad where we helped to allocate information where patients were going. That helped the hospitals a lot from what I heard."

--

If Jay Thompson sounds enthusiastic about his T-hunting and emergency communications work, you have to hear what he has to say about recruiting youngsters into the hobby. Jay believes that the future of ham radio is with the young:

--

Thompson: “I noticed that there were not very many active young Amateur Radio operators, so I have tried to do my part to get more of them in so that Amateur Radio can have a better future. It starts with the kids and as they grow up they realize that it is such a good activity and will get more people to join. If there are not any kids, then there is not very much of a future for Amateur Radio.”

--

A lot of people seem to agree. In fact ARRL Southwestern Division Vice Director Tuck Miller, NZ6T, calls Jay Thompson: “...a magnet for other young hams to become actively involved in the Amateur service.”

The Young Ham of the Year program is co sponsored by the Amateur Radio Newsline, Vertex Standard which manufactures Yaesu brand ham radio gear and C-Q Magazine. Jay Thompson, W6JAY, will receive his award at a presentation on Saturday August 16th at the Huntsville Hamfest in Alabama.

Right now we ask you to join us in congratulating Jay Thompson, W6JAY, as he is named 2003 Young Ham of the Year.

For the Amateur Radio Newsline, I’m Mark Abramowicz, NT3V, reporting.

--

2003 marks the 17th consecutive year that the award has been presented. (ARNewsline(tm))

**

ENFORCEMENT: FCC ACTS IN THREE CASES

The FCC has contacted three hams on various enforcement matters. The agency’s Daryl Duckworth, NN0W, has more:

--
Audio report only. Hear it at www.arnewsline.org
--

According to Duckworth, that’s the FCC’s enforcement actions through the period ending June 28th. (RAIN, FCC)

**

RESCUE RADIO: PERSONAL LOCATOR BEACONS NOW LEGALLY SOLD IN LOWER 48

Hams could have a new emergency communications job in the near future. T-Hunting down people in distress wearing Personal Locator Beacons.

The CGC Communicator reports that retail stores in the continental United States are now being allowed market the pricey beacon transmitters which can be activated when a person is in a dangerous situation. Proponents of Personal Locator Beacons claim that they will assist rescue teams in finding lost persons in emergency situations.

According to CGC, each beacon must be registered with NOAA before alert activations can be relayed via satellite to the Air Force Rescue Coordination Center at Langley Air Force Base in Virginia. Actual beacon alerts are recieved over the SARSAT COSPAS satellite system which is a long term cooperative effort between the United States and Russia.

More information is on line at www.sarsat.noaa.gov (CGC)

**

RESCUE RADIO: THE DEAN OF ARRL SECTION MANAGERS RETIRES

The dean of ARRL Section Managers, New Mexico's Joe Knight, W5PDY, stepped down from his post on July 2nd. Knight cited poor health in his decision to retire from the volunteer position after serving for nearly 27 years. This is a record of volunteer service longer than any other sitting SM.

Assistant Section Manager Bill Weatherford, KM5FT, of Albuquerque, has been named to fill the remainder of Knight's term, which ends on December 31st. In his departure statement Knight said that he plans to try to help Weatherford as much as he can to assume the Sectiin Managers job. He also thanked his constituancy for the wonderful job that they have done and asked that they support KM5FT in the same way as they did him.

Knight had recommended Weatherford's appointment as his successor. KM5FT is an ARRL life member and has served as an Assistant Section Manager for the past two years. (ARRL)

**

ACCIDENTS HAPPEN: OMAHA’S KETV-TV TOWER COLLAPSES

Joe Eisenberg, K0NEB reports that a broadcast tower being converted for digital television has fallen in Omaha Nebraska. According to a story supplied by Joe, KETV's main broadcast antenna fell to the ground Friday July 4th.

Crews had been working to install High Definition TV technology on the tower since May 30. A new antenna was to replace the aging RCA TW-15 skyhook. A station spokesman said that it is not yet clear how much the tower collapse will set back the stations conversion to digital transmission or how long it will take to clear debris and rebuild. Nor is it known what caused the main tower to fall. (K0NEB)

**

RADIO CONFLICT: PENNSYLVANIA TOWN DISCOVERS WATER AND RADIO WAVES DON'T MIX

Officials in Chambersburg, Pennsylvania have asked the FCC to intercede in a dispute between that township and Radio Station WCBG on 1590 kHz. This, s the borough hires a Louisiana attorney to try to force the owners of the radio

station to cease operating long enough for workers to finish a 2-million-gallon water storage tank project in the nearby Chambers-5 Business Park.

Chambersburg's effort to build a new, elevated, 150-foot-high water storage tank on land adjacent to WCBG's towers have stalled because workers complained of receiving RF burns. Complicating the situation are allegations that the storage tank interferes with WCBG's signal, presumably warping its radiation patterns.

WCBG operates 5 kW non-irectional daytime and, 1 kW directional at night. The whole story is on-line at http://tinyurl.com/g1dk (CGC)

**

ARRL: LOOKING FOR MULTIMEDIA PRESENTATIONS AND VIDEOS

The ARRL’s Field and Educational Services is seeking donations of Amateur Radio related presentation programs or slide shows that utilize Microsoft PowerPoint or similar computer-based slide-viewing software. The department is also interested in VHS and digital video programs to add to materials that it offers hams through the ARRL Video Series. For guidelines on whats acceptable contact Mary Lau, N1VH, 225 Main St, Newington, Connecticut 06111 or e-mail herat mlau@arrl.org. (ARRL)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

THE CHANGING OF THE GUARD: 40 METER DX’ER AL HIX, W8AH, - S.K.

On a sad note, the changing of the guard continues with news that an internationally known dx-er has died. And this news hits very close to this anchor desk. As local hams gathered for field day here in Charleston last month, word was received that Albert Hix, W8AH had become a silent key. Al passed away at his home here in Charleston on June 25. He was 85.

W8AH not only loved amateur radio, he loved his country and the freedom she provides. Al was a skilled member of the US Army signal corps, serving during world war 2 when he was appointed radio officer to General George Patton. He also served during the Korean war and returned to Paris to climb the Eiffel tower again for the daily net with the Pentagon.

After his military service, Al returned to Charleston with his wife and worked as an engineer for Union Carbide until his retirement in 1985. He pursued his beloved hobby with a new vengeance, earning his place on the DXCC honor role with 388 countries confirmed. On 40 meters, he holds the top honors with 362

entries. Al made hundreds of friends around the world through amateur radio, many of them he visited with his wife, Connie.

Avid DX'ers knew one side of Al Hix. Many of us knew another side, as WV ARRL section manager Hal Turley, KC8FS, explains…
--

(KC8FS audio)

--
A US Army chaplain presided during Al's funeral and he was laid to rest with military honors. Meanwhile, local hams seemed to man the field day CW station with a special vigor… and without the traditional W8AH at the key at start time.

(KC8FS audio)_

Al is survived by his charming wife, Connie, brother James and by hundreds of ham friends around the world and here at home in the West Virginia hills… where we knew that the only thing bigger than his signal, was the kind heart of W8AH. (ARNewsline(tm))

**

RADIO PUBLICATIONS: CQ RELEASES HAM RADIO MAGAZINE ANTHOLOGIES

Fans of the old Ham Radio magazine, take note: A new series of anthologies, reprinting selected articles from the pages of ham radio, is now available from the folks at CQ Magazine

The first four books in the series were introduced two weeks ago at the 2003 Dayton Hamvention. The topics covered are: "Antennas, 1968 to1972;" "Antennas, 1973 to 1975;"Homebrewing Techniques" and "Troubleshooting Techniques."

Ham radio magazine was published from 1968 to 1990 and is generally acknowledged as the premier amateur radio technical publication of its time. CQ Communications now owns the rights to Ham Radio magazine and decided to release to compilation books based on requests from the Amateur Radio community. They can be ordered on-line at www.cq-amateur-radio.com. (CQ)

**

CONVENTIONS & HAMFESTS: CINCINNATI IN JULY

On the ham radio social circuit word that the sixth annual OH KY IN Hamfest is slated for Saturday July 26th at the Diamond Oaks Caerrer Development Center in Cincinnati Ohio. The event features a giant outdoor flea market, ham radio test sessions, vendor exhibits, door prizes and lots more. Fur further information e-mail Lynn Ernst at wd8jaw@arrl.net (Via press release)

**

CONVENTIONS & HAMFESTS: DENVER COLORADO IN AUGUST

And the Denver Radio Club Hamfest is scheduled for Sunday, August 17th at the Jefferson County Fairgrounds in Golden Colorado. Doors open at 8:30 AM. For more information contact Bryan Steinberg, KCZ0CUA via e-ail to kcØcua@arrl.net, or via the club website at www.qsl.net/w0tx (Via press release)

**

HAM RADIO IN SPACE: ARISS MARKS SUCCESSFUL EURO SPACE CENTER CONTACT

Another big success for Amateur Radio on the International Space Station. This as U-S Astronaut Ed Lu, operating as NA1SS made contact with youngsters on Space Camp at the Euro Space Center in Belgium at 08:25 U-T-C on Monday July 7th. .

The center operated as ON4ESC with bout 150 children gathered in the auditorium. Some of them were Dutch speaking, others spoke only French speaking and 45 were Americans living in Europe.

Ed Lu answered the call from ON4ESC the very second the ISS was in range of the Euro Space Center. He answered 17 questions during the nearly 8 minutes long pass. At its closest approach, the space outpost was 2000 km south of Belgium, over the Pyrenees mountains. AMSAT Vice Chairman Gaston Bertels, ON4WF, was on hand to oversee the operation as well as introducing the young audience to the amateur radio service, amateur radio satellites and the ham radio stations used by astronauts and cosmonauts while operating from space. (ON4WF)

**

DX

In DX, the question is -- did you work them? Of coarse we are talking about DL6LAU, DL8OBQ, OH2BH, OH2NB and OH3BHL who have been Albania in preparation of setting up a training program to enhance amateur radio in that nation. They have also been on the air as ZA1B operating on several new bands and modes including 6 meters and 2 meters. Their operation was scheduled to conclude on July 13th with QSL’s to be handled together with the April and May ZA1B operation by OH2BH. (OH2BH via N4GN)

Bob Cumming, W2BZY, says that he will be active on 50.110 MHz from Costa Rica TI2 through July 27th. This, in an attempt to activate some of the less common grid square in that nation including EJ79. When not on 6 meters, Bob will be looking for contacts on the high frequency bands. QSL as directed on the air. (VHF Reflector)

Also, look for Desertas Island on the air from July 23rd to the 27th. This as the Madeira DX group activates CT9D and CT9M on RTTY from that rare location. The main purpose of this trip is to mount a VHF repeater on the island to enhance F-M coverage across the Madeira Archiplego. The operators will also be active on SSB, CW and RTTY during their stay. Q-S-L to CS3MAD, P.O.Box 4694 - 9000 Funchal -Ilha da Madeira - Portugal. (OPDX)

**

THAT FINAL ITEM: MISSING LILLY FOUND

And finally this week, the story of a ham radio operator and his dog. It happened back in January, but only recently was the story forwarded to us. Here’s Amateur Radio Newsline’s Bruce Tennant, K6PZW with the details.

--
Peter Kringle K-C-9-B-I-W of Superior Wisconsin tells it this way. Back in January Peter came home for lunch to find his dog Lilly missing. She has some how unhooked the standard dog clasp and a locking carabineer.

Peter first walked around the area looking for his dog. He then got in his car and drove their normal walking loop. But he was unable to find Lilly.

At this point he began asking people in the area if they had seen her. He found out that she had been seen in the area a few times and that she had escaped around 10:30am. So Peter called the local dog shelters, leaving a description of Lilly in case some one found her and brought her in.

By this time it was 3 P.M and Peter decided to try something that he had not heard of anyone else every trying before. He turned to ham radio for assistance in finding his mising pup.

Peter picked up his Yaesu VX-5, and called out on the local 146.94Mhz repeater asked if anyone his area could help my look for Lilly. Two amateur radio operators answered his call. This meant that there were now two in cars and K-C-9-B-I-W on foot looking for her. This meant that the searchers were able to cover much more ground in a very organized fashion.

It was just before 4:00 p.m. when one of the hams spotted Lilly and was able to pick her up. He then called out on the repeater to let every know she was safe. A bit later Peter was able to rendezvous and take the wandering Lilly back home. And thats a perfect happy ending to the story and to this weeks newscast as well.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW reporting.

--

Peters Internet positing about the help he received came with an apology. He wants to thank the two hams who helped out, but unfortunately he has forgotten their call signs. He adds that he hopes they will e-mail him so that he can give proper credit where credit is due. And if you want to see what Peter and Lilly look like, look up KC9BIW om the www.qrz.com website. (WA9ICU)

I've not heard of that one, but SDS (Sudden Death Syndrome), which is what I'm
assuming this was, does tend to afflict people who work out a lot.

Paul.

From: sparky@NOSPAMaimcomm.net (Frank Gilliland)
>Well, because you can't quote properly

LOL..always blaming your misery on another.

>your reply is an absolute mess.

You shouldn;t have initated the snipping. Nevertheless, it's all true,,,100% golden unadulterated truth. The telegaraph was your initiated snipping into the threads.

>But since you whine all the time about

>snipping,

I don't "whine" frankie-lite,,in fact, if your deficit allows it, you can ascertain the truth in google.....I mentioned nothing of snipping until you initiated the practice, in which I quickly I returned the behavior, and you cried about it having it done to your posts,,,the golden rule, Frnakie-lite,,why does it elude your life?.

> I'll just leave it intact and only reply to the

>parts that I can recognize are new:

When you learn how to initiate proper communicative technique, try again.

3In <27347-3F0EC199-89@storefull-2311.public.lawson.webtv.net>, twistedhed@webtv.net (Trog) wrote:

>And I didn't write the line to which you are

>referring. Although it is not at all evident in the

>contents of your posts, you maintain that you

>are intelligent

No, Frankie,,,you maintain that I am intelligent. In fact, you go out of your way to maintain that each day.

>So am I wrong?

Often.

>Ok, so you -aren't- intelligent. I can accept

>that.

These self-contradictions are slaying your "war" Frankie-lite. I have a post from you telling me how intelligent I am, but at times say some stupid things. In fact, you don;t know what to accept, because you don't know much about anything, and it eats at you like a cancer. You continue to allow your anger to dictate your off-topic obsessions of ME..LOL.

_
If you're way off topic again and need schooling on the language you butcher, or if you wish to persue off topics pertinent to my personal world, I suggest you take your never-ending quests for personal information to email, not that it would necessarily will gain you anything. In fact, you have everything to lose and nothing to gain by doing so, Frankie-lite.

>-- is that the truth or just another one of your '

>beliefs'? If it's the truth, prove it and learn

>something about newsgroup quoting.

Once again, a problem only you illustrate.

_
,hey, check it
out,,...here's a deep thought, check the google archives.."N8WWM", "FCC", "Violations" "Jamming" and "repeater" ought to do it. Since you are inquiring so much about the misdeeds and miscontributions of N8wwm, I suggetyou contact

>LOL.....that's "s-u-g-g-e-s-t

>y-o-u".....Hahahhahaahahhahah!

Glad my typos elicit such varied responses, although I could suggest other ways to entertain yourself.

>I could have said the same thing, Twist.

But you didn't. You initiated whining over typos and correct grammar, sharing your blessed ignorance even further.

>Instead, I decided to demonstrate just how

>stupid you look when you gloat every time I

>misspell a word.

Big difference between typos, such as missing letter typos in my posts (due to my stealth speed) and your repeated incompetent spelling. Again, you initiated the practice, yet here you sit and hypocritically cry like a baby when the behavior is returned to its point of origin. The golden rule, Frankie-lite,,the golden-rule....

>I -was- following the golden rule, Trog. I did

>unto you as you did unto me. Or do you have

>a different golden rule?

No Frankie,,you wish to ignore that it was you that came gunning for me concerning a Latin rule that you know nothing of....nothing of value, nothing related to cb,,just a personal anger-filled post about something that you proved you knew nothing about,,,much as how Eitner cleaned your clock illustrating real world applications concerning radio. YOU initated the frenzy of focusing on the grammatical content,,,,since you were proving your ignorance in English with an initated attack on myself, I merely helped you along by pointing out your own filthy backyard,,IE: incompetence in the spelling department. What you were "giving back" was yours to begin with, Frankie-lite.

–

I believe Frank was in the county jail when it happened.

>Earlier in the post you said, "Again, you were

>probably i the county jail when he was

>popped". Do you usually read posts from the

>bottom to the top?

Only when you snip.

>But I didn't snip.

But you did. Snipping was initiated by yourself, and as is all your malicious behavior, when it is returned to it's proper place of origin, you cry,,,right on cue.

>I didn't snip the post to which you were

>referring at the time.

LOL..you also said illegal cb doesn't bother you, Frankie-lite,,in fat, you set forward plenty of untruths with extreme prejudice.

>But if you read the posts from bottom to top

>then you can't really tell if it's snipped or not,

>so the point is moot.

–

>Semantics is Twisty's way of trying to make

>his 'beliefs' sound credible.

LOL...how can a belief be anymore than just that..

>LOL.....that's "a-n-y

>m-o-r-e".....Hahahhahaahahhahah! (anymore

>-- 1. any longer 2. at the present time)

No doubt. When you are reduced to taking issues with my typos and grammatical use, one must really hate to look at themself in the mirror at the end of the day.

>Speak for yourself, "b-u-f-f-o-o-n".

Touche! LOL...(snip snip),,hahaha!
Boy, your
head sure is twisted,,LOL.

>But he doesn't realize

The only thing I dont realize, along with the majority of cbers resent, is you,
LOL..

>.that's"p-r-e-s-e-n-t"......Hahahhahaahahhahah
>!

LOL..you knew what it was,,,hahahhahah!
Again, it is a pleasure to watch you frolic.

>And again, it's a pleasure to see you discredit

>your own post!

Merely but another of a long line of problems you share with the group,,,,communication deficits responsible for your name calling, anger, malice, misdirected anger, all contribute to your misinterpretations and self-contradictions.

_
is you,,LOL...and you're ego

>LOL.....that's

>"y-o-u-r"......Hahahhahaahahhahah!

Sure is,,but I don;t bother with it when entertaining myself,,,and I don't watch the keyboad and poke with an index finger as you, do Fankie-lite..

>Oh really? Then who was it that wrote this:

>LOL..

(...that's
"b-u-f-f-o-o-n"......Hahahhahaahahhahah!)

_
I wrote it,,why? It was in response to the swamp angel that attempted to use the word as an insult, yet failed to spell it properly. It would illustrate such if you didn't snip it and remove it from it's original context..oh wait,,you claimed you didn't snip..LOL.

>I didn't. All you have to do is read the post.

>You can read, can't you, Trog?

Yea, I can get used to this identity thing you placed upon me,,after all, as many times as you callled me many different names, it's only fitting you cite another example in which you probably and ostensibly know little about..LOL

>Ain't it fun when the door slams back in your

>face?

Especially when you're the recipient time after time and aren't even aware of it. I keep telling you you;re so far out of the loop, but you are hell-bent on searching for aliens and worried about me blasting your receive you can do nothing else but dream of me in your waking hours,,and I muts be invading your dreams, as well.

_
,matter of fact, twas yourself that asked me tone down my writing and choice of vernacular a few years ago, as it was confusing you. You took issue with the word "ascertain",,it's all in there, Frankie,,you're like a spoiled child,,your needs were tailored to by myself (whoops,,typo) in the grandest gesture of good-will, now you cry

_
>The crying you hear isn't coming from me! You
>wanted to make an issue out of spelling, I

>simply accomodated. LOL!

Umm...there is 2 "m"s in the word you mis-spelled <g>. Anyhow, not true. I never wanted to make an issue out of spelling,,it was YOU that wanted to make an issue out of words, their usage, the grammar, etc.....I merely threw it back at you with your incompetent spelling examples, as it was you that put them out there,,I just pointed them out AFTER you took issue with my posts.,,and here you are crying about, once again, what was iinitiated by yourself.

_
you want it back the way it was,,,now, come on over here, sit down, shake the vermin from your coat and the lice from your hair and inform us once again how you arrived at such illustrious gaffes concerning the translation of dead Latin rules to English. To what school, teacher or class in specific, can you cite that mistaught you such blasphemous incompetence and butchering of the English language?

>You mean when I educated you (a

>self-proclaimed

Tut--tut,,you must feel like you are "losing" your imagined and waged battle you so often speak of...such terms as"winning" and "losing" illustrate your dire need for acceptance. You always enter a lie when cornered. There was no "self-proclamation" on my behalf, as you certainly know. No, Frankie-lite, you inquired as to my profession,,,that nullifies your lie, and you;re ate up with it, once again. No need to lie, Frankie-lite,,self-degredation is a trait only

you find enjoyable,,oh, and Lelnad with his "self-professed" pleasure
and release he arrives at through "messing" with cbers.

>Try and stay on-topic, Trog.

But you entered a deliberate and malicious lie, Frankie-lite. My retort
was in response to your topic.

>"professional journalist") on the proper use of

>prepositions?

LOL..you were taught once, and provided the proper documentation
concerning the error you made.

>You provided no documentation, just your

>"beliefs".

LOL...google my "belief", Frankie-lite.Quite a feat having "my" belief
taught in each and every
English class across the country. As a matter of google, KC8LDO claimed
he presented my "writings" that he selectively took from usenet, to his
"professors" at one time,,,,,,(probably the same day he claimed all
those girls at the college were interested in dating his nappy little
head). So here Lelnad can assist you with two dilemmas,,eh Frankie-lite?
He can provide you the addy in which to send you books, and he can share
your determined-to-remain-ignorant-forever status with the entire hammie
and cb community upon ascertaining this little rule of Latin that has
you acting like you just failed the final exam for a passing grade..he
merely needs verify the claims, yours or mine, with his "professors"..or
you can exert very minute brain power and educate yourself, but you
proved that almost impossible.

–

The error you made is very prevalent
among high school composition students and those who may have taken
Latin. Unfortunately, you should have taken English, or (hyuk)
"Communications". That one can live to be as old as you and
steadfastly be determined to remain ignorant
merely because of their inability of self-control and personal feelings
is a pretty pathetic
life to lead.

>If you don't have a decent grammatical

>reference on your desk, I would be more than

>happy to send you one at no cost whatsoever!
Go ahead. Lelnad claims he has the address.

>I doubt he does,

So you now call Lelnad a liar?

> and you are too afraid to disclose your

>identity. Tell ya what: Get yourself a PO Box

>and I'll send them there. That is unless you

>are so paranoid that you think I work for the

>post office and can trace PO boxes....

No, no, no, you should have thought of this prior to making your claim, but you never think about what you say prior to actually saying it Frankie-lite. Go on now, keep your word.

>I'll even include a recent Webster's so you can
>look up the definition of all those ten-dollar

>words you have used but didn't understand.

You are really pissed off again, musta lost something in addition to self-respect...your anger insists it. Go ahead and post the addy, Frankie-lite. Perhaps Lelnad can assist you, after all, it was his claim.

_
is so heavily involved that you are like a rabid animal, out of control, lashing and snarling in all directions because no one will pull out the splinter I jammed in your paw..LOL.

>that he looks like a

>baffoon

LOL.....that's "b-u-f-f-o-o-n"......Hahahhahaahahhahah!

>when he ridicules others

I ridicule no one that has initiated no hate.

>LOL.....that's a

>double-negative......Hahahhahaahahhahah!

You're the double-negative.

>No, YOU'RE the double-negative!

>Oh yeah? Well YOU'RE the double-negative

>times TWO!

>But YOU'RE the double-negative times

>INFINITY!

>Oh yeah? Your mommy wears combat boots!

>...oh brother.

>for not catching his carefully worded

>escape-routes,

Once again, 'ol twist demonstrates the devastating effect he has on your twisted psyche. Booze doesn't agree with you, you are much to angry and have way to many inner demons. One should learn to like themselves, then ultimately love themself,....your self-hatred really rises to the surface when you're angry. That man in your mirror at the end of the day really doesn't like what he sees.

_
>And you have done a wonderful job this time,

>Twist.

>....Hahahhahaahahh

Thank you,,in fact,,so have you....outstanding, actually. I don't mind ascertaining you do your daily job illustrating my intelligence.

>Or lack thereof, as you disclosed in the

>beginning of your reply.

Your misinterpretations have provided more than adequate disclosure concerning your opinions.

>My pleasure, but it's a shame you don't use it.

You're out of the loop. You're like a poor little boy with no money on a hot summer day with his nose pressed up against the ice cream sandwich store, salivating so badly for what you can never attain.......

>The only 'loop' here is the hoop you jump

>through on my commands. LOL!

If everything was copacetic, you would have no use for insults, personal attacks, anger-filled posts, malicious lies, and self-contradicitons you are fast becoming known for. You say one thing, Frankie-lite, and do another. It is why you are viewed as a lid and hypocrite. Your failure to see yourself as others do hits home only at the end of the day in the mirror you seek to avoid, due your self-hatred.

Franklin can help! Pay him money and he will help you to violate federal
regulations! But don't ask him to help you pay the fines...LOL!

_
(While he certainly can help you break a
number of federal regulations,)

_
Balderdash. Not only that,,but ludicrous. One can get information on how
to make bombs, poisons, drugs, etc. from the internet. Does the internet
become your accomplice?

_
>Hey Twisty, don't you realize that you are

>chastising your cheerleader?

Another magnificent display of your communication deficit. Your personal
feelings rule over any common sense,,it's not about the person,
Frankie-lite, as much as you want it to be,,it;s about the content, but
from your displays of incongruous behavior and hypocritical actions, you
will never be able to learn that,,,after all, its effective
communication, something you prove eludes your grasp on a daily basis .
Someday you may learn how to separate your anger from your posts and
learn to concentrate on the content and not the person whom you know
from a can of paint but maintain otherwise..LOL

>So it was the "content" of my posts that led

>you

>to "believe" that I'm five different persons?

Would this be the same content that brought you to the brilliant
deduction that I was a hammie named Roger? Or used mindspring? Or
Frasso? Or this last poor bloke you called me? Or my "headers" showed
the same as "foghorn"? And that's only five..there are more.
This identity thing has you beside yourself, Frankie-lite...LOL.

_
>After all these years in the newsgroups, and

>all these people telling you that your quoting is
>screwed up, and you STILL can't get it right?

>Dumbass.

Awww,,,you're anger and reputation precedes you, Frankie-lite...LOL!

>And you still can't understand how those little

>arrows work. That's pretty pathetic, Trog.

Yet your concern for my state of being pathetic is much to brag
about....LOL.

_
Books on how to change ones ID, disappear, monkey-wrench, make
moonshine, etc., etc., have all been readily available since most can
remember. An inanimate object can have no input on one's actions,
period.

>They most certainly can,

No, they can't.

>especially when said

>inanimate object is controlled

Therein is your problem ,as always, junior,,,"control", or as in your
specific case, lack of. A book is not controlled, Frankie-lite, not in
the United States. your commie flap won't fly here,,

>Now you are saying that I'm a communist?

Keep reading.

>ROTFLMMFAO!!!

Cooter-Mae is done mating. Please get yourself up off my clean floor,
Frankie.

_
,,try Iraq or a
terrorist nation where such information is suppressed by men not unlike
yourself who feel such information is responsible for controlling
anothers actions. Putz.

>Where in the Constitution does it say that

>freedom of speech means freedom from

>criticism? It doesn't

I never claimed it did..however, you have, many times, in the past
attempted to censor this group and it's content with your warbling rants
and cries about how certain subjects do not belong.

>. Do you know why it doesn't?

Of course, but you;re doing the frrankie-lite back-step shuffle, as not one person has complained about your criticism..it's your unprovoked attacks, malice, lies, self-contradictions, etc. Nevertheless, you're being forced to face yourself and you're attacking the man holding the mirror without realizing you are at war with the man in the mirror.

-
Blaming the content is the same as blaming the topic, or another person, abdicating all personal responsibility.

>Go yell "FIRE" in a crowded theatre, then use

>that argument when you face the judge.

You're not a judge and are owned nothing. Poorly constructed analogies do nothing for your off-topic wails.

>So it was JFK's fault that he put himself in the

>path of a bullet, right?

Egad, but you were soused when you wrote this, little man.

>Not even close. Was the question too hard to

>understand?

I never pretended to comprehend alcoholic drunkards poorly contructed off-topic rants.

_
(In particular, I'm looking at the plans for his CP beam antenna and the Digital Speech
Processor kit. I have the skills required to construct either, but not the knowledge to know if either project is worth the effort.)

__
Any project one does to the best of their ability is worth the effort. Don't ever lose sight of that and don't ever allow another to tell you different.

_
>Research and investigation is effort that is well
>spent, and that is exactly what he was doing.

>Do you know how bats got around in caves

>before they developed their sonar? Trial and

>error:

Education for today: Sonar is employed underwater. Bats are not fish. Don't you love when a post comes back to bite you in the ass, Frankie-lite? Hint: Put down the booze.

>Education for today: SONAR -- SOund

>NAvigational Ranging. There is nothing about

>sonar that limits it's use to water,

Look up the definition of "sonar"
in the book you quoted, Frankie-lite....I did,,now repost its definition
for all to enjoy..

–

>especially

>since it was developed by nature and used in

>air long before humans walked the earth.

>Don't you love when a post comes back to bite
>you in the ass, Trog? Hint: Your obsession

>with me is making you more ignorant on a

>daily basis.

Frank, I direct nothing to yourself but replies..LOL. Not only do you
suffer from a massive communication deficit, your brain is pickled from
alcohol..LOL.

> ...flap, flap, flap splat! ...flap, flap, flap, splat!

Don't choke on your drink, Frankie,,,you're third in the rec.radio.cb
death pool and would cost some serious money if you were to asphyxiate
yourself. Smart money is on you having a severe myocardial infarction.

>If I had said what you just said you would have
>called it a threat.

No, I wouldn't have,,,this is your communication deficit acting up
again. Even remotely insinuating that I can somehow cause you a heart
attack is hilarious. You claim you're on vacation...take a trip, breathe
the fresh air, you need clarity...I'll be here when you get
back,,,promise.

>Kinda like how you navigate around your lies.

Check my sig.

>Ok. So?

That deficit in communication has become second-nature to you. I see you
have learned to accept it. Great. Perhaps you can grow up and move on
and not blame others for your misery.
Abdicating all perosnal responsibility has become quite the rule for you
as of late.

Vigilantism isn't necessary to enforce a law; all that is required is an active role in the enforcement process. And BTW, vigilantism is contrary to the entire system of justice we have, as it violates the rights of the accused, and is even expressly forbidden in statutory law in some local jurisdictions.

Frank Gilliland (Sparky@aimmcomm.com) wrote:
>For starters, I don't defend Doug's or Leland's

>actions, legal or not.

Start out your post with a lie.
You have in the past.

> They can defend

>themselves if they so choose. Secondly, there

>was indeed a lot of spam that filled this group

>with hate and perverted filth, and you had your
>slimy hand in part of it yourself.

No Frankie-lite, despite your bastardized attempts at fudging headers
and your claims but no posts to back them up, I have nothing to spam,
nor have I ever spammed. This is quite simple really,,,,,my ISP has
always had a zero policy for abuse, especially spamming. Lelnad also
thought fudging headers would get me tossed and was shown the fool he is
by men better than myself. Now, to put it all in perspective, my email
remains the same, after all these years, and open to the public. Look at
to which you have been reduced. How many accesses have you had pulled,
Frankie-lite? Of course, we can count up the posts (if the need arises
to dispute your lies) and check the time you were with certain posting
accesses,,,,,it doesn't jibe with the monthly service fees or free trial
offers, Frankie,,the only answer is you were a baaaad, baddd, man,
Frankie, and consider yourself above rules put in place for the good of
all.

>Thirdly, it was YOU that wanted me to join

>your little love-fest with Leland and Doug with

>your insinuations and allegations (oh, that's

>right, those were your "beliefs") that I was one

>(or both) of them, and/or part of an

>anti-Twistedhed consipracy that exist(ed) in

>your paranoid delusions.

Can always tell when Giilinad and Lelnad are angry,,,you both lie like
the dogs you are <g>.
I never used the word "conspiracy" to which you alledge......that's

Davie (The Hypocrite) Hall's favorite allegation.

>And finally, you continue to fan the flames by

>convincing yourself that your hallucinations

>were real, maintaining them even now as you

>continue to accuse me of being N7VCF

>(or Leland, or whoever it is you "believe" me to
>be this week other than who I am).

That not one is interested in ascertaining your identity refelcts the importance placed upon your spats. I thinks it's hilarious to watch you freak the hell out because you can't for the life of you comprehend why others do not share your beliefs.

>If your beleaguered existence can only survive
>by fighting with enemies that you created

>yourself, then by all means continue.

I created these enemies by speaking my mind, not with insults, not with initiated attacks. You thinking otherwise means squat, but no one is interested in your beliefs......something else you can't get past..

>But once in a while take a stroll out in the

>mushroom patch (don't forget to wear your

>bullet-proof vest in case there are more

>people like you in the area), munch a big 'ol

>toad stool and dream up some new enemies,

>because your game is getting real old and

>stale, Trog.

It's your game, Frankie-lite,,continue running, run little Frankie, run lke the wind.

_
Attempts to pull you out have resulted in you pulling others down to your level.

>whenever you start forming loops by chasing

>your own tail (tracer-routing people's IP

>numbers), because it usually means that you

>are about to do something extraordinarily

>stupid.

LOL..geee,that wasn't effective,,,curse me, call me a name or
something,,you're slipping.

>That's because you have filled the vat so far

>it's overflowing.

You're the one complaining. You're the one with the problems. You're the
one attempting to abdicate personal responsibility by blaming others for
your misery.

>I have no misery. But people are responsible

>for their own miseries, including getting

>popped when they choose to operate illegally.

Like N8WWM.

>So did you trace it far enough to see that the

>block holding his IP is subbed out from AT&T

>to MCC in Middletown, NY? You must be

>REALLY paranoid to trace the headers of

>people that agree with you.
==========
LOL,,I didn't trace anything. You're out of the loop. Jersey is THE
place to get linears these days.

?Oh really? I thought

Another problem.

>Sometimes I wonder if you think you are being
>clever with your 'hack-and-attack' method of

>posting.

LOL...once again, it's not about ME, Frankie-lite, as much as you want
it. , no,,scratch that,,,,as much as you NEED it to be. You continue to
happily sacrifice what little intellect you have, and laugh insanely as
you give away what dignty was left in the persuit of "ol twist! Haha!.

_
>But you know what would be even -more-

>clever? If you could learn how to quote. Now

>THAT might impress somebody!

Attemts to impress have always been your forte, not mine. Another
failure that contributes to the obvious self-haterd you possess.

>the place to get linears

>and other illegal CB equipment was through

>yahoo auctions.

Why mess with an auction when one can go straight to a source? I suppose if one wishes to pay more,,this would illustrate why you "thought" the way you did.

>Prices on auctions are usually

That's right, Frankie-lite,,but you have learned by now nothing is "usual" when it comes to "ol Unca twist...LOL. Its the bane of your internet presence, and most recently, overflowed into your off-pc and real world life. How sad.

>less than the

>original price, which makes good sense

>especially if the equipment is still being

>manufactured.

>So where do you get your information that

>Jersey is the place for amps?

You're out of the loop, Frankie-lite,,and you're not about to be brought in, no matter how nicely you ask.

>Uh huh. Just as I thought, you can't answer

>the question.

Sure I can, Frankie, and I have many times to those seeking assistance. My email is quite active these days. Once again, you illustrate your frustration when one laughs at your foot-stomping demands.

_
It needs repeated: Never have I met
anyone so determined to remain ignorant, such as yourself. Do try to not allow your personal feelings to cloud your posts, Frankie-lite,,,

>Don't worry, I won't.

Beginning when?

_
Just as I thought, can't answer the question..LOL

>Now who, other than yourself, is saying that

>"Jersey is THE place to get linears these

>days"?

Gee, Frankie-lite,,,,your communication deficit is really reeking havoc on your psyche.

>And you can't answer the question.

Sure I can, Frankie,,but I won't, no matter how much you cry and want in on the loop, it ain't gonna happen.....

>Gee, what a suprise. When the old "I'm not

>going to reveal my sources" excuse doesn't

>work you jump right to the off-topic personal

>attack.

The attacks have alwaysbeen initiated by yourself, Frankie,,I merely toss them back your way. You will find no post by myslef attacking anyone in any manner, if you bother to read the entire thread in context.

>What's next in your arsenal of defense

>mechanisms, Trog?

I need no defense. You're impotent.

791. setting up an indoor CB set

Newsgroup: rec.radio.cb
Date: 2003-07-11 22:54:04 UTC
From: wrfortm@aol.com
Message-ID: <9f398558.0307111454.1c01342e@posting.google.com>
Source record: 162325

I was recently given a nice little Uniden CD, I am not able to use the car enough to make it worthwhile to install it there, how would I go about setting it up in the house? I have a small room where I have my computer and office stuff.I am a Korea Vet with heart problems so I spend quite a lot of time indoors. I am a newbie so please walk me through it. Any help will be greatly appreciated. Thanks, wrfortm@aol.com

>wrfortm@aol.com

It's pretty easy as long as you don't plan to tweak your system to perfection.

First you need a regulated 12 to 14 volt DC power supply, and wire your radio to it just like a car battery. Important note: Even if the power supply has a fuse or circuit breaker, don't cut off or bypass the fuse connected to the power wire on the radio, or use a bigger fuse than it's supposed to take. It's there to protect your radio if something goes wrong with your power supply or if you accidently hook it up backwards, and removing it or making it bigger will defeat that purpose.

Next, you need a base antenna (as opposed to a mobile antenna). It's easiest just to buy one, such as an Antron or Shakespeare, but you can build your own if you really want. Either way, mount it as high as possible, following basic safety precautions, of course. Because there are so many ways you can do this, it's best to find someone in your area that can help you out.

You have to connect the antenna to the radio, and to do that you need coax cable. This may be obvious, but what may not be obvious is that you don't want to use coax that will short in hot weather or has to be replaced every three months. For that reason, DON'T use foam-type coax (usually designated something like RG-xxF/U, the 'F' meaning 'foam'). Also, coax can be expensive, and if you don't want super-duper performance then standard RG-58 is fine. And don't forget that this stuff isn't solid wire, so don't pinch it with the staple-gun, don't make sharp bends, etc. If your cable is too long, don't cut off the extra, just coil it up into a figure-8.

And don't forget the ground. Sink an 8' ground rod as close to the bottom of your antenna mast as you can, or at the point where the coax enters the house. If those two locations are more than ten feet or so from each other, sinking a ground rod at both places would be better, and you will certainly appreciate two of them if and when lightning hits your antenna. Speaking of lightning, it's good practice to unplug your coax from your radio when not in use -- just remember to plug it back in before you transmit!

That should just about do it. I'm sure there are a few things I missed that others will point out. But beyond this basic setup, I would highly recommend an external speaker. Your radio has a jack in the back that you can plug a speaker into directly. It will sound a whole lot better than the cheap little speaker built into the radio.

If you have any other questions, feel free to email me.

793. Re: setting up an indoor CB set

Newsgroup: rec.radio.cb
Date: 2003-07-11 23:42:24 UTC
From: Skipp <soaponaropealltiedupintheshower@yahoo.com>
Message-ID: <beni10gdd1@woodrow.ucdavis.edu>
Source record: 162327

If your Uniden is a common auto type CB, you need a DC power supply... often refered to as a 12 or 13.8 volt DC power supply. You should not need more than 3 to 4 amps of current capacity from the supply.

You will need to run coaxial 50 ohm impedance radio cable from the radio to an external (outside) antenna. There are two common cable part numbers, one RG-8 which is standard outside coax for CB applications. The other RG-58 is smaller auto type coax and will work in short runs of base station operation.

Radio Shaft (shack) and other electronic suppliers sell the power supply and the coax cable.

The computer will probably generate noise into the CB when its on... it will probably have to be off if you want to listen to the CB without extra noise being generated.

A practical antenna would be a vertical type, often refered to as a Big Stick or similar clones. Many times the clones are crap. Big Stick is/was a brand and model of a good antenna. There are other types and models.

Be prepared to hear both heaven and hell playing out of the speaker when you turn the radio on.

enjoy
s.

oh heck does frankenstein partake of the adult beverages???? man that
is not a good thing.....that stuff doesn't mix well with the mood
altering drugs.....

795. FREE MIKE WIRING TIPS & TRICKS

Newsgroup: rec.radio.cb
Date: 2003-07-12 00:28:52 UTC
From: Lou Franklin <lou@cbcintl.com>
Message-ID: <2ilugv82qu2bvdb6stlj3ij56b2u74m3ec@4ax.com>
Source record: 162329

Trying to fix a mike, or wire a new mike or power mike? Can't figure out which mike socket pin(s) and wires are which? Plagued by RF feedback squeal? Check out our FREE mike wiring guide. Everything you need to know on the subject! Follow this link:

www.cbcintl.com/docs/mikewire.htm

We specialize in CB books, plans, kits, and high-performance CB accessories. Please visit our Web site to see all those "goodies" you just can't find anywhere else!

www.cbcintl.com

You can also download our complete CB catalog, or just the Order Form from the home page. We've also got a new Email Order Form (for VISA/MC) if you're in a hurry.

* *
In case you didn't already know...

Who are we? Since 1976 we've been the leading supplier of books, plans, and kits just for CB radio. Do-it-yourself repairs and modifications, 10-Meter Ham conversions, amplifiers, FM converters, bleedover filters, adding new frequencies, etc. Secrets of how to increase your power, range, and privacy.

For product questions or additional details
on what we offer, please email us directly at:

That's funny, my first post all day was in reply to you.

> Please try to come up with your own material, leg humper.

I have been dickface you keep stealing it, now go lay back down, I see your
following me around again.

Not really, you just need to know how much you can get away
with, when you bid. Oh, and understand the product you are
applying, and be licensed, insured, and equipped.

It ain't rocket science, it's just a niche..

YOU ARE AN IGNORANT FOOL THIS ANTENNA IS THE FINEST ANTENNA YOU CAN
GET
I HAVE USED IT AS A BASE ANTENNA FOR MANY YEARS AND IT WAS STOLEN FROM
ME
PEOPLE WERE AMAZED AS TO HOW GREAT IT WAS AND THEY CAME TO MY APT
BUILDING AND STOLE IT. I LIVED IN FOREST HILLS, NY AND SPOKE WITH
MOBILES IN BELMAR NEW JERSEY AND BASE STAIONS IN DARIEN CT. THEY
TOOK THE POWER OF A 21 FOOT ANTENNA AND SHOVED IT DOWN INTO A 39 INCH
ANTENNA NOW I AM LIVING AT 2,200 FT ABOVE SEA LEVEL HIGH IN THE
POCONO MTNS AND I GOT IT AND I TALK WITH BASE STATIONS IN NYC AT NIGHT
WHEN THE CHANNELS ARE QUIET STATIONS THAT ARE 140 MILES AWAY I AM AT
5 WATTS OUTPUT NO LINEAR YOU SHOULD TAKE THE DILDO AND SPIN ON IT A
FEW TIMES YOU GOT A LOT OF FUCKING NERVE TO ANSWER MY POST WITH THAT
SHIT YOU LOW LIFE COCKSUCKER

IT WORKS GREATER THAN YOU CAN IMAGINE... IT CAN HANDLE 500 WATTS OF
POWER
IT IS DESIGNED TO BEAT ANYTHING YOU GOT EXCEPT A BEAM

814. CLEANING UP CB RADIO...

Newsgroup: rec.radio.cb
Date: 2003-07-12 11:15:30 UTC
From: RASTA <sp>
Message-ID: <m5SPa.135902$49.5343711@twister.socal.rr.com>
Source record: 162348

For the amount of years I've spent here on this NG, I have yet to see (hear) the bandwidth cleaned up. More truckers are getting hired, more neighborhood idiots are still throwing "10-95's" while you're chit-chatting, newer people are skip talking... what good is arguing here gonna do for cleaning up the band?

Should I answer that?

Don't need to.

This NG is saved for open conversation about CB radio. Not random bashing. Everybody wants to know how to mod a radio. Everybody wants to know where to purchase an amplifier. Everybody wants to know antenna efficiency and coax lengths. Is this breaking the law? NO! Discussing CB radio subject matter doesn't constitute the individual breaking any laws.

Know what the funny thing is? I only know of "1" (one) person that was on this NG that got turned in to the FCC. The rest is still keying down. Imagine that! With the rants of Leland, Doug, Frank, George, Ric and Dave, it ain't doing no good for these guys. Even when they go to there graves (like Ric), ain't nothing gonna change.

AKC??? You're wasting your time. You guys need to get out more often. Go play with your radio or something. Take it to the streets if you folks want something to happen. Don't bring it here to the NG. No one cares about your rants. Look at the past 8 years since I've been here. Nothing changed!

I will still be here, in the background looking for CB radio conversations. I will still key the mobile on the air and I will still be looking for skip from elsewhere. We ain't going anywhere... we will still be here. Good luck "AKC" in your endeavors... its like trying to pour the ocean into a hole dug into the beach sand with a cup. Take care...

>cleaning up the band?

Because through this newsgroup an anti-illegal position can be promoted which
can directly influence the band. The concept is universal and it works; whether
you call it social reinforcement, peer-pressure, or simply setting a good
example, it's one way that responsible CBers can improve the situation.

>Should I answer that?
>
>Don't need to.

>coax lengths. Is this breaking the law? NO! Discussing CB radio subject
>matter doesn't constitute the individual breaking any laws.

Nobody said it does, a point you seemed to have missed for the past several
years. What it DOES constitute is the -encouragement- for people to break those
laws by making the act much easier to accomplish. There are at least two
different ways this 'information' makes lawbreaking easier:

First, and most obvious, is that the information eliminates the need for the
prospective lawbreakers to learn the technology, allowing them to take a
criminal approach -- the 'quick and easy path' -- to accomplish their goals. I
sincerely believe that if such information wasn't freely available, many more of
these people would either educate themselves enough to turn their interest in
radio into a legitimate hobby (or even a profession), or find it too difficult
and abandon radio piracy in favor of more rewarding and responsible goals.

The other way is from the attitude that these laws are trivial. Technical
information on how to break the law with CB radio is usually provided without
any warning that its application may cause interference to CBers and non-CBers
alike, and most of the time it's not said that its use can be illegal. On the
contrary, some even go so far as to play lawyer, informing people that federal
communcation laws are "only rules" to be ignored. Then there are those that
would have people believe the fantastic, such as that CB operation is impossible
without illegal modifications or equipment, or that overmodulation is a good
thing, or even that RF power is the end-all-beat-all of human existence. This

only encourages illegal radio, and does absolutely nothing to improve the band or the newsgroup. And it certainly doesn't help the fence-sitting CBer to make a decision that's not only responsible to himself (and perhaps to the financial security of his family should the FCC slap him with the typical multi-thousand dollar fine), but responsible to all the other CBers that will be negatively impacted by his selfishness.

So discuss all you want. But when someone else brings up important topics that are ignored in those conversations, just remember that by attempting to supress those topics you are demonstrating your contempt for the Constitutional right to free speech, the very right you embrace while discussing radio piracy.

>Know what the funny thing is? I only know of "1" (one) person that was on
>this NG that got turned in to the FCC. The rest is still keying down.
>Imagine that! With the rants of Leland, Doug, Frank, George, Ric and Dave,
>it ain't doing no good for these guys. Even when they go to there graves
>(like Ric), ain't nothing gonna change.

That's like saying that we should all just lay down and die now because we are all going to die eventually. Well, feel free to do so, but I have other plans. Contrary to your opinion, things do change. Sometimes they change for the better and sometimes for the worse, but they do change. Some people would rather promote apathy and use the "if you can't beat 'em, join 'em" excuse for their lack of responsibility. Some, such as myself, would rather take an active hand in changing things for the better. Because if everybody gives up and starts doing whatever they please without conscience or restraint, the whole thing falls apart into anarchy and the FCC drops the band -- not my idea of a bright future for CB radio.

>AKC??? You're wasting your time. You guys need to get out more often. Go
>play with your radio or something. Take it to the streets if you folks want
>something to happen. Don't bring it here to the NG. No one cares about
>your rants. Look at the past 8 years since I've been here. Nothing
>changed!

Quite a bit has changed. Anti-legal CBers such as yourself no longer control the newsgroup. Most have learned that everyone here has an equal voice, that our voices can't be 'stepped-on', 'keyed-over', or otherwise supressed the way they are on the radio. And loss of control over the airwaves by illegals isn't far behind: Radio direction finding technology also falls under the 'freedom of speech' umbrella, and their popularity is growing by leaps and bounds. More and more CBers are learning that they can self-police their band just like the hams, and many have learned that it can be fun at the same time. And because illegal CBers are operating with more power, less responsibility, and dirtier radios than ever before, the task isn't very difficult. Things have changed, and will continue to change whether you like it or not.

>I will still be here, in the background looking for CB radio conversations.
>I will still key the mobile on the air and I will still be looking for skip
>from elsewhere. We ain't going anywhere... we will still be here. Good
>luck "AKC" in your endeavors... its like trying to pour the ocean into a

Do whatever you feel you need to do. So will we.

818. The Whole Story

Newsgroup: rec.radio.cb
Date: 2003-07-12 18:23:07 UTC
From: frankspankmonkey@aol.com
Message-ID: <20030712142307.03267.00000185@mb-m12.aol.com>
Source record: 162352

The whole story, up to now….

(Knock at the door) Aaron opens door wearing his skimpiest thong underwear

Aaron: Hi Sparky! How are you!

Sparky: I'm good Aaron. Is dinner ready?

Aaron: Almost. In the meantime, you can snack on me, but we need to hurry before George gets here.

Sparky:(screaming) Aaron! Will you shut up with the advances! I already told you I've started to like women now! Now leave me alone!

Aaron: OK, OK! I just thought we could be like the old days again.

Sparky: No, I'm really going to stick it out this time.

Aaron: (sniffling) Ok Sparky, have it your way. I'll respect your wishes.

Sparky: Where's George? Do we have to wait for him to eat?

Aaron: Yes, he's bringing the salad.

Sparky: OK. Got any snacks?

Aaron: I think so, let me check.

(knock at the door)Aaron answers the door.

Aaron:(exclaiming) George! My God! What happened to you?

George:(crying) I was just out minding my own business, following this little girl, and all the sudden, wham! Her Dad must have seen me and punched me. I had just asked if she wanted some candy too. I think I could have had her. Then the Dad pulled out of the window of my Pacer, and beat me some more. I think he dislocated my shoulder too.

Sparky: Can we eat now?

Aaron: Sparky, can't you see George is hurt? Go get one of the steaks for George's black eyes. And while you're in the kitchen Sparky, get some ice for his broken nose and busted lip too.

Sparky: OK, but I ain't eating the steak that you use on George's eyes!

Aaron: OK, whatever!

(Sparky spends fully 5 minutes trying to figure out which steak is the smallest, so he can have the biggest…then finally he returns)

Aaron: God Sparky! Why did you take a bite out of it? It's raw, for Christ's sake!

Sparky:(unintelligible mumbling caused by mouthful of raw steak)

Aaron:(grabs steak from Sparky and applies it to George's eyes) There now George. Is that better? Aaron knows how to make you feel better, doesn't he?

George: Yes Aaron, it's much better now. Thanks, you know I bruise easily.

Aaron: Hey Sparky, light the grill.

Sparky: Hey, those steaks ain't half bad raw! Do we really need to cook them?

Aaron: My God Sparky! Sometimes you act like a Neanderthal! Light the damn grill!

(Sparky goes out back, turns on the gas, clicks the igniter repeatedly, nothing happens. Goes back inside for matches and returns)

Aaron:(just as Sparky lights the match) NO! STOP!

(loud explosion)

Sparky: (screaming) I'm on fire! Somebody help me!

(Sparky runs back through the house with his beard on fire, screaming for help. Aaron and George race behind him with teacups filled with water)

Finally, Aaron and George manage to catch Sparky and beat out the fire in Sparky's beard with the teacups.

Sparky: Thanks guys! That was close! I saw my life flash before my eyes.

Aaron: No prob Sparky. You know we love you.

George: Speak for yourself, Aaron! Faggot!

Sparky: Can we eat now?

George: Well, we could if you hadn't blown up the grill!

Aaron: It's OK Sparky. We'll just grill the steaks on the stove.

Sparky: I don't wanna wait! I'm getting dizzy. My cholesterol must have dropped below 300.

George: Here, drink this.

Sparky: What is it?

George: Bacon drippings. It will bring the cholesterol level back up in your blood.

Sparky:(drinks greedily) Burp! Thanks George.

George: No problem. Hey Aaron, you still have that "Little Girls Gone Wild" video?

Aaron: I think so…check over there in the gay porn by the VCR.

George: Faggot! (looks for the tape)

Sparky: I'm hungry! Let's eat.

Aaron: Just hang on a minute. Let me get these damn steaks cooked. (throws the steaks in the pan)

George: (tearing his eyes off the video) Sparky, get the salad and dressing ready, will ya? I'm busy now.

Sparky: OK, George. (Sparky sets the table)

Aaron: How do you guys like your steaks?

Sparky: Raw is fine with me.

George: (rubbing his crotch while watching the little girl video) I don't care. Yeah, raw is fine with me too.

Aaron: (mumbles) Damn weirdo's…

Aaron: (grease splatters on Aaron's hairless chest) Ouch!

George: Aaron, do you mind if I take this video home with me?

Aaron: Sure, take it. You know I don't like females.

George: (under his breath) Faggot!

Sparky: Can we eat now?

Aaron: Yep! Steaks are done. (Aaron places them on the table)

Sparky: I'm first George! That's my steak!

George: Whatever Sparky! Hell, I'm just gonna leave now. (grabs the video and heads for the door)

Aaron: Where you going, George?

George: Um…uh…I'm not really hungry now. I think I'll just watch this tape at home.

Sparky: Good! Gimme his steak.

Aaron: OK George, see ya later.

George: Bye

Scene: Much later in the evening after George has gone home to watch his kiddy porn, we return to find Aaron and Sparky enmeshed in each other's arms.

Aaron: Sparky, I knew you would come around.

Sparky: Well Aaron, I kind of feel guilty…almost as if I'm slipping back into my old self. I've really tried to kick this man habit, but I can't seem to stop having feelings for you.

Aaron: Well Sparky, I always knew we were meant for each other.

Sparky: I only ask one thing of you, Aaron.

Aaron: What might that be, Sparky?

Sparky: All I ask is that you don't breath a word of this encounter to George.

Aaron: Fair enough. I know he's a bit of a bigot.

Sparky: Yes he is, but he's still my only real friend. You know, I can't count the times that he's tried to save me when I've gotten in over my head on the newsgroup.

Aaron: I know Sparky, and he's done the same for me. I really love him, but I can't let him know that.

Sparky: So, we're sworn to secrecy, right Aaron?

Aaron: Absolutely! Remember, we did take the ACK pledge.

Sparky:(chuckles quietly)

Sparky: (tentatively) OK Aaron, I'm all yours.

Scene: Fade to black…

To be continued…

At the very left side of your keyboard, three keys above a key labeled 'ctrl' is a key labeled 'Caps Lock'. Press it once and ensure the little light labeled 'Caps Lock' goes out. Now you'll be all set :)

73 from Rochester, NY
Jim
(btw, at 2200 feet, you have more than a 66 mile range to radio horizon. Yes, a handheld with a rubber duckie should make it 66 miles and more from your location)

Source record: 162359

I have seen this time and again on the internet.

"Frank'..goes by millions of names. He is an excellent example of a person who bought a computer, has few if any friends and uses the internet in lieu of medication, counseling or just 'getting out more.'

The millions of "Franks' out there can be seen in every group from radio to religion (or lack there of.) to CD collecting newsgroups.

Their sole purpose in life is some 'compulsive' behavior disorder that drives them to pay hundrends of dollars for a computer just so they can excercise their mental disorder on the general public without any face to face contact. A type of high tech 'sniping' that serves no purpose other than to satisfy some mental abberation that only counseling and possiably medication could alleviate.

Now if some think I am being mean to "Frank", I am not.

"Frank" has one very good point about legality.
In the past, CB was licensed as a way to control it. Abeit dismally.
"Frank' or "Franks' like him, are an excellent argument why people should be licensed for the internet...of course..that will never happen..so like the "Franks" on CB and ham radio or the little mouthy guy in the bar. You ignore him.

As said earliar, "Franks' can be seen in every group.

"Franks" as this one did, also rant about their 'right' to 'free speech'. The real 'right' they want is someone to acknowledge them. Because in their dismal little world, somewhere along the way they got abandoned, fired from their job, lost by their mother, their sister/brother hates them, the girls/guys don't find them appealing, or when they were a kid their puppy did'nt play with them..whatever....they must have some kind of attention to prove to themselves they are worthy or important.

"Franks' use the 'right of free speech' and a computer as a bandaide to hide their mental and social disorders so they can excercise it on people whom they never met or know.
They care little about the hurt they cause, interupting civil exchanges. They only care about themselves. Much like a sociopath who can justify anything.
If they are not on the internet excercising their disorder (Note: not free speech..this has nothing to do with 'free speech', it's about a mental abberation they are displaying.), then you can find them on the CB, Ham radio on 40 and 75 meters, your local tavern or the busy body next door who knows when you leave or come home.. Every community has at least one.
..you know them..the ones who rant, butt in..generally obnoxious little

people who got their milk money taken from them at school when they were little and never got over it..
"Franks' are compulsive disorder types who has to have the world their way. They won't step on cracks. Have to have their towels folded a certain way. A rigid personality that if one little thing is out of place, then the world will end..at least their world.
They must 'prove' some obscure point or their world will crumble. They will argue about a point that has no relevence in their real lives, only in their fantasy world where they are, or think they are in control.
Franks basically fall into two main catorgories.
The first type of 'Frank' are called "trolls'..these people know they are obnoxious and as said earliar, looking for attention. They make outragous or inflamatory statements to get a response. Simply because, they cannot interact in the real world. If you met a "troll' (I have..), he is a dismal little person with no life. Shy..reclusive..few if any friends..
He would never say what he does on the interent to a 'real' person. He excercises his disorder on the internet, in his fantasy world. We have all seen them on CB. The mouthy guy.
But when you track him down, he is a little guy, has'nt taken a shower in a week, his girl left him and is working at the local car wash. You feel so sorry for him, you give him $10.00 and leave. You pray his bad luck is not contagous..:)

The secound type of "Frank' are serious about their 'beliefs' in that they display their compulsive disorder by making wild claims or 'polices' groups. Their rants can range from Government coverups, CIA is watching them..(or you..), UFO's are after them, CB's are evil, God is bad, there is no God, the Teletubbies are gay and are after your children.
They spend an outragous amount of time arguing about something with absolutely no relevence in the real world. Because if they don't, something bad will happen. At least that is what they believe.
The secound type of 'Frank' is far more dangerous then the 'troll'.
The secound type 'Frank' actually 'believes' his rant and end up as Postal Workers..: P

Again, I am not being mean to 'Frank'..

'Franks' are a sad truth about the internet. The good thing is we have 'filters' and 'killfiles' to delete these 'Franks' to make our day alittle more enjoyable so we can talk to people and exchange ideas. You may do so if you have "Outlook' under "Message'..

The reason to use killfiles is not because your being mean, or don't want to read his 'free speech'. The reason is 'Franks' are annoying and have little to contribute. And since it is a disorder we do not want to enable them thus causing their condition to worsen.

I have just added another 'Frank' to my killfile..

829. Re: Modulation percentage

Newsgroup: rec.radio.cb
Date: 2003-07-12 23:18:20 UTC
From: Jim Hampton <aa2qa@frontiernet.net>
Message-ID: <0H0Qa.430$9c2.332@news02.roc.ny>
Source record: 162363

I sent an off-group message explaining this. The reasoning is quite simple. The audio signal must supply enough voltage to just cut off the DC power supply at maximum negative peaks. This would imply that at positive peaks it will double (for a brief instant) the power supply voltage. Double the voltage will cause (by E squared / R power formula) the *peak* power to be 4 times the unmodulated carrier. Now, consider the audio voltage. It's *peak* voltage equals the DC voltage to the final. Hmmmm ... the RMS voltage of that audio signal is only .707 (square root of two divided by two) of its' peak voltage. Feeding into the same impedance, it will develop only half of the power (E squared over R or .707 times .707); therefore, you only need 1/2 of the unmodulated carrier power in audio power to modulate at 100%. This leads to the numbers in my original response.

830. Re: recomended antenna for CB in a boat

Newsgroup: rec.radio.cb
Date: 2003-07-12 23:22:04 UTC
From: Jim Hampton <aa2qa@frontiernet.net>
Message-ID: <wK0Qa.431$Gp2.152@news02.roc.ny>
Source record: 162364

Scott, I'm not worried other than he might not understand that at that elevation (if skip isn't in), he has a huge advantage over most of us. Now if skip is in, then he'll have a more accurate idea of how the antenna works. Hope you had enough hankies to dry your tears :)

I had replied concerning this post off-group, but it appears that I probably should have posted in the group. In that transmitter being high-level am modulated, we have a power supply. In order to modulate to 100%, the audio signal will have to exactly cancel the DC supply at 100% negative peak. It will also add to the DC supply at 100% positive peak causing the final to see twice the DC supply voltage. Now, with a given impedance, what will the power of a sine wave be? Consider that it's peak voltage will equal the DC supply voltage. That means its' RMS voltage will be .707 (square root of two over two) its' peak voltage. The power that this RMS voltage will develop at this point will be (E squared over R) .707 times .707, or .5 .... one half of the DC carrier power. Now, at the positive peak, we see twice the supply voltage for an instant. E squared / R (we don't know the resistance value, but we can see where the power is going). This implies a *peak* power of (2*2) 4 times carrier power.

Hope this helps :)

Yes, but you *can* replace that antenna! A decent (yet still relatively small) antenna plus an increase to 2 watts would yield a considerable gain.

As long as it is a "regulated" or "stabilised" supply then, others have
said, that's fine.
The 77-095 should not take more than 2 Amps. I would expect that radio to
take about 1.6 Amps on transmit and only about 0.6 Amps on receive.

Regards,

Peter.

Understood. But through constant "bickering"? By all means, I can see and
respect that you and your fellow compadres are actively taking part in
trying to "take up arms" (per say) in reminding others about the legalities
of radio. But through this newsgroup, people wants information about RADIO!
Not Part 97 of the FCC Regulations. If "they" want to commit " radio
piracy", then that's "their" choice. Of course, your choice is to prevent
that... but that is your choice too. But constant arguments is not going to
influence anything but chase the newcomer away... and this newsgroup will
not fulfill its intended purpose. CB radio information.

> Nobody said it does, a point you seemed to have missed for the past

Franklin... whether this makes any sense, the internet's expanse is too
infinte to try to stop anyone(s) hunger for information. Whether they get
their information from here or not, there is too many websites that
information can be attained from. You or your counterparts cannot stop
that. Even if you try to throw in a little bit of the regulations in a
thread, info seekers will just move on and find other forums to get the info
needed.

> First, and most obvious, is that the information eliminates the need for

> and abandon radio piracy in favor of more rewarding and responsible goals.
>
This may sound bad, but CB radio will not influence anyone to accomplish any goals. It is a hobby. It is not a lifestyle. One thing is for certain... society as a whole doesn't need anyone from Louisiana, Washington State, Ohio, New York or Philadelphia to tell it what it can do and what it can't. Society is self-educated. It's the way it is. And trying to "STOP" that "freely available" information is like "...trying to pour the ocean into a hole dug into the beach sand with a cup."

I cannot challenge this. You are absolutely right. But... do you think that this will "scare" seasoned CBer's and newcomers? If people want to test their chances? They will most likely will. Not to bring up a moot and previously discussed topic but does "speeding" ring a bell?

> So discuss all you want. But when someone else brings up important topics
that

Free Speech is Free Speech... but COME ON! This shit is OLD! Even in technical threads that have nothing to do with radio piracy ends up becoming a "thread" not "discussion" of LEGALITIES. If I wanted a Forum mommy, I would asked for one...

.
> That's like saying that we should all just lay down and die now because we are
> all going to die eventually. Well, feel free to do so, but I have other plans.
>
YES! Please die. I don't care about your plans... just DIE already!

> falls apart into anarchy and the FCC drops the band -- not my idea of a bright
> future for CB radio.
>
As previously stated, CB radio is a hobby. Not a lifestyle. If CB radio is your "bread and butter", you might want to rethink your future. It's looking a little dim. Since its beginnings, when has CB radio "not" been in anarchy?

> Quite a bit has changed. Anti-legal CBers such as yourself no longer control the newsgroup.
>
WHAT? How dare you assume such? Because I look for skip on SSB makes me a "baby-killer" now? I could give a rats-ass about who controls the NG. I am here for technical conversations with like-minded individuals in a hobby that I enjoy. Maybe getting a HAM ticket is not my cup of tea. I could give a FUCK about change either. Again, I am here for technical conversations with like-minded individuals in a hobby that I enjoy. Sheesh...

> Most have learned that everyone here has an equal voice, that our

Dunno if this is what you're looking for but AES has an outlet in the
Cleveland area. (In Wickliffe)
That's pretty close to you. I'm not sure if they do CB repairs since they
seem to be primarily a HAM shop, but it might be worth looking into. It's
pretty easy to find, it's right on Euclid off of
I-90. Their site is http://www.aesham.com

Let me know if I can do anything else for you
Greg

where is the newsgroup charter then? does it stipulate that this group is
strictly international?
again, more than just a simple majority of this group originates in the
US.

>>generally from the US?
>
> I could, (income per capita, average American wage, access to bigger,

read on your part "Failed attempts as obfuscation..."
you're playing an old game and its time for you to put it up and start
talking like you really mean it.

besides, all that other mumbo-jumbo you mentioned in this paragraph has
nothing much to do with this group, now does it?

>
> LOL,,,Gee,,,it also doesn't say "Freeband is not part of cb".......how

> from your ass and tossed about as fact.
no. it doesn't mention freebanding. but then, you have decided to difress
from the topic at hand and have introduced a lot of extraneous information
ot relivant to the discussion at hand.....

> In addition, Frankiestein, (in what is becoming a familar scenario) had

> sharing the arrogance on display by yourself?
better break out that dictionary bud..... its "How Drole!"
as for "us": I mean the collective that is the american public. and most
of them won't admit publically (mostly out of pride). Besides, with this
"pseudo-intellectual crap" you've been spilling, all you are doing is
proving just how foolish you really are. you might as well stop while you

are ahead (if that is even possible for the likes of you).

>
>>and I suspect you are probably a

heh. well, before I was a ham, I used to be an avid CB'er.
However, if you are puttingyourself up as the best example of what a cb'er
is, then we should just do away with 11 meters altogether....

>information can be attained from. You or your counterparts cannot stop
>that. Even if you try to throw in a little bit of the regulations in a
>thread, info seekers will just move on and find other forums to get the info
>needed.

Of course this information can't be supressed. But it -can- be evaluated for
it's technical validity. For example, "swang" is a new word for an old concept:
DSBRC (Double-SideBand Reduced Carrier), a mode given up over half a century ago
because it causes more problems than it solves. So when a CB newbie listens to

some dummy talking about 'bird-watts', don't you think he would like to know the truth of the matter? Of course he would, and that's all I'm doing. It's the "golden-screwdriver" techs that spread this 'information', and instead of supressing it, I just tell what the 'information' really means so the CBer can make an informed decision as to whether or not to trash his radio.

>> First, and most obvious, is that the information eliminates the need for

>Society is self-educated. It's the way it is. And trying to "STOP" that
>"freely available" information is like "...trying to pour the ocean into a
>hole dug into the beach sand with a cup."

I think you are taking the word "goals" to the extreme -- I merely meant that if a person wants more from radio than what the CB has to offer then he has three choices: 1) Memorize the question pool and get a license; 2) Operate illegally; or 3) Find another hobby. And no, the information isn't going away, but as I said before, that 'information' is incomplete. If the CBer knows all the facts then he can make a decision that's better for both him and the band.

>> The other way is from the attitude that these laws are trivial. Technical

>previously discussed topic but does "speeding" ring a bell?

Since you brought it up, speeding isn't a federal offense and doesn't carry a maximum fine of $17,000. That may scare some, while it may be nothing more than a financial risk to others. But it's DEFINITELY something that everyone should know BEFORE they make that decision.

>> So discuss all you want. But when someone else brings up important topics

>technical threads that have nothing to do with radio piracy ends up becoming
>a "thread" not "discussion" of LEGALITIES. If I wanted a Forum mommy, I
>would asked for one...

There have been MANY technical discussions here that haven't become a thread about legalities. But you are right, many technical discussions do end up about legalities. Why? I'll tell you...

Just for the sake of argument, just how technical can CB get? I mean, the CB is a radio service that was intended to have minimal technical requirements, which is why there is no license (and when a license was required in the past it required no test of technical competence). Just hook up the power, run the antenna, plug in the mic and you're working (and to think that some people make that their hobby...LOL!). Yet most technical discussions seem to be about swang, bird-watts, keydowns, amps, flame-throwing antennas and being as loud as possible. IOW, most of the technical topics here focus around -illegal- CB, and that's why legal issues come up so often.

Slightly OT, why does everything here have to be about technical topics? How about making a hobby of COMMUNICATING on the CB? About the only posts made in this newsgroup even remotely close to -that- topic are Twisty's DX reports.

Doesn't anybody think about what's possible with CB radio? Like, how about setting up CB broadcasts for Amber Alerts, or organizing networks for public events? When was the last time you saw any mention of the REACT program in this newsgroup? :end rant

i visit u.s., get treated regal,
so i stay, who care i illegal?
i cross ocean, poor and broke,
take bus, see employment folk.
nice man treat me good in there,
say i need to see welfare.
welfare say, "you come no more",
we send cash right to your door.
welfare checks, they make you wealthy,
medicaid, it keep you healthy.
i go to college, for me its free,
and now i have a phd.
by and by, i got plenty money,
thanks to you, american dummy.
write to friends in motherland,
tell them come as fast as you can.
they come in turbans and ford trucks,
i buy big house with welfare bucks.
they come here, we live together,
more welfare checks, it gets better.
fourteen families they moving in,
but neighbor's patience wearing thin.
finally, white guy moves away,
now i buy house and then i say.
"find more aliens for house to rent",
and in the yard, i put up tent.
send for family(they just trash),
but they too, draw welfare cash.
everything is very good,
and soon we own neighborhood.
we have hobby it's called breeding,
welfare pay for baby feeding.
kids need denist? wife need pills?
we get free! we got no bills.
american crazy! he pay all year,
to keep welfare running here.
we think america a darn good place,
too darn good for the white race.
if they no like us, they can scram,
got lots of room in pakistan.....

But on the contrary, Frank. Speeding can be a cause of many felonious
behaviors. Like radio, like speeding. It is the same thing. Owning a
radio is not a federal offense. Operating it "illegally" is. Speeding is
not a federal offense. Speeding and killing someone is. Know what I mean?

> precursor to that "if you can't beat 'em, join 'em" excuse I mentioned
before.
>
No. It is a trend. "...beat 'em, join 'em" had nothing to do with what
was, did, is and will go on. And soon, like the CB boom of the '70's, it
will fade away and slowly creep back up again. That's the way it is and
that's the truth.

> WHOA there butthole, where did I say anything about being a "baby-killer"?
You

>http://www.ac6v.com/antprojects.htm

Thank you for the advice, and there is a L-O-T of information at that
site.

The circular polarized beam antenna idea is not unique to Lou
Franklin. I have seen the same concept promoted by Jo Gunn Antennas

"V Series (DX Antennas) - The V Antennas have a single feed line which
transmits circular polarity. This is the most effective way to talk DX
and hold the conditions the longest. For CB'er who wants to get the
most out of his skip talking, the V's will give the best performance
possible."

http://www.jogunn.com/jgwhich.htm

I had the impression that the Jo Gunn antennas were quality products
with solid design.

I understand that for those of you in the United States, CB is
restricted to ground wave communication. However, others in this
forum are able to talk skip without running afoul of our national
regulations.

Leaving aside the question of whether or not one should talk skip on
CB, Are Lou Franklin and Jo Gunn Antennas just blowing smoke, or is
there anything in their claims that CP beams are best for skip
talking?

Me too! Always have. That is the main reason for coming here but as
was mentioned by others before. The crap that goes on in this group
NEVER and I mean NEVER even affects the real guy on the cb. I mean
forget about the diehard guys as was said they dont even know this
place exists and for the ones that do and by the small chance even
visit here, they still get on their big linears and talk skip or
compete as they choose! It affects nothing in the real world but yes
it may have bothered some who are on this group. In reality for the
guy that at this very moment is using a 16 pill linear talking skip
and enjoying his setup, doesn't give a rat's ass that there are some
old geeky folk on some newsgroup somewhere that dont like what he is
doing. I mean even if I went and told him!
The bickering and all the childish sex talk does nothing to promote
the anti key cause.

Can you name a country or countries where unlicensed 11 meter DX hobby-type operation is specifically authorized? As far as I know, international treaty does not permit unlicensed "HF DX" radio services. You should not assume that some foreign country allows 11 meter DX just because you heard them on the radio. I would like to see verifiable proof, such a grant, authorization, or other form of governmental decree.

Thanks...

I think Dave Hall said it best:

"There are many people out there that are "on the fence" with regard to whether or not to follow the law or not. Those are the people that will hopefully read what is discussed here and decide that it might not be a good idea to break the law. THOSE are the people that we're trying to reach. Those that are hopelessly incorrigable will continue their anti-social ways until the law finally catches up with them. Of course you can't blame those of us that understand the purpose of law, from assisting the people entrusted with enforcing the law, by gathering evidence for them. It's called looking after our best interests."

They are only rules, part 95 is just that, rules. But they
aren't to be ignored, because after many repeated violations
they can charge you with breaking a "Law", but that is far
and few between.

< Then there are those that

Actually, now that I think about it, an unofficial "Amber Alert Channel" isn't such a bad idea. After all, the broadcasting of emergency information and road conditions is allowed. I think I'll send an email off to the FCC to see if it's legal to broadcast Amber Alert information.

>>

>NOW I'M STUPID... when does it stop, Frank?

When you stop making stupid statements, like me accusing you of being a baby-killer, or how you could give a FUCK about change.

> You're the stupid one that
>frequents this NG day in and day out, EVERYday for the past (3) years since
>my last post. I've read and you're still here. And you just don't get the
>notion that you are the subject of mockery by everyone here (except your AKC
>cheering section).

Don't forget that I was also the subject of harassment. And I'm not talking about basic trolling or flaming. I'm talking about being stalked, getting threats in the email, attempts to intercept my private email conversations, and having N7VCF's phone number posted hundreds of times with instructions on when to call and how not to get traced. But you didn't complain about that, did you? Instead you are complaining about ME posting "EVERYday" for three years, which isn't true at all.

> And you're calling me stupid? I work on my Harley
>instead of messing with these cats in here that do not get the message you
>and the AKC is trying to promote.

You want to talk about stupid? I worked most of my life in radio, spent five years earning my degree, work full-time as a BE and part-time in my own shop (and it ain't a CB radio shop). I spend a lot of time on the computer because it's a major part of what I do for a career. Sometimes work is slow and I post more often, and other times work is busy and I post less frequently. Now how is that stupid?

>> I don't suppose you have ever heard of the Anasazi....
>>
>That was then... this is now. You mean to tell me you are going to be a

I said nothing of the sort. Don't read your opinions into my statments.

> How about something more
>previous in history... have you ever heard of "BUCKWHEAT" ?<snicker>

Apparenly not, since I don't get the joke.

>> RASTA, the Keyclown Psychic.
>>
>No. Just a RASTA... we tell the truth.
>
>
>> > have a good day.
>>
>> I usually do.
>>
>When you do have a nice day, you usually shoot that shit down by coming here
>and getting your blood-pressure up. What is this about you drinking now?

It's another of Twisty's rumors. He enjoys accusing people of things he thinks can't be disproven in the newsgroup. He has also accused me of being five different hammies and I'm not even a ham. So give it as much weight as you feel is justified.

>But really, have a good one.

Like I said, I usually do.

> TEXAS STAR 350V $130
> MACO 75 TWO TUBER (RARE) $180
> BLACK CAT JB-76B AMP $140
> BLACK CAT TUBE MOBILE AMP $60

FCC rule 2.815(b): After APR 27, 1978, no person shall manufacture, sell or lease, offer for sale or lease (including advertising for sale or lease), or import, ship, or distribute for the purpose of selling or leasing or offering for sale or lease, any external radio frequency amplifier or amplifier kit capable of operation on any frequency or frequencies between 24 and 35 MHz.

> RCI 295 $150
> HR 2510 $150

In a May 13 Public Notice, the FCC points out that it's a violation of FCC regulations to import or market a transmitter designed or intended to operate outside the amateur bands unless the equipment has been issued a grant of equipment authorization for the radio services it's capable of operating. The FCC says it wanted to clarify its rules on equipment that's "intended to operate in various radio services in the high frequency radio spectrum, including '10-meter' Amateur Radio Service (ARS) equipment." The notice--directed to "manufacturers, importers, vendors and users of these transceivers"--emphasizes that transmitters intended for use by FCC-authorized radio services except the Amateur Radio Service must be type-accepted.

Smoke city. It takes a helical antenna to radiate circular polarization. Those fiberglass CB antennas are called 'helical' only because of how they are made, not because they radiate circular polarization (which they don't). Want to see a true helical antenna?

http://www.cc.edu/physics/radtel01.html

That's 30 inches long for 2400 MHz -- now can you imagine the size of a helical for 27 MHz?

The Jo Gunn antenna you cited is called a V-yagi, and is just another variation of the basic yagi design. Assuming it is mounted horizontally, it's polarity is horizontal, not circular.

Here's a couple more links on antennas that I should have posted first:

You brought that upon yourself, Franklin. When you and your counterparts started flaming this NG bigtime in '99, it got way out of control. When control is lost, then you have CHAOS. And that is the fruits that the AKC beared. There was no one else to blame but the AKC. Sorry man, that's the truth.

>
Whatever. But let me clarify something...

My original post was for what I saw and read. I did not post my original message to attack you at all, Franklin. That was not my intentions. You made it your business to reply to my post. Now if it was someone else from your AKC Organization, then I would've responded to their post. Don't take this as personal as you think it is-because it is not. I just merely posted the truth.

Anyway, go ahead and have a good one. This one is on me... free of charge. REALLY...

  Right here in the 'pile...an 'ol boy hammie was funnin' (?) around
and jamming a repeater on 146.790 mhz,,,,,Feds told him he must "take
immediate action" to make certain the database (which is public
knowledge) contain his address where he reside, and not merely a contact
address as he provided. Some hammies are sticklers for the rules. Some
go to harassment levels, as seen by several hammie-lids and
self-professed "AKCers" who come here to harass cbers

>Not CBers, Twist: Illegal operators.

You lie. You and your ilk have accused cbers and hammies alike of being
illegal or catering to illegals merely because of their topics. You most
certainly have expressed your venom, and indeed, harassed legal, law
abiding operators for their topic of choice. You most indeed have
attacked and harassed those for responding to a post you feel should be
censored, merely because the content may offer informational
instructions that when actually employed may break the law pertaining to
cb or amps. Since you can not handle such adult topics with proper
communicative technique, you should ignore that of which offends you
instead of attacking the character of one who asks a question about a
linear.

>Blah, blah, blah. Same old Twistedhed

>diatribe.

And it's all true,,every word of it, Frankie-lite.. It's how you are
viewed.

>Only in your twisted little mind, Twisty.

No Frankie-lite,,in the minds of all present that you have needlessly attacked.
Denial isn't a river in the Nile, old boy. This,,,is your life, Frankie-lite....

>Hmmm... I thought you were going to quote

>my post where I say that it is my "MORAL duty
>and obligation to needlessly harass cbers".

That's one way of attempting to get the light off your past harassment of those who speak of topics that dicombobulate you, such as amps and mods.

_
Illustrating how weak you are in thought.

>Well?

Well what? I said "may", It's there,..oh, what the hell....since you;re drunk as a sailor, here ya' go, Frankie-lite...you wrote:

>It is my legal right, moral responsibility, and

>independant choice to enforce any law I see fit

>to enforce.

>It is. Now where do I say that it is my "MORAL
>duty

LOL...not even a decent stab..LOL.."Duty" and "responsibility" can, and often do, share the same definition. Run, run, run, Frankie lite, run like the wind to your semantic focuses...you are being forced to face your own behavior, so run, Frankie-lite, run to the land of enchanted semantics.

>and obligation to needlessly harass cbers"?

You claim it is your right to enforce any law "you" see fit. Wrong. You are not a law enforcement officer and the law strongly discourages vigilantism.

>Vigilantism isn't necessary to enforce a law;

No, it's not, but in your case, thats exactly what it amounts to. A perfect example is your calling another a criminal because of their topic of choice.

>all that is required is an active role in the

>enforcement process.

Yes, Frankie-lite,,active, not REactive. Practice what you preach. You do nothing but REact.

>And BTW, vigilantism is contrary to the entire

>system of justice we have, as it violates the

>rights of the accused,

You have wrongly accused many of being "criminals" because of their topic of choice, your ignorance and myopic view.

>and is even expressly forbidden in statutory

>law in some local jurisdictions.

You claim it is your "moral" responsibility. Imposing your interpretation of morality constitutes the harassment of those that do not share your views,

>...or your "beliefs"...

You can name not one person who feels I have "imposed" my belief upon them,,LOL. If somehow, Frankie-lite, you feel I have "imposed" my "belief" upon your fragile psyche, your feelings of self-worth are even worse than initially thought.
But back to your denial.......you do NOT have the right to enforce any law you see fit, if you so wish, I can fill your tiny mind with a myriad of examples where you do not have the right to "enforce any law you see fit". And you most certainly do not have the right to judge another and impose what constitutes your vision of morality upon them. Ironic how you claim such a right cocnerning morality, yet reduce yourself to foul language, obscenities, lies, repeated name-calling, and who knows how many other angry outbursts and insults.

_
Frankie-lite, you can define "harassment' in any manner you choose,,for your examples, I point to the countless attacks you have made, unprovoked, the countless names you have called people, unprovoked, the continual badgering of those who hold you and your views impotent, and the misdirected anger and personal attacks of those who ask a question of a linear or mod. You are not the moderator and it kills you that you can not censor such speech. You have illustrated your frustration level many times, once by placing a call-to-arms for a "legal" cb only discussion group. Not only did you receive no takers, you were laughed away. Receiving no takers, and failing at censoring and intimidating those that speak of subjects that render you a quivering mass of jello, you resort to what you are about and that of wich you know best,,,,,the above mentioned behavior and what can most certainly be construed as.......harassing behavior...IE: harassment. Note all your posts are directed at others, most recently myself, but rarely does anyone give you the time of day unless you act out,,,its what childen do when they wish to receieve attention but do not understand how to go about it,,,,they react negatively. Yet another beaming illustration of the communication deficit that ails you and keeps you down.

>Pot, kettle, black.

I don't act out Frankie-lite, Not one person present has ever claimed I needlessly attacked them, unlike yourself, save for the swine jewels of

the voob's naming. Not one, Frankie.
Now, back to forcing you to do the introspection, many can claim you have needlessly attacked them, Frankie,,,,the "pot-kettle-black" was but a mere autonomous canned response from you, akin to nervous laughter. There is absolutely nothing else you can say concerning the above mentioned behavior perpetuated by yourself upon this group.....nothing. THIS..is your life, Frankie-lite.

_
>Which begs another question: If I'm harassing

>CBers, and I happen to be a CBer myself,

>then I must be harassing myself;

Nah. The term for what you do to yourself is "self-masochism".

>LOL! Is that the opposite of "self-sadism", or is
>it a type of "para-masochism"?

LOL..no, it's a type of algolagnia..IE: one who receives pleasure or sexual gratification, dependent upon suffering, physical pain and humiliation. You have indeed demonstrated you derive such pleasure from self-abuse. This is sort of the manner KC8LDO Lelnad derives his stated pleasures from "messing" with cbers. Kapish, Frankie-lite?

>Dunce.

Oooh!

>isn't that a conflict of interest, Trog?

LOL,,I'll be anyone you want me to be, Frankie-lite, if it pleases you. I told you that once before,,try to retain it this time.

_
Add to that, Frankie-lite,,your admitted lying against all you equate and ignorantly misconstrue as illegal,

>Who do you believe me to be THIS week,

>Trog?

LOL.....how about "Roger from WV?"..haha! Foghorn, Mr. K? LOL!

>Freebanding isn't illegal?

>Using an amp with a CB isn't illegal? What

>country do YOU live in, Trog? Cuba?

Banality.

>HAHAHAHAHA!!! Why yes you do, Trog!!! It's

>most definately common knowledge that you

>are an anonymous, whiny, obsessed, bitter

>little freebanding troll with a warped sense of

>values and no sense of logic! ROTFLMAO!!!

Bitter? I'm not bitter at anyone, Frankie-lite. I must admit, however, after your repeated flaccid attempts at personal character assassination,
I take a sublime but guilty pleasure in watching you self-destruct and go insane.
Do your self a favor to save yourself future embarrassment like you have demonstrated in this post,,,,,,,,, look up the word "banality". Once you have looked up the definition, you may then be so kind as to return it to it's proper context....you know, where it was a retort to your unorginal insult that you snipped in your reply. That man in the mirror is getting more stubborn with you day by day, eh, Frankie-lite? He feels he can make what he doesn't like, go away merely by sticking his head in the sand,,,pretending it doesn't exist,,,,,the ostrich-syndrome,,,,,no wonder you snip like a mad barber..you really hate being forced to reconcile with yourself...LOL.

_
This is not all you misconstrued as illegal....

><snip>

LOL.

>Get a life.

Ah,,futile attempts at humor...lest you forget, Frankie-lite,,,'tis you that is in wait for my posts,,,'tis you on the "attack", Frankie-lite,,'tis you that initiates the maleficence, name calling, insults, lies, etc....twas no one but yourself, Frankie-lite, that is unhappy with their life. I'm quite content, and for reasons unkonown to all but those suffering severe communication deficits, your STATED goal (along with Lelnads) has been one of intended malice toward myself. Do you need to see that old post, too, Frankie-lite?

><*-plonk-*>

LOL..that forced introspection caused you to see what you dislike in the man in the mirror, eh, Frankie-lite? You came gunning for me over a grammatical error YOU made. You direct your daily posts toward myself and have for several weeks,,I happily respond. You get personal and insultive in all your directed posts toward myself. YOU "begged" my attention so bad you took to initiating the installation of my quotes as a sig,(and I thank you). I merely returned the act,,,,,yet you misinterpret the returns and responses as "begging" for your attention.,,,introspection really upsets you Frankie, but you too can get by this with AA and by practicing the golden rule. In this manner, you won't be trashing yourself nearly as much as you do now.....Drinking and posting has nicely illuminated your actions, despite your continued pleads of "Believe what I say, not what I DO".....LOL.

==========
LOL...beg for your attention? That's rich, Frankie-lite. Think anyone
believes you? Care to name him? <g>
Permit me to remind you, twas you that initiated these posts,,,,twas you
directing your misdirected anger and incompetence my way. Twas you that
initiated the quoting and homage of me in your sig, It's always you,
Frankie-lite,,,you and the other losers named by the voob..LOL.I was
sitting here minding my own business when you came gunning for me over a
Latin rule you proved you knew nothing about when it came to it's
translation to English. That you can't comprehend a sentence can indeed
end with a preposition, has for some odd reason caused you mini-strokes,
or one would so gather. An email I had in my mailbox over the weekend
claimed you were part of the mail2news sissies that recently got
slammed, and that's why you're so angry. In a nutshell, each time you
lose a pseudo-anonymous access to the group, you become problematic and
on the unprovoked attack..LOL.
It's always a personal problem that causes you to go wild,
Frankie-lite.....you just haven't acquired the balls needed to face
yourself in the mirror at the end of the day and see yourself as you
really are..your ego is too heavily involved and will not permit
it,,,hence, you are relegated to a lifetime of self-abuse, hatred, and
misery. And twisted cb.

>nope.

Ok,,so you didn't realize you were had,,,you do now. Tell me something Eric, what is your position on hammies that reduce themselves to forging cbers? How about those hammies who receieve a warped but admitted pleasure in failed attempts at "messing" with people?

>who is forging cb'ers?

One question at a time, and in order, Mr. Oyen,,you do practice common courtesy, or do you, Mr. Oyen?

>you have to admit, you've done your fair share

>of forging around here. me,

LOL..I must admit nothing an unprovoked accuser like you claims to be true, especially when it isn't and you have an agenda but do,try and remain relevant.

>I don't have time for it.

Ahh....But making such an accusation shows different than what you profess your behavior to be... you most certainly have time for concern of such, as your acts have shown...

>I simply posted a response to that group as it

>didn't seem relivant to anywhere else

Ahh,,,but your initial response WAS relevant yeah?

>and your point?

That you reacted to a forge. That when your attention was called to it, you became belligerent, defensive, and accusatory for no reason...almost as if we had crossed once before..LOL.

>(whats the matter,

:),,,nothing like a snip when it illustrates something you wish to ignore..but to answer your question,,,,
Nothing at all,,,I merely wish your input on such behavior of hammies since you removed yourself from the topic,

>my input? hehehehe since when is anyone

>here going to take my input seriously?

I give everyone the benefit of doubt.,tell me, Mr. Oyen, why do angry hammies all think so little of their input? The "ego" thing and low self-esteem??

> thinking too much for you or

>have you lost your common sense?)

Hmmm,,I see, not only are you another hammie who doesn't practice the hammie creed, you rush to join the lids of this forum and make your posts of a personal nature and that of the poster instead of the message or content (sigh),,well, ok,,since you insist....,,one can always acquire "common sense".....,,,but at your age, still spelling the way you do speaks volumes about which one of us may possess such sense you speak of.

>*sigh*. well, you just proved my point...

If only you had a clue.

_
This is not a USA-only forum,,the FCC has no jurisdiction over the rest of the world. Arrogance that some Americans possess is illustrated by yourself by the feeling that the entire world revolves around them and their "rules."

>where is the newsgroup charter then? does it

>stipulate that this group is strictly

>international?

Non-sequitor.

_
>can you explain why more than just a simple

>majority of this

>group originates in the US.

>generally from the US?

I could, (income per capita, average American wage, access to bigger, better, cheaper,and more powerful computers and networks,, american popularity of cb etc., etc.) but you probably would have a problem with it, strain yourself in the process, and it means nothing in the context of usenet. Failed attempts at obfuscation concerning usage doesn't change the fact that the forum is worldwide and not exclusive to the US.

_
>read on your part "Failed attempts as

>obfuscation..." you're playing an old game and
>its time for you to put it up and start talking like
>you really mean it. besides, all that other

>mumbo-jumbo you

>mentioned in this paragraph has nothing much
>to do with this group, now does it?

Great point. They were responses to your initated claims. YOUR selected
topics.

_
LOL,,,Gee,,,it also doesn't say "Freeband is not part of cb".......how
absurd, Eric. One can see that you really wish to apply your non-logic
across the board, but you are unable to pigeonhole. Once again this
forum is not limited to the US, despite the mythical figures you pulled
from your ass and tossed about as fact.

>no. it doesn't mention freebanding. but then,

>you have decided to difress from the topic at

>hand and have introduced a lot of extraneous

>information ot relivant to the discussion at

>hand.....

Wrong, Eric,,,,you chose to utilize and introduce a poorly constructed
analogy, not I. At least be honest in your accusations, Mr. Oyen, or are
you also a lid who lies?

_
In addition, Frankiestein, (in what is becoming a familar scenario) had
an imbecile-like moment
which he claimed integrity in a cb forum is equated with identification.
It doesn't claim anything of the sort in the name of the group, does it,
Eric? Absurd.

>are you trying to make a point here, or just

>running on?

Merely,,that your analogy was invalid.

>besides, you sound just as arrogant as the

>rest of us

How drool. Please enlighten the world with your reference to the word
"us"? Who else would you consider so pious that they readily admit to
sharing the arrogance on display by yourself?

>better break out that dictionary bud.....

Why,,you gonna mis-spell again for us and embarrass yourself yet again?

>its "How Drole!"

Yup, you certainly are. Well, who am I to argue with one who has proven himself so
astutely...LOL. Check it out: Drool: To salivate, to water at the mouth...another
definition: To talk foolishly, IE; Foolish talk. Application, context, and both definitions applied to my utilization of the word. Now it applies to you as well..

>as for "us": I mean the collective that is the

>american public.

I assure you, Mr. Oyen, you are in no way representative of the "collective American Public".

>.and most of them won't admit publically

>(mostly out of pride).

Your pals "Frank" and Davie Hall and WA3MOJsay people won't admit things out of fear. You're really decimating their arguments with ease..

>Besides, with this "pseudo-intellectual crap"

>you've been spilling, all you are doing is

>proving just how foolish you really are.

I'm not the one responding to forges and getting angry and initiating insults when told of such goofs,,,you are.

>you might as well stop while you are ahead (if

>that is even possible for the likes of you).

The mark of a true lid,,,,redundant and ever-present need for condescension. Who is responsible for your entrance to hammie radio, Eric?

>I suspect you are probably a

>US citizen in any case).

And this is of concern to yourself why?

>who said it was a concern to me?

It certainly was concern enough for you to become bothered enough to try and justify such boorish behavior. Twas you that chose the word "suspect", yet you claim no concern? Hokayyyyy!

>just making an observation.

As was I.

>no need to get all defensive about it....

LOL...you're the one dodging the question directed at your claim.

> hmmmmmm. struck a nerve I have, it seems.

Well, whatever you feel you have "struck", I suggest you have it looked at,,,it's contributing to your rapid decline and decay as a hammie.

_
No, it doesn't apply to any frequency down to 12 meter. Many of those frequencies are abandoned and not in use. Again, your claim holds only slight merit when referring to the US,,this forum is worldwide and so is cb. These "commercial" interests you speak of, IF they are to be found and IF they were to be interfered with, have no recourse against any ops outside the US and there exist plenty of those...

>say that again?

Now I know why so many challenged hammies that suffer communication deficits visit rec.radio.cb, Eric..to learn what you haven't..

>heh. well, before I was a ham, I used to be an

>avid CB'er.

In Phoenix? And you claimed no illegal interference you are aware of,,,,contradicting your pals again, Eric,,not good,,,not good.

>However, if you are puttingyourself up as the

>best example of what a cb'er is, then we

>should just do away with 11 meters

>altogether....

Oh, no, Mr. Oyen, those were your words about me. I am no ones mother. Never claimed to be. But suppose I were claiming such........, your approach of tossing the baby with the bathwater is not only illustrative of your intellect, but indicative of your self-professed representation of the "collective-public-at-large". Coupled with the fact that this was never about ME until you attempted to make it so when I alerted you to your response to a forge, and it appears as your response may have been slightly canned and angry for no reason. You appear to have an agenda, Mr. Oyen, and it is dangerous to each both hobby radio services.

>I know for a fact that those channels below

>26965 are still in use in many areas of the

>country. wlwg 700 cincinnatti still uses FM

>remote pickups down there in the 26.210

>regime (I pick them up fairly often on the

>shortwave and have to slope detect them

>because they are narrowband FM).

>abandoned?

Yea,,there are several remote pickups for broadcast stations. Do you even know what a remote broadcast is for Eric,,what it entails,,why it exists at such frequencies? I also know for a "fact" that very few of these frequencies are still in use. I didn't say they were ALL abandoned, I said the majority are absent of use, void of action,,,in other words,,most are abandoned. Technology has rendered most of these freqs useless for businesses..you can always find an exception to cite, Eric, but the fact remains, the majority are abandoned and not in use by their authorized users.

>gee, if you have to ask, them make a

>statement, it seems you are trying to answer

>your own questions....

>BTW, I know exactly what a remote/mobile

>station is. I operated one for a time when I

>worked for a local radio station (part time).

(rolls eyes) Then you know cb/freebanding is of minimal concern to these stations. The FCC database concerning complaints of this nature ascertains my position and effectively nullifies your own.

> that isn't what the fcc frequency database has
>to say.

I'd advise against becoming a "sheople" but apparently I may be too late...if the FCC or federal government claims it, then it must be true, Nevermind ascertaining, thinking for yourself.......believe what you are told and everything you read, especially from the government.

> sheople?

Yes,,sheople.

>geez! man. now I know you are full of it.

><snip>

Let's review the chain of events, shall we, Mr. Oyen? You responded to a forge, were informed of such by myself, and suddenly initiated flames and insults, and off-topic rants directed toward myself...a very familiar pattern, Eric, with the trouble-causing lids among us,,it is of little surprise Davie boy fluttered in to add his two cents to your non-dialog.........congratulations,,you have managed to fall in to their vat of hate and discontent and reduce yourself to their level....can't say you haven't worked hard for it this past week...indeed you have. Enjoy.

>beyond here, it has become filled with

>irrelivancies, non-sequitor arguements and

>supposition.

Follow-ups to your tripe, illustrating your iniated malice. There are no "suppositions" ,Eric,,,,,,,,you merely do not like the response so you do what comes natural,,,,hide and pretend such doesn't exist..

>in your claims, not worth trying to argue with a

>half wit.

The mark of a true lid,,the redundant and ever-present need for personal insult of another..yet, I imagine the pain is greatest when the half-wit manages to illustrate your incompetence and unprovoked malice.

>forget it man. you just ceased being worth my

>time.

S'cool by me,,,but your claims are still bogus and bullshit and making all your posts personal, insultive, and about me won't change that fact one iota.
To wit:
Now we have you hedging, doing the Gillinad Frankiestein-flop,,you are practically reversing your earlier position and claim of these freqs being used, to agreeing with myself that they may not be in wide use, but are still protected. You are coming along but still have some learning to do concerning this issue, grasshoppah. They are not protected. There is none monitoring these frequencies to offer this "protection" you speak of. Any "protection" amounts to a response (usually a letter of inquiry or warning) via a complaint to the FCC. A sneak peak at all the hammies getting popped (who were turned in by other hammies via COMPLAINTS) illustrates how these scenarios are dealt with.... I wouldn't refer to such action as protection, but you may.

–

>the rules are clear,

And there we have what is causing you such straining, in all it's reflected glory,,,,having a cat over the rules which you have no control over,,you may wish to ring up a friendship with Dave (the Hypocrite) Hall...he shares your pain, only he brings with him years of illegal cb and high power operation....do you bring the same virtues to bestow upon us lowly cbers, Eric?
You definitely have an ax to grind with me, and it seems odd it would result merely from my informing you of a simple mistake you made,,,...yet, you have managed to take your simple mistake and transform it into a public self-embarrassment of monumental proportions, along with the acquired (and much needed) humiliation.

–
>unless you have a license

>to operate in the section from 27.405 - 28.000

>(which I KNOW for a fact no one here does),

>you open yourself up to litigation from the

>FCC,

Or lipservice from those not unlike yourself that have power issues and issues of incompetence and the need for control over something in their mundane lives, no matter how trivial..

>any commercial concern that may have

>operating privileges there or even the military

>(which does have some allocated spectrum

>there) this applies also for any frequency

>below 26.965 clear down to 12 meters (mostly
>commercial and marine band HF stuff).

>you don't have the letter from the FCC saying

>you can operate there, its the same as not

>having a license to drive a car on any street in

>america (radio operations are a privilege, not

>a right and onyone spouting otherwise really

>doesn't know what they are talking about).

No, it's not the same at all,,you are comparing apples and tomatoes,,one has the possibility and probability to maim, injure and even kill when operated in a reckless and dangerous manner,,,,,,,,spouting otherwise when one really doesn't know what they are talking of is a two way street, Mr. Oyen.

>excuse me, what to vegetables/fruits have to

>really do with the application of rules and

>regulations with regard to operation of a

>station IN THE US?

LOL...it was your claim.I merely paraphrased you..hahahahahah..you drink, too, Mr. Oyen? No wonder you and "frankie-lite" get along..Twas a figure of speech,,,,you were attempting to compare two presentations that have nothing to do with each other. Often, when one makes such embarrassing gaffes, the phrase "apples and oranges" are used to denote the absurdness of the claim,,I took the liberty of plagiarizing one of our forum-frequent visitors (wasn't it yourself?) fave saying of "apples and tomatoes". Kapish? Now, once again, claiming one doesn't know what they are talking about, Mr. Eric Oyen,when it was yourself attempting to compare a rather benign act (freebanding) with the act of

driving an automobile in a reckless manner, which has a great
possibility and probability to kill or maim, begs the repeating of:
spouting otherwise when one really doesn't know what they are talking of
is a two way street, Mr. Oyen.

>if you didn't get my meaning that time, then

>you need to reread the originating statement

>that lead me to ask why a comparison of

>apples and tomatoes was relivant (let alone

>apples and oranges which are both fruits).

A tomatoe is also a fruit. In the first place, your "meaning" was
nothing but a failed attempted snip of something you wished not to
acknowledge,,the illustration of your poor comparison of a rather benign
act (freebanding) to one that has the probabilty to kill and maim when
operated in a reckless manner (an auto). Claiming one who fails to
share the exact myopic view and manner you profess does not equate that
one "doesn't know what they are talking about."
In the second place, I wasn't the one asking another to repeat themself
(as is often indicative of a communication deficit),,you were, Mr. Oyen.

>this point is moot anyway.

Agreed,,stop harping on semantics that you brought up and do try to
acknowledge that freebanding is nothing like "operating a car in a
reckless manner." It's not that I care, per se, it's just that it's so
blatantly and patently incorrect, it's almost offensive to the
readership that you would expect another to buy into such a mindset you
have created. I point these things out, ya' know,,whcih is why I am
designated a dangeroous individual to those who wish to curb freedoms,
such as Dave (the Hypocrite) Hall, WA3MOJ, Frank Gillinad, N8WWM, adn
KC8LDO, You are rapidly declining to their status, Mr. Oyen. I suggest
reassess your objective, lest you be reduced to tossing tiny pebbles
from the shadows like the pseudo-anonymous attempts of Dave and Lelnad.

_
If you want to show me where in the FCC
rules it governs foreign stations, be my guest.

>Why don't you check the treaties that the US

>has with many other countries (its all in the

>ITU rules).

There is absolutely nothing in the ITU that concerns the FCC governing
any foreign stations. Period.

>why do you think that most places have similar
>allocations of space on the HF bands?

MOST places? Gee, Eric, you really are clueless on this freeband issue, as are those that feel the need to make a post personal due to a massive defect in effective communicative technique. "MOST" places have no method of dealing with what you speak,,,the majority of smaller countries and locales across the planet certainly do not have allocations for space on the "HF" band, Eric...they don't give a rat's ass about American hammies,,as matter of fact, most Americans don't give a rat's ass about hammies or cbers.,,,this doesn't sit well with certain hammies who fail at attempting to demand respect simply by virtue of licensure.
They act out their feelings iby attacking others merely because they are befuddled and cornfused about how to properly express themselves and it angers them. Again, you appear to be on your way to the dwelling with the sub-hammies,,,,,is this what the amateur creed represents, Mr, Oyen? Are you also a member of hammie organizations? Or are you merely a lone trouble-maker, like the lids in this group who have been outcast by hammies due their nature, and by default, cling to each other like dying desperados at the end of a cheap western.

_
>The FCC is strictly a US agency and thats

>where I was addressing my comments.

But usenet is world-wide. You may have "intended" such, but you were addressing your comments to the world, as if they somehow applied.

_
Ahh,,another hammie with a power-hungry jones that needs to tell others what to do in order to feel better about himself. Stick to hammie radio, better yourself, and clean your own backyard prior to attempting another how to operate.

>gee, you put a lot of spin on that one.

MR. Oyen,,In the context in which you deliberately removed it from and re-presented it, one may actually believe such bullshit,,,but it was in response to the rude comment YOU made and quickly snipped:

> otherwise, stick to 11 meters (the class D

>channels if you please) or get your ticket

>(amateur radio) and rgchew with a bunch of us
>on bands you only dreamed of operating.

It isn't spin at all when presented in it's original context that for some reason, you went out of your way to snip and eliminate. And speaking of spin, you actually introduced what you refer "spin" when you made your initial comment concerning myself, which you know nothing of. Add to that your selective snipping, and your "spin" is quite noticeable. Are you another hypocrite, eric, that cries like Frankiestein when he gets back what he dishes out to others?

>perhaps we should take this up on the O'reilly

>factor?

I can certainly understand your willingness to drop it here and now, Mr. Oyen.

_
That explains it,,...555 is locked up in Phoenix and is free-for-all... Perhaps the fact that all that lawlessness on 555 in your own back yard that has been going on for years has angered you to the point of no return,,no wonder you have a hard-on for freebanders. Buy a better radio, prehaps something with better rejection, perhaps a beam,,or maybe, give it up altogether if it makes you so upset,,a hobby is suppoosed to be enjoying and relaxing,,yet, you seem to fit the stereotypical mold of a lid harassing all that he fails to comprehend. Trust me, the majority of those in here want nothing to do with these "dream" frequencies you speak of,

>if you are the example of what to expect.

>small problem with that. I don;t have any

>equipment to go there,

Yes, you seem to become angry and insultive to strangers that you have never communicated with before for no apparent reason. Communication deficits are what you have in common with Davie and Frankie-lite.
So what equipment do you run, Eric?

>so how would I know

>thats its strictly a problem in my back yard?

Gee Eric, you just effectively ruined Frankiestein's, WA3MOJ's, KC8LDO's, n8wwm's, and Dave Hall's argument that those nasty illegal freebanders continually interfere something awful with legal amateur services,,,,it's a known fact that Phoenix is about the most lawless radio town in the country for freeband,,,big power coming out of Phoenix on 555 for years on end and you experience nothing.,,nada,,why, you claim you're not even aware of any problems,....LOL

>I only have your word on it,

No, you have the word of the above mentioned lids, but as they are confirmed liars and not one managed to maintain an original email address from any length of time,,I share your skepticism.

>and so far, you

This isn't about me, as much as you may wish to make it and need it to be..... Cling, Mr. Oyen, cling to those lids who are actively circling your hammie status and adding to your rapid decline. Cling to tthose who have already left their black mark on hammie radio and prefer to pull you down. Failure and misery love company.

>haven't exactly proven yourself to be

>trustworthy, now have you?

It's not about me, Mr. Oyen, and your repeated and redundant insistences that your topics be about me are illustrative of your problem, no one elses...well, maye Frankie-lites and Lelands and davie....and geogre,,,all the swine jewels named by the voob,,in addition to yourself, from what I see so far.....
Addressing your inquiry, to which conversation we had in the past do you attribute such claims, or are you merely advancing your sheople status in keeping with the angry minority lid group among us? But in keeping with addressing your inquiries, such as "how do I know it's a problem in my back yard?",,,well, Mr, Oyen,,YOU wrote.... sir, and I quote:

>freebanding is NOT a hobby.

>its a deliberate and amlicious violation of

>federal rules and regulations (those being

>policy, and thus according to the US supreme

>court, have the affact and power of law). you

>want to attract attention, fine. just don't try to

>take others with you when you go down.

Once again,,in the first place,..addressing your claim of "How do I know it's a problem in my backyard?" Well, who were you professing to be speaking for in the above, Mr. Oyen? Someone elses backyard? LOL! And despite your refusal to acknowledge the existence of something merely because your myopic scope prevents you from agreeing with such, freebanding is indeed a hobby. Merely because aspects of it may be illegal in the US does not make it any less a hobby. Misconstruing a post about freebanding as an attempt to "take others down" illustrates the gravity of your maleficence, intended or ignorant.

>DE N7ZZT

>Phoenix, Arizona

Indeed you are, sir, indeed you are.

Anyone use this antenna?

I know it's discontinued. I found one in a clearout section for $9.95 Canadian.

I am interested in it because of its wide bandwidth. Does anyone have experience with it?

What kind of bandwidth can I expect.

I am planning to replace my Valor Half-Breed with it.

Thanks,
Steve

>Can you name a country or countries where unlicensed 11 meter DX
>hobby-type operation is specifically authorized?

No. I doubt there is one.

Can you name a country where people are "specifically authorized" to wear a blue shirt with green pants? I doubt there is one.

The fact that it is not "specifically authorized" does not mean it is not permitted. In most of the world, anything which is not forbidden, is permitted. Unless it is "specifically FORBIDDEN", I may play catch with my son, go for long walks on the beach, DX on 11 meters, use a power drill and wear a blue shirt with green pants.

> .....As far as I know,
>international treaty does not permit unlicensed "HF DX" radio
>services.

I believe you are correct. With almost all international treaties, there are a number of countries which don't sign on. Worldwide agreement is extremely rare. I have seen no evidence to suggest that EVERY county in the world has signed on to the ITU (or other) international agreements regarding unlicensed radio operation.

And the car is a ground plane. Make your own by taking
a coffee can lid, and soldering four 8.5 foot wires at
right angles and stretch them out on the roof with the
Wilson on top. Wa-La! Instant artificial car.

This works MUCH better then a 39 inch dummy load.

>As far as his contributions to the group goes, it's like yours and your
>compadres rants. Does nothing for this group.

Then why don't you post a rant about him?

>> Actually, now that I think about it, an unofficial "Amber Alert Channel"
>isn't
>> such a bad idea. After all, the broadcasting of emergency information and
>road
>> conditions is allowed. I think I'll send an email off to the FCC to see if
>it's
>> legal to broadcast Amber Alert information.
>>
>THERE YOU GO! Something positive for all CBer's (in your parts) can use.
>Heck, I might do the same here.

It really isn't a bad idea at all. I was thinking that Ch. 10 might be good because it's right next to Ch. 9 (keeping that channel open), but on the side away from Ch. 6 so it won't pick up as much splatter. Ch. 10 could carry short broadcasts at timed intervals to provide descriptions and contact information, and brief notifications of the broadcast can be made on Ch. 19. The broadcasts could be made by CBers who volunteer for the job in cooperation with their local law enforcement, such as through the C.O.P.S. program (Community Oriented Policing Services). You could also look into getting the broadcasts protected as emergency transmissions.

<snip>
>You brought that upon yourself, Franklin. When you and your counterparts
>started flaming this NG bigtime in '99, it got way out of control. When
>control is lost, then you have CHAOS. And that is the fruits that the AKC
>beared. There was no one else to blame but the AKC. Sorry man, that's the
>truth.

Remember that it was THEIR choice to escalate it into a level of harassment that was clearly illegal. If a woman wears provocative clothing, is it her fault if she gets raped? From a different angle, if a drunk driver gets busted, is it the cops fault that the person lands in jail? Why do some people always have to find someone else to blame for their own behavior? If you are chastizing me because they behave poorly then you need to get a new perspective. And don't EVEN come down on ME for speaking out against illegal operators because it is THEIR fault that the CB is in a state of chaos. Again, put the blame where it belongs.

>> You want to talk about stupid? I worked most of my life in radio, spent
>five
>> years earning my degree, work full-time as a BE and part-time in my own
>shop
>> (and it ain't a CB radio shop). I spend a lot of time on the computer
>because
>> it's a major part of what I do for a career. Sometimes work is slow and I
>post
>> more often, and other times work is busy and I post less frequently. Now
>how is
>> that stupid?
>>
>That is your problem. I don't see anything here that directly affects your
>'career'. What's wrong with that? Nor do I see anyone here affecting your
>business.

That's because I don't do business over the internet anymore. And I never said that anything in the newsgroup affects my career, just that I spend a lot of time on the computer. I also access the internet through my computer. See the relationship?

> Coming here during business hours and flaming kids from Florida
>IS stupid.

Kids? You mean Twisty? How is he a 'kid' if he claims to be a professional journalist with a wife and kid of his own? And why is flaming him stupid?

>> I said nothing of the sort. Don't read your opinions into my statments.
>>
>Explain then...

From the beginning: You said people don't die, they just multiply. I responded with a mention of the Anasazi (a lost civilization), and you came back with "You mean to tell me you are going to be a cultural influence and change things over night?" If you want an explanation then figure out why you responded with such an irrelevant question. Regardless, I never said that I was going to change things "over night".

>> > How about something more
>> >previous in history... have you ever heard of "BUCKWHEAT" ?<snicker>
>>
>> Apparenly not, since I don't get the joke.
>>
>Obviously...

Then why don't you explain it?

>> It's another of Twisty's rumors. He enjoys accusing people of things he
>thinks
>> can't be disproven in the newsgroup. He has also accused me of being five
>> different hammies and I'm not even a ham. So give it as much weight as you
>feel
>> is justified.
>>
>> >But really, have a good one.
>>
>> Like I said, I usually do.
>>
> Whatever. But let me clarify something...
>
>My original post was for what I saw and read. I did not post my original
>message to attack you at all, Franklin. That was not my intentions.

Check this out: "With the rants of Leland, Doug, Frank, George, Ric and Dave, it ain't doing no good for these guys." Now if you weren't referring to me, then who?

> You
>made it your business to reply to my post.

Wrong. Your post was directed at me (among others), and you even included my name. YOU made it my business.

> Now if it was someone else from
>your AKC Organization, then I would've responded to their post. Don't take
>this as personal as you think it is-because it is not. I just merely posted
>the truth.

You posted your opinion. Seems like you and Twisty have the same problem of being unable to differentiate opinion from truth. If you disagree, then maybe you should explain a few things, beginning with why your claim that I have posted everyday for the past three years is the truth.

>Anyway, go ahead and have a good one. This one is on me... free of charge.
>REALLY...

No need for you to pick up the tab, I'm perfectly capable of having a fine day on my own. And I usually do.

Sure you did, Frankie-lite,,you claimed illegal cbers, ("RF Pirates") affect you directly in your work...and you reiterate how prolific such illegalities are here in his ng...in fact, you really don't know what you mean, this is but another example.

"I never said I wouldn't troll anymore."..Frank Gilliland (Sparky@NOSPAMaimmcom.net)"

"I do not get upset about any CB law being broken."...Frank Gilliland (Sparky@cet.com)

"I choose to take a stand against illegal operators for several reasons"....Frank Gilliland (Sparky@cet.com)

"RF pirates affect me directly in my work."...Frank Gilliland (Sparky@cet.com)

"I have admitted to lying in this newsgroup, and on more than one occasion."......Frank Gilliland <sparky@NOSPAMaimcomm.net>

894. Computer and CB Trolls....

Newsgroup: rec.radio.cb
Date: 2003-07-14 18:04:19 UTC
From: Jos <josuha15@yaho.com>
Message-ID: <vh5rh2jm2ke60@corp.supernews.com>
Source record: 162427

After reading some threads on this group (among others on other groups) and listening to radio for years there was a simarlarity to "trolls' on NG's and people you hear on the radio. (CB, Ham etc..)
I think we have all read their posts or heard them on the CB radio.
On the CB or ham radio, we have all heard the person who makes outragous statements or even profanity to get a response.
On newgroups, we have all read the same type of person who uses a keyboard instead of a microphone to do the same.
People who for some reason has to have a response by either writing or transmitting.
It occured to me that these people are exhibiting the same behavior except through different mediums.
I talked to a Psycologist at the school where I attend to get some insight on the reason. One of the observations after reading some responses by the same people was OCB (Obscessive Compulsiuve Behavior). Some of the symtoms are (There are many more I have found..)

1. repetitive behaviors (e.g., hand washing, ordering, checking) or mental acts (e.g., praying, counting, repeating words silently) that the person feels driven to perform in response to an obsession, or according to rules that must be applied rigidly
2.the behaviors or mental acts are aimed at preventing or reducing distress or preventing some dreaded event or situation; however, these behaviors or mental acts either are not connected in a realistic way with what they are designed to neutralize or prevent or are clearly excessive.

Another symptom was anger. Suppressed anger that can only be expressed in the 'safety' of radio or the internet.

The term 'troll' as we know it, is a person on the internet. However, we have had trolls for decades on radio too.

As technology increased and mediums changed the 'trolls' or emotionally disturbed followed.

Owning a radio that can transmit on those frequencies is illegal,
unless you have a license.

Hey rubbernecker, I didn't ask you for your name and email, I simply asked what name have you used on this newsgroup if you have been here since 1999. No need to get all defensive. I just wanted to know if your a new troll or an old one.

My name is george, for proof ask twistedhead or landwhale, funny you want me to post something then I have to believe you will post a reply with correct info .... LOL yeah ok

I'll email him and give him a heads up on the wrath you are about
to impose on an innocent party. That's not me, stupid, but thanks
for the belated congratulations.

Now for the record, all new techs in this area get KB3 calls.
While I've passed Elements 2 & 3, I can only use tech because
I haven't learned or passed Element 1. Next month I should
pass Element 4, then I wait to see how quick the Uncle removes
the S25.5 "burden" from Part 97. My CSCE for #3 is still good
for 11.5 months longer.

Don't bother to reply, I'll just ignore you from web2news.

The guy has renewed his license. That accounts for the recent date and
the "1" in the callsign.

I'd like to be there when you tell that to Avanti, makers of the
PDL-II and Moonraker series of antennas, which feature selectable
horizontal and vertical polarization! I think they would laugh at you,
Frankie, as will the many owners of those antennas.

> I certainly have some misgivings about 90% average modulation!

What? A "commercial broadcast engineer" that can't look at a schematic and know whether the circuit works as advertised or not? "90% average modulation" would be great on AM (ask a real commercial radio engineer, Frankie; they use 'em all the time), but when the operator isn't saying anything there'd be a rather obnoxious noise transmitted as the circuit searches for anything to keep the modulation at 90%. As witness the BBC some years ago, until they learned to turn down the processing.

But why don't you know this IF you're really a commercial broadcast engineer as you claimed?

I have watched this NG from time to time and see more people bitchin'
about "Illegal activites" than I see people helping each other out or
just plain having an electronic conversation. I will just post my
opinion here that I think might speak for some others here.

I do alot of "Illegal" things. Sometimes I drive to fast, I smoke
weed daily, I run power and shoot skip. sometimes I get real wild
and (GASP) whistle into my radio or use an echo board. Before you
lecture me and talk about my "Illegal" activities, realize that I
dont give a fuck.... As long as I'm not actually harming another
human being I really dont care.

You whiny little hind tit suckers need to realize that there are many
other things that you can do to change the quality of your hobby. You
could be proactive and educate a younger generation about the joys of
amateur radio. You could build a great website promoting your hobby.
Instead all you do is sit here and troll.... it's easy, and somehow
provides instant gratification to your soggy little porn saturated
brain.

This NG is about CB radio,,, NOT ham radio, and not about the
"Legality" of amplifiers. You can waste your keystrokes all you want
ranting and raving about how you want a perfect world with no RF
saturation, but it aint ever gonna happen. As long as I can get an
amp I'm gonna run it....

Please, to all you snobby HAMS out there.... Do something useful....
come over here and shampoo my crotch.

That desperate forgery of Aaron was brought to you by a very desperate
"Richard Cranium".

927. RS CB antenna looks like a cell antenna, works great!

Newsgroup: rec.radio.cb

re: "looks like a cell phone CB antenna"

Went to one of the local monthly ham flea markets... saw a cell phone antenna in a box with a pl-259 crimp connector on the end. I figured it to be one of the "look's like a cell phone" - CB antennas sold by Radio Shaft (Shack). Picked it up for $1

A quick check with the return loss bridge shows it to be well designed for what it is.

Put the darn thing on the air and it talks pretty well. Probably wont talk as far as a K-40 would, but for practical close range comm... it's going to work just fine. I'm no longer banging parking garage lamps out with it on the vehicle roof.

So Radio Shack gets away with one decent working "look alike" antennna. Much better than the old "look like a car radio" antennas... which were pretty much crap.

cheers
skipp

Have had some note that "Buy Now" might be a few dollars steep. Please when looking at this
bare in mind that it truly is in great condition inside and out. It also isn't a "new" model that many
dislike. It also isn't a "sound tracking" that so many dislike and end up disabling anyway.

Thank you for the look.

Actually, there are some... but, most aren't capable of transmitting
on the repeater inputs, only the repeater outputs (this is how you end
up with 22 channels on many of these hybrid FRS/GMRS radios).

> Plus they
> don't have any offset capability either which is
> also required to use a repeater system.

There are a few that actually do - Motorola makes one; but, one would
be much better off buying a "real" GMRS radio that didn't suffer from
the integral antenna limitation.

> And, I

That is generally true.

>and know whether the circuit works as advertised or not?

Not when you have four high-gain, high input-Z OP-amps on the same chip, all inverting, all DC isolated on both the inputs and outputs, and all outputs are unloaded. IOW, any one of them could start oscillating at any time. Or, like I said, the thing may not even work at all because it might lock up on power up. As far as the "processing" is concerned, it's nothing more than a clipper. The whole thing can be done much more easily with a few discretes, and I would certainly have much more confidence in the circuit.

> "90% average
>modulation" would be great on AM (ask a real commercial radio
>engineer, Frankie; they use 'em all the time),

Considering that the circuit is nothing more than a preamp and clipper, I have no idea where he gets the idea that it will achieve 90% average modulation. And in case you missed class, any form of compression and/or clipping is a form of distortion; i.e, more compression equals more distortion. Years ago, some AM broadcast stations would crank up the compression to the point where the sound quality was offensive, but that's rarely done anymore.

> but when the operator
>isn't saying anything there'd be a rather obnoxious noise transmitted
>as the circuit searches for anything to keep the modulation at 90%. As
>witness the BBC some years ago, until they learned to turn down the
>processing.

You are professing your ignorance yet again -- noise gates have been around almost as long as compression. And for your information, compressors and gates are considered ancient technology in broadcasting these days, because with the newer digital audio processors you can tailor your response curve to just about shape you want in less than a minute via software.

>But why don't you know this IF you're really a commercial broadcast
>engineer as you claimed?

Not nearly as much as I'd like to. Have travelled exttensively
through Canada, US, Mexico, England, Scotland & Wales.

Admittedly, most of the information I have is second hand.. Australian
Uncle, ...Father and Mother travelled extensively for years through
Europe and the far East..Dad worked in India for some time..My
Daughter who works in Hong Kong, just came home from 4 months in
Mainland China.

While there is no substitute for first hand experience, in today's
information age, a great deal of knowledge about a place can be gained
without actually being on the ground.

While I may not have the stamps in my passport that others do, my
lack of world travel experience does not invalidate my position that
in most countries where the rule of law prevails, anything which is
not forbidden, is permitted.

Valid point. I don't....yet.

The whole " not every country has signed the agreements" argument was really just a rear-guard action on my part untill I could get more information to bolster my argument.

I thoght my own country had changed its position on CB skip talking and was going to quote our regs to you. I then discovered that they hadn't changed at all. At that point all I had left ,was the idea that it is extremely unlikely (IMHO) that every country in the world had outlawed 11 meter DXing.

And while I believe that there are a number of countries who have no legislation prohibitting CB skip talking, I have no hard data yet to back that up.

service.
> They used the "export only" shield.

BULLSHIT. The Ameritron AL-600 was sold in the US for years and years.
They
stopped building it when the tube dried up, reconfigured it, and called it
the AL-811.

>
> >Ameritron only stopped using the tubes when they became NON cost
effective
> >(read this, supply of NOS tubes dried up).
>

amps.

Again, BULLSHIT. They stopped building them when they couldn't get the
tubes anylonger.

Don't believe me, ask Tom himself. He is a regular on the AMPS forum.

> >Which where the legitamate amps from the 300A / 350Z days?
>
> "Which where..."? There have been plenty of 'legitimate' amps through the
years.

little
> (but important) tidbit of info, didn't you?

And how many of those same manufacturers also built a sweep tube based amp
or product?

Whoops. Trolling again, arntcha!

I spent a little time in the Middle East. While I was there I learned that there
are places you don't go, people you don't talk to, things you don't say, etc,
even though there is no law forbidding such things. I have been other places as
well, and it's pretty much the same way everywhere I went. The US is pretty
unique in that we need every single little rule of conduct to be codified as law
in explicit terms before people finally decide to behave themselves. But as
exemplified in this newsgroup and on the Citizen's Band, even -that- doesn't
always work.

945. FREE MIKE WIRING TIPS & TRICKS

Newsgroup: rec.radio.cb
Date: 2003-07-15 05:09:58 UTC
From: Lou Franklin <lou@cbcintl.com>
Message-ID: <3537hvgqhdf3g3o8gpgcm2ej76mok3sum5@4ax.com>
Source record: 162479

Trying to fix a mike, or wire a new mike or power mike? Can't figure out which mike socket pin(s) and wires are which? Plagued by RF feedback squeal? Check out our FREE mike wiring guide. Everything you need to know on the subject! Follow this link:

www.cbcintl.com/docs/mikewire.htm

We specialize in CB books, plans, kits, and high-performance CB accessories. Please visit our Web site to see all those "goodies" you just can't find anywhere else!

www.cbcintl.com

You can also download our complete CB catalog, or just the Order Form from the home page. We've also got a new Email Order Form (for VISA/MC) if you're in a hurry.

* *
In case you didn't already know...

Who are we? Since 1976 we've been the leading supplier of books, plans, and kits just for CB radio. Do-it-yourself repairs and modifications, 10-Meter Ham conversions, amplifiers, FM converters, bleedover filters, adding new frequencies, etc. Secrets of how to increase your power, range, and privacy.

For product questions or additional details
on what we offer, please email us directly at:

You are right, I was thinking of a different company. At least you are paying attention....

The AL-600? Seems even the Ameritron site doesn't have any information on an AL-600. I did a couple searches and found out that many people refer to the ALS-600 as the AL-600, but the ALS is a solid-state amp. So do you have a reference to this AL-600?

Regardless, take another look at that page I linked above. Look closely at what type of tubes the Ameritrons used: 3CX1200A7, 8877, 572B, 3CX800A7, 3-500Z, 811, 3-500Z... all tubes designed specifically for RF power. Only ONE of their amps listed used a sweep tube, the 6LQ6. Care to compare the cost of that amp with the others? Care to guess why so very, very few of their amps (I could find only one) were designed for sweep tubes, while all the rest were designed around tubes intended for RF power? Care to guess why they dropped sweep tubes? Oh, that's right, because of the cost of the tubes. Right. So they built amps with more expensive tubes instead. Sure. Ok.

Again, look at that page. Count how many sweep tube amps were made by the quality manufacturers, like B & W, Collins, Drake, Globe, Gonset, Henry, Johnson, Kenwood... even the U.S. military? Not even a handful, and none for the military. Why do you think that is, Toll? And what is the mil-spec you use for your wattmeter?

>> >Ameritron only stopped using the tubes when they became NON cost

From: scott_unit_69@yahoo.moc (Scott Unit 69)
I logged in, saw 20 messages for an instant, then there was one. Why waste your time on trolls? I realize the water must be a bit rough right now. The storm is churning in the Gulf...

_
Ah, hell,,it was like what you had a few weeks ago,,rain, rain, and more rain....2 inches yesterday in less than 2 hours, the weekend wasn't much better. It's why I can't take winters up north,,the sun stays away too long and staying indoors for all this amount of time is not healthy nor conducive to one's reasoning capabilities,,,it makes one go insane....yea,,that's the ticket...temporary insanity from lack of 'ol Sol.
I did hear a Galveston mobile the other day. crystal clear and the skip wasn't wavering at all....I checked the logs and the last time I had such a direct line to the area was when a hurricane was near the same spot...those storms in my front yard saltwater pond always make communications to the horn with ease....had Rhode Island, Delaware, and parts of Pennsylvania yesterday on 38 SSB, no Maryland,,,,lately when we get skip from Maryland, it seems to always come from the other side of the state.

In response to your endeavors involving knocking the AMers from Florida off the frequency with 200 whiskey SSB on the sideband channels, try channel 40..you can do this as frequently as you wish and never run out of Florida AMers..of course, with what some of these folks are running, even 200 watts through a beam isn't going to get you heard over the folks that use 4 digit linears to do battle with a station a half mile away, and there are plenty. We may supercede Phoenix as the wild, wild, untamed radio void...ah, what the hell,,.....,,everyone across the country is talking to Fl or TX...Arizona gets out only when we unkey and has lost their stature.....turn on any eleven meter radio (when the DX is running) and one hears DXers from Fl or TX or those that are calling for Fl or TX on a daily basis. Next time the skip is running from your area, email me,,we may be able to communicate.,.....perhaps legally.

Bovine excrement! TRANSMITTING with that radio on certain frequencies
may be illegal; merely possessing it is not. You can LISTEN using any
radio you want to pay for, no license required. We've been around that
block before, Aanal Aaron, apparently you haven't learned anything
yet.

The question that remains, is what was your reason for replying to your own post? I merely pointed it out....

You pointed nothing out because that is just it twisted nutz that was not my post, why would I post something deragatory about myself and the AKC. I just blamed george because it came from aol and anything that is posted via aol has to be george according to you guys. Perhaps you can keep notes so we dont get to far ahead of you. As usual you have no clue and accuse people at will with no proof other than opinion.

Florida is a hard state to hit from here, like New York City. Upstate
works. I hear south starting about the Carolinas.

> In response to your endeavors involving knocking the AMers from Florida

40 is used here by a group that's been on CB longer then me, and are hams
as well. I keep hearing them on the bands. I may have to make contact soon...

> for Fl or TX on a daily basis. Next time the skip is running from your
> area, email me,,we may be able to communicate.,.....perhaps
> legally.

Since the skip noise has been overwhelming lately, 90% of our club
is hanging on 2 meter simplex. About every half hour, someone checks
11 meters and reports it's still trashed, so we stay on 2. We would
like to be able to use 11 so we don't have to be so careful as to
what we say. It will be on tonight. Net is 2030 local time.

Yes it really is too bad they are restricted to FM mode only. HF DX is
not intended to be a feature of the service.

Maybe you should call me instead of some innocent party.

BTW, when you do find _MY_ address and cellphone #, anonymous calls aren't answered...
I don't have a home phone, just a cable modem. You won't find me in the phone book.

You see, after all these years on CB and internet, I don't leave a good trail to follow...

> small) antenna plus an increase to 2 watts would yield a considerable gain.

Also, higher quality receivers make a big difference. One never sees
specs on the packages of FRS or GMRS/FRS hybrid receivers - but most
of them have to be absolutely awful... manufacturers know that 99.9%
of their FRS FRS/GMRS hybrid customer base couldn't understand
receiver specs, even if they made them available. For most "real"
GMRS, MURS, ham, or business radios, you will easily be able to find
the specs - usually in the user's manual inside the package, or on a
on-line spec sheet at the manufacturer's web site... fact is, I'd
guess than more than half the ham Techs don't understand receiver
specs.

They are only allowed to use FM, and they must have a license.

hey folks
im finally around to tinkering with my galaxy 33
its an older model,,has a date under the cover in magic marker
power con-9-13-93
made in malaysia
ok,,it hears good
but when i key up it burys other radios meters
and when i talk it swings backwards
my voice is heard,,,but it is accompanied by a buzzing sound
it is modified for cb channels
i also noticed r249 was cut and resoldered
and also tr53 is removed completley
i recently picked this up at a flea market for 35.00
and do not know its history
i do know the hack that was in it could not solder
i have reflowed all his solder joints
so it looks acceptable
i am trying to get it,so when i take it to a shop
alls he has to do is tune it up for me
not spend hours on the bench going through it
thanks all
don

That's actually the most reasonable and logical thing I've ever seen
you post, Aanal Aaron. Too bad you're trying to impose it on others,
instead of applying it to yourself.

You, Frankie-boy, Georgie-girl, and others have attempted to control
other people thru trolling for quite some time. It hasn't worked, it
doesn't work, it won't work. If FCC enforcement hasn't worked, what
makes you believe that your lame trolling will?

You are quite correct: Ain't nothing gonna change it. All you can do
is control yourself, something you're really poor at. That applies to
you, Aanal Aaron, to Frankie-boy, to Georgie-girl, and the others. So
why bother taking up space here to complain about it?

CBers are aware of the Rules, and a few of them make a decision to
violate them. You are not an FCC operative (if you are, what's your
badge number?), nor are any of the other trolls. Hell, Frankie-boy
isn't a ham or a "commercial broadcast engineer" as he has claimed.
He's lucky if he's even a tech.

Thus, you might as well give it up. The best you can do is operate
your CB legally and try to set an example. Nothing else is going to do
anything but raise your blood pressure.

But that won't stop Frankie-boy or Georgie-girl from trolling, will it?

Not to be the bearer of bad news, but anyone located anywhere in the lower 48 can claim any unused call for the lower 48 as a 'vanity' call. Yes, we have a couple of '8' calls here in the Rochester, NY area. If I wanted jrh in my call and couldn't find one available as a '2', I could apply for (and get, if it isn't assigned) a '3', '1', '0', or whatever. KG6 is now a California call. KG6AAY is assigned in California; it used to be the amateur radio station at NavCommSta Guam (receiver site). If you're confused, think how confused us old timers are :))

Wrong Anal Aaron, transmitting on freeband frequencies is perfectly
legal if you have an "export" radio and use less than 4 watts! Next time
check your facts! TROLL!

You and Georgie-girl Busch and Frankie-Girl are a joke! I'm not anywhere
near Norfolk, remember? Georgie-girl claimed I'm in Rochester, NY! And I
don't work at the Naval Base and I don't live in Virginia either! I have
nothing to do with the Free Radio Network or pirate radio! And I don't
use sock puppets when I troll rec.radio.shortwave and harass people
about satellite radio! Loser! TROLL!

ok here goes >> A year old Galaxy DX-55V, Looks and Works brand new....has variable pwr, .5 watt to 6 watts...will modulate to 30 watts. comes with pwr cord and orginal galaxy mic. i have a Wilson 500 Mag Mount antenna. about a yr old also.... I have a DaveMade m-80 i bought about 2 months ago.....everything is a 9.5 on a scale of 1-10. hehe....10 is new, nothing is new. I'll take $250 bucks for everything, email me if your interested

Hey. You ever get on SSB any? I live in downtown Bflo and usually
monitor 27.555MHz USB.

That would be illegal for him to do that and he risks losing his Hammie
license to boot if caught there.

Why do you bother posting and taking up space regarding what we do ? It is a
free world and as a USA citizen we are afforded many of lifes great
pleasures posting to this NG is one of them. Now go troll someone elses
posts.

> going to be in that database????

It's at the FCC, QRZ, Buckmaster, Hamcall...you have to know where to look.

I spent the night on both bands, communicating. Can you do that on CH6?

Never use AM anymore. Try me on the last four. My TRC-451 has 40 U/L and a stock mike. Sidebanders don't need echo or power mikes or roger beeps. Just good, clean audio.

LMAO!

I think Part 15 allows 10,000uV (.01 volts) at 3 meters.
That's much less then 4 watts.

> Next time check your facts! TROLL!

I couldn't have said it better, myself.

>are unloaded.

Digital speech processor?
I have details of his "DSP" - Dynamic Speech Processor, which makes claims
about a 90% average... so seems to be what is being referring to above.

Looking at the diagram, the first amp is a buffer stage, the second has a
gain of about 45 and the third a gain of about 21. From his figures for a
standard mic output, a loud whistle should produce about 6 volts into the
clipper... which is down to 500mV from the clipper into the output amp.

> IOW, any one of them could start oscillating at any time.

I assume that you do not have a copy of Lou's guide to the DSP...

<quote>
you may get self oscillation (squealing) due to the overall high gain of the
combined DSP, power mike (if used), and radio circuits
</quote>

And...

<quote>
The squeal problem is very common in newer Uniden SSB rigs
</quote>

His "cop-out" is that with "correct adjustment", this should not happen.
But, he is putting this adjustment in the hands of people who he has said
cannot even solder correctly. And how can anyone adjust it correctly with,
as he suggests, an SWR/power meter or someone listening to your signal?

> Or, like I said, the thing may not even work at
> all because it might lock up on power up.

More likely, it will fail due to poor building of the circuit.
I had someone ask me to fit one for him, which he supplied as supplied by
the shop, ready made. There were all kinds of problems, including the
screened wires not being correctly connected - they were shorted between
screen and inner wire.

Also, the version I have the details for had the LM324 fitted in place of
the LM3900. It should be noted that the LM324 is a "domestic" spec chip...
and may fail in temperatures below Zero or above +70° centigrade.
The LM2902 (-40° to +85°) or LM124 (-55 to +125°) are better.

>> "90% average
>>modulation" would be great on AM (ask a real commercial radio
>>engineer, Frankie; they use 'em all the time),
>
>Considering that the circuit is nothing more than a preamp and clipper, I
> have no idea where he gets the idea that it will achieve 90% average
> modulation.

Does he claim that *the DSP* will manage that magical 90%, or just that the
figure is possible?

<quote>
With correct speech processing, it is possible to increase the average
modulation to about 90%!
</quote>

Unless someone has seen a statement claiming that his product does that
"90%", or that the "90%" can be done without unacceptable distortion or
harmonic content... then it is nothing but sales bumf- careful wording.
Also, it says, "about 90%".

However, here is another of quote from Lou:
<quote>
Up to 15dB of clipping is quite acceptable to the ear
</quote>

The average peak to average ratio figure for the human voice is 14dB,
although some people may be higher or lower. The 90% quoted may
be for some people with a lower than average ratio.
Even then, to get such a high average, without an unacceptable level of
distortion, would be pretty tight... and certainly not possible without
using proper test equipment to adjust the device exactly.

>in case you missed class, any form of compression and/or
>clipping is a form of
>distortion; i.e, more compression equals more distortion.

Certainly with clipping, but how about a VOGAD?
If it is set to reasonable attack and decay times, there should be no
problem. However, the time delay means that it would not work the same as
clipping.

> Years ago, some AM broadcast stations
>would crank up the compression to the point where the sound
>quality was offensive, but that's rarely done anymore.

In the UK, Radio1 manages to create "offensive" audio without adding
distortion... they just play crap "music".
;~)

>> but when the operator isn't saying anything
>>there'd be a rather obnoxious noise transmitted as the
>>circuit searches for anything to keep the modulation at 90%. As
>>witness the BBC some years ago, until they learned to turn
>>down the processing.

The "searching for noise" will probably be associated with something
more complicated than the simple amp and clipper used in the
DSP... possibly a combination of VOGAD and clipping.

Brainbuster.

Correct, whoever is pretending to be an Aaron
is now posting from the Department of Defense.

Sorry Richard, that's not George. The other person
pretending to be an Aaron is using a DoD computer.

That's not Aaron, he's posting from a DoD
account. Aaron used AOL. I still think someone
should report him for wasting tax payers money
trolling the newsgroup. Think about it, you are

paying taxes to let this person troll the newsgroup.

Hey chickenchoker, I don't give two shits who asked what. I don't give a
damn if your name is georgie-porgie or not. You are a troll and I wanted to
see what happened. And I won a bet that you were gonna post something
stupid to boot. This is the correct info and I'm done with you.

I noticed assclown.

I don't give a
> damn if your name is georgie-porgie or not.

Then why did you ask what it was? See your paragraph above assclown,
remember you don't give 2 shits who asked what?

> You are a troll

And so are you , were even I guess

>and I wanted to see what happened.

The onkly thing happened was you made an ass out of yourself again, trolling
under this new name.

> And I won a bet that you were gonna post something
> stupid to boot. This is the correct info and I'm done with you.

Really you won a bet, damn can I get some action too? i figured as much you
are done since you have nothing left to say that makes any sense. TROLL

"onkly"? You fat-fingered jackass...

I tell the truth. Troll? Nah... "...you made an ass out of yourself again"
But how could that be when I never made an ass out of myself before? You're
the one who can't type let alone spell... under-educated, pompous ass.

Sure. Everytime you post a stupid response (i.e. TROLL), kick yourself in
the nuts (if you have any). And everytime you TROLL, I get free gas money
for the weekend bike ride. Go get 'em chickenchoker...

i figured as much you

>Twitsy, what was your reason for the reply to

>this post? "Twistedhed"

--
The question that remains, is what was your reason for replying to your
own post? I merely pointed it out....

>You pointed nothing out because that is just it

>twisted nutz that was not my post,

You messed up..that's what takes place when you are reduced to talking
to yourself. It most certainly was your post,,,I even isolated your IP#
so you don't miss it this time around....

-

>why would I post something deragatory about

>myself and the AKC. I just blamed george

>because it came from aol and anything that is

>posted via aol has to be george according to

>you guys.

I claimed nothing of the sort.
Talking to yourself or attacking me will not change what you wrote.

>Perhaps you can keep notes so we dont get to

>far ahead of you.

You, speaking to yourself, does not constitute "we"...LOL.

>As usual you have no clue

It's not about me,,,you screwed up, I merely pointed it out,,,now you're
mad. In turn,,,you must attack.....grow up.

>and accuse people

>at will with no proof other than opinion.

Look at it again. You made both posts. You merely were called on it and
are having a cow about it. .

>Florida is a hard state to hit from here, like

>New York City.

Ahh,,your New York is my Georgia..I hit it last week for the first time
in almost two years.

>Upstate works. I hear south starting about the

>Carolinas.

And I hear north, beginning with SC, all the way up the coast.,,with the
exception of MD (usually).

_
In response to your endeavors involving knocking the AMers from Florida
off the frequency with 200 whiskey SSB on the sideband channels, try
channel 40..

>40 is used here by a group that's been on CB

>longer then me, and are hams as well. I keep

>hearing them on the bands. I may have to

>make contact soon...

Channel 40 AM has been in use as long as I can remember in this
area...appears it's that way in many areas of the country. Somehow, I
don't think that's going to change.
I can think of a few hammies right off the bat in this area who are
die-hard AMers on cb, but there are way more freebanders in the area.

_
  Next time the skip is running from your area, email me,,we may be
able to communicate.,.....perhaps legally.

>Since the skip noise has been overwhelming

>lately, 90% of our club is hanging on 2 meter

>simplex. About every half hour, someone

>checks 11 meters and reports it's still trashed,

>so we stay on 2.

Haha..I know some locals who share your view,,but to others, that
overwhelming skip noise is music to our ears.

>We would like to be able to

>use 11 so we don't have to be so careful as to

>what we say. It will be on tonight. Net is 2030

You have been just introduced to one of our
resident trolls George, WA3MOJ. He is a troll
and posts under many assumed names and
different accounts like AOL portal and Web2News
anonymous accounts.
You are better off ignoring him or kill filling
him, but remember, he changes nics like a
normal person changes underwear so you would
have to stay on top of the kill file.

Landshark

PS now watch the foul language, sexual innuendoes,
hate filled response from him, proof that he is a troll.

_
If that was you I heard on July 4th, I 'd hold on to that set-up,,it
sounded really good.
N3CVJ has one of those Dave-Made M-80 linears, in addition to a Texas
Star. He claimed the Texas Star is much cleaner. If you are having a
"bleed" problem, you may wish to look into purchasing or trading for a
Texas Star, or do some fine tuning and tweaking to get the interference
to a mild roar. Try the process of elimination, stock mic, reduced TX
power, audio, adding a better ground, etc. Good luck whatever you chose.

I use killfile that clobbers certain words. I figured out what domains
the troll likes to use and set up rules that can a message if the
sender contains certain things. Even if "he" changes his name, it
is still sh!tcanned.

It must be too hard to have a normal conversation with a real person...

Hello Aaron,

Hope all's well with you. I believe the "challenge" is half the fun.
Pop'Comm magazine did an article on a chap who works a fair amount of DX
using only 4 Watts in FM mode. Even pictured a pretty nise QSL card.

my post,

You messed up..that's what takes place when you are reduced to talking
to yourself. It most certainly was your post,,,I even isolated your IP#
so you don't miss it this time around....
****

Bullshit, the original post to this thread was most certainly not from me,
your caught in another lie because how did you isolate the IP if it was from
AOL?
LOL Your caught lieing again you heathen

–

>why would I post something deragatory about

>myself and the AKC. I just blamed george

>because it came from aol and anything that is

>posted via aol has to be george according to

>you guys.

I claimed nothing of the sort.Talking to yourself or attacking me will not
change what you wrote.

Exactly, i wrote nothing yet you want to lie again with of course false
accusations and your normal tistsy run around thread. ROFLMAO, Your
a flat out joke,.

>Perhaps you can keep notes so we dont get to

>far ahead of you.

You, speaking to yourself, does not constitute "we"...LOL.

I am speaking to you jackwad, and only you

>As usual you have no clue

It's not about me,,,you screwed up, I merely pointed it out,,,now you're
mad. In turn,,,you must attack.....grow up.

You pointed out nothing jackwad, a person made a troll post from aol about
me frank and a few others, I said cut it out George. Now please tell me what

did you point out and the funny part how did I screw up ? You better grow up your ACTING LIKE A 2 YR OLD.

>and accuse people

>at will with no proof other than opinion.

Look at it again. You made both posts. You merely were called on it and are having a cow about it. .

You are really a asshole twsity, below this is the original post to this thread, i responded to it and said cut it out George with the 2nd below post so you tell me How was i talking to my self assclown? You pointed out nothing except your a fool

I for one have many problems with so called "CB'ers". Everything from the body odor to the frequent trips to the uneducated manner with which they speak offends me. This collection of cretins and manual laborers MUST be held accountable for their collective actions... by collective actions I do not mean simply them running their mouths off at whatever rate pleases their simple intellects.... but rather I mean to address one issue in this forum and one issue only:

THE SATURATION OF OUR 10 METER BAND!!! I worked hard getting my amateur license, as did my Father and his Father before him. The last thing I need is some miscreant blabbering on about his new "Dave Made" whilst shoving his mouth full of "Hungry Man TV Dinners" while I am trying to have a converstion with my friend across town.

I realize that this is a CB Radio forum and not a Ham radio forum. However, I am so very, very lonely that I cannot resist the urge to post my feelings and thoughts here. I have a combination of personal problems including but not limited to. Napoleonic Complex, Bi-Polar disorder, and severe Anti-Social behavior. To add to this mess my belly has grown so large that I can no longer see my penis in the shower.

My own problems aside, lets focus on the larger underlying problem of ILLEGAL CB USAGE!!! My good friend ERIN VOOBNER and I have come up with a strategy. Every time someone posts something illegal we will call them on it by typing "ILLEGAL" as many times as possible, and then cutting and pasting whatever documentation we can find to support it. It might not work.... hell, I bet it works about as well as telling people not to tear the tag off a mattress. But it sure feels good. Almost feels as good as when ERIN VOOBNER fellates me repeatedly while watching animal porn.

So please fellow HAMMIES and concerned citizens... Help me by complaining as vigorously as possible. These fools must be held accountable for their ILLEGAL ACTIONS!!!! even if the rest of the world could give a shit.

(Takes off fatman suit and laughs)

I'm sure it was just an honest mistake.

>Looking at the diagram, the first amp is a buffer stage, the second has a
>gain of about 45 and the third a gain of about 21.

Look again -- the first stage is a mic preamp with no input impedance matching (IOW, it has a very high input impedance and probably picks up a lot of hash). The second stage has variable gain, which is how he adjusts the clipping level. It would be much easier to eliminate that stage completely, and adjust the clipping by varying the voltage on the tail of the clipper.

> From his figures for a
>standard mic output, a loud whistle should produce about 6 volts into the
>clipper... which is down to 500mV from the clipper into the output amp.

Hmmm... "a loud whistle"... gee, wouldn't it be great if all technical specifications could be that simple...

>> IOW, any one of them could start oscillating at any time.
>
>I assume that you do not have a copy of Lou's guide to the DSP...
>
><quote>
>you may get self oscillation (squealing) due to the overall high gain of the
>combined DSP, power mike (if used), and radio circuits
></quote>

He obviously hasn't had much experience with OP-amps. The hardest part about working with OP-amps is making them NOT oscillate. When you have four inverting amplifiers with high gain (open loop gain for the LM-324 is around 100 dB) mixed with very high input impedance (we're talking giga-ohms) and no load on the output, and when the inverting input pins are directly adjacent to the output pins (as is the case with all four sections of the LM-324), that puppy can probably be coaxed into oscillation by nothing more than an abstract thought.

>And...
>
><quote>
>The squeal problem is very common in newer Uniden SSB rigs
></quote>
>
>His "cop-out" is that with "correct adjustment", this should not happen.

Sure, just switch the first stage to low-gain, and turn down the clipper adjustment (the gain of the second stage). But that defeats the purpose of the circuit.

>But, he is putting this adjustment in the hands of people who he has said
>cannot even solder correctly. And how can anyone adjust it correctly with,
>as he suggests, an SWR/power meter or someone listening to your signal?

A dual-trace scope would be nice, and an audio signal generator would help. I wonder if Heathkit ever sold kits for "whistle-generators"....

>> Or, like I said, the thing may not even work at
>> all because it might lock up on power up.

>and may fail in temperatures below Zero or above +70ï¿½ centigrade.
>The LM2902 (-40ï¿½ to +85ï¿½) or LM124 (-55 to +125ï¿½) are better.

I never found the temperature grade to be critical. Those are the guaranteed
specs, but even in extreme conditions most commercial grade chips will still
work fine.

>>> "90% average

Nice catch!

>However, here is another of quote from Lou:
><quote>
>Up to 15dB of clipping is quite acceptable to the ear
></quote>
>
>The average peak to average ratio figure for the human voice is 14dB,
>although some people may be higher or lower. The 90% quoted may
>be for some people with a lower than average ratio.

There is no absolute value to the amount of clipping that is "acceptable", let alone intelligible. The peak-to-average volume ratio varies greatly from person to person because people have different voice properties -- differences in harmonics, pitch, articulation, etc. There are also differences in people's hearing. Then there are other factors such as background noise, band noise, the type of speaker and radio used, etc. There are WAY too many variables to make such a broad statement like "15dB of clipping is quite acceptable".

>Even then, to get such a high average, without an unacceptable level of
>distortion, would be pretty tight... and certainly not possible without
>using proper test equipment to adjust the device exactly.

And at least a 3rd or 4th order low-pass filter after all that clipping.

>>in case you missed class, any form of compression and/or
>>clipping is a form of
>>distortion; i.e, more compression equals more distortion.
>
>Certainly with clipping, but how about a VOGAD?

Some of us old farts still call that AGC.

>If it is set to reasonable attack and decay times, there should be no
>problem. However, the time delay means that it would not work the same as
>clipping.

Which is better because you don't have all the harmonics. But the use of both is best, since a clipper will catch any fast-rising signals that slip past the AGC.

>> Years ago, some AM broadcast stations
>>would crank up the compression to the point where the sound
>>quality was offensive, but that's rarely done anymore.
>

>
>
>The "searching for noise" will probably be associated with something
>more complicated than the simple amp and clipper used in the
>DSP... possibly a combination of VOGAD and clipping.

The noise he is describing is ambient and/or preamp noise. It can be heard when the maximum gain is set too high or there is no noise gating.

1033. Power vs Mode (The fundamentals)

Newsgroup: rec.radio.cb
Date: 2003-07-16 20:23:14 UTC
From: Frank Gilliland <sparky@NOSPAMaimcomm.net>
Message-ID: <htbbhv8t2svf0if853an5q0hu13lohav9v@4ax.com>
Source record: 162566

Too many people are preoccupied with RF power; i.e, WATTS. What they don't realize is that the MODE of operation is far more important than power...

AM (Amplitude Modulation) is composed of three parts: The carrier, the lower sideband and the upper sideband. The carrier stays constant while the sidebands vary in power according to the modulation. When a 4 watt carrier is modulated to 100%, there will be 1 watt transmitted in each sideband, for a total of 6 watts of RF power that is being transmitted. But the voice can't modulate the carrier to 100% all the time -- speech does not have a constant amplitude. Average modulation is usually somewhere around 30%, so the average RF power that is transmitted is closer to 4.6 watts.

Now AM works fine if you don't mind wasting power. This is because the audio is carried only in the sidebands, not the carrier. And because the two sidebands are mirror images of themselves, only one sideband is needed and the other is wasted. If we eliminate the carrier and one sideband (resulting in the mode called Single Sideband, or SSB), we are left with a 1 watt sideband that will work just as well as if we burned 6 watts to transmit two sidebands and a carrier. In other words, SSB is -AT LEAST- 6 times more efficient than AM. But remember that average modulation is more like 30%, which means that a 0.3 watt SSB transmission has the same effect as using 4.6 watts to transmit that very same sideband using AM. Therefore, with normal speech, SSB is closer to 15 times more efficient!

Let's translate all this into watts. CB permits 12 watts for SSB. For speech communication, the average power is the same as the average modulation, or about 30%. So using voice on SSB the average power will be about 4 watts. Now since we already know that SSB modulated with normal speech is 15 times more efficient than AM. Therefore, 4 watts of SSB is equivalent to 60 watts of AM power, or 52 watts of carrier power with 4 watts in each sideband. And under 100% modulation the SSB power will be 12 watts, while it takes 72 watts to do the same job on AM (48 watts of carrier with 12 watts in each sideband).

But SSB has another advantage: Because it only uses one sideband, it uses half the bandwidth of AM (6 KHz for AM vs 3 KHz for SSB). That means it receives half the noise of AM, thereby doubling the all-important signal-to-noise ratio, and effectively doubling the power of the transmitted signal.

All summed up, a stock CB with SSB has the same range and talk-power as the same CB using AM with a 100 watt linear -- and it's LEGAL!

That would be "replies",,,,..hahahah...

>LOL, now you want to be a spell checker

Oh, no...what on Earth gave you such an oddball idea? I mentioned such
only because your dire need to insult another resulted in yet another
magnificent self-display of your ignorance.
See, you said:

>I actually

>think your just to stupid to comprehend what is

>written by the looks of your replys.

One would see how you would think in such a manner, given your
tremendous examples of grammatical and spelling incompetence. In other
words, I have no problems with your ignorance,,,,but calling another
"stupid" while professing your own lack of knowledge (and not even
realizing such) needs pointed out, imho,.........it neatly illustrates
the hypocrisy you lids share.

Lie? LOL..I merely pointed out both posts originated from the same
person,,the person sharing the 68.45.64.179 comcast address referred to
himself as WA3MOJ and talked to himself in the shown example, calling
himself "Geogre."

Yes either a lie or you are a dumbfuck, the original post to this thread was
from AOL, I made 1 reply to that post, are you with me so far.

Then you decide to repost another post of mine from a completly different
thread and say I am talking to myself. Lets look at this thread again

>ROFLMAO, Your a flat out joke,.

Glad I could get you laughing in addition to your constant bitching and whining.

>Perhaps you can keep notes so we dont get to
>far ahead of you.

You, speaking to yourself, does not constitute "we"...LOL.

>I am speaking to you jackwad, and only you

>As usual you have no clue

It's not about me,,,you screwed up, I merely pointed it out,,,now you're mad. In turn,,,you must attack.....grow up.

>You pointed out nothing jackwad,

Sure I did,,,look at ityet a third time.....

You had better look at it the original thread was from AOL, i replied to it you then jumped on my post I asked you why you did and you said I am talking to myself. So I ask how your bringing up ip adreesses and there is just one iop mine from my 1 post

>a person made a troll post from aol about me

>frank and a few others,

And had nothing to do with my cited example.
You mention it only in failed obfuscation attempts.

>I said cut it out George.

Yes,and I merely pointed it out.

>Now please tell me what did you point out and
>the funny part how did I screw up ? You better

Yea,,and they have nothing to do with the following posts,,,both from
the same addy.....I merely pointed out how one claiming to be WA3MOJ
responds to himself calling himself "Geogre." ...LOL. Need see it again?

See? Talking to yourself....don't get mad, get over it.

What does this post have to do with this thread? In this post I was asked my call sign by dickieboy cranium , I gave it and now you are alluding to something that is drummed up in your pea brain. How the fuck am i talking to myself this post was made on jun 29 in reply to dickhead cranium. Now you want to somehow connect it to a post by someone from aol cutting up on the AKC ... I will ask again how are these posts related

Isn't that the truth about Hamfests. I'm a ham myself and also do some CB communications as well. And the truth is of the several hamfest I have been to the past few years, is that the Hams there could use some deodorant and a truckload of bar soap. Not to mention they don't really know what cleanliness is and you can tell in regards to some of their shitty looking overpriced gear. I enjoy both modes being CB and Ham but these guys wouldn't know what a shower was if it was showed to them. In fact, I'll be going to a couple of hamfests here pretty soon and I can expect the usual stinky lardassed guys sitting around their beat up Ten Tec Corsairs they want 500 bucks for. There are a lot of quality hams but even amateur radio has it share of nasty ones.

Yeah, thats another one I didn't think of. Great comment. It must be a bitch for some of these people just to figure out a little bit of grooming. Usually you'll find the same guys with the Tee shirt from the last 3 days with the chicken grease or barbeque all of it too.

>same sideband using AM. Therefore, with normal speech, SSB is closer to 15 times
>more efficient!
>
>Let's translate all this into watts. CB permits 12 watts for SSB. For speech
>communication, the average power is the same as the average modulation, or about
>30%. So using voice on SSB the average power will be about 4 watts. Now since we
>already know that SSB modulated with normal speech is 15 times more efficient
>than AM. Therefore, 4 watts of SSB is equivalent to 60 watts of AM power, or 52
>watts of carrier power with 4 watts in each sideband. And under 100% modulation
>the SSB power will be 12 watts, while it takes 72 watts to do the same job on AM
>(48 watts of carrier with 12 watts in each sideband).
>
>But SSB has another advantage: Because it only uses one sideband, it uses half
>the bandwidth of AM (6 KHz for AM vs 3 KHz for SSB). That means it receives half
>the noise of AM, thereby doubling the all-important signal-to-noise ratio, and
>effectively doubling the power of the transmitted signal.
>
>All summed up, a stock CB with SSB has the same range and talk-power as the same
>CB using AM with a 100 watt linear -- and it's LEGAL!
>

Frank;
Statistical studies of the distribution of signals on the air
versus the signal strength shows that the probability of successful
communication will be the same if the SSB power is equal to one-half
the power of one of the two AM sidebands. Your 100 watt figure is
pretty close to what the studies show.

Whats the Peak Envelope Power of a Legal AM radio?
Why is 12 watts the limit for a legal SSB radio?

1063. FREE CB CRYSTAL MIXING CHARTS

Newsgroup: rec.radio.cb
Date: 2003-07-17 01:38:45 UTC
From: Lou Franklin <lou@cbcintl.com>
Message-ID: <1hvbhvcre7nni4p0elgnqe6hcuqb0oopdc@4ax.com>
Source record: 162597

We've now added all our crystal charts for free download/printing (PDF) on our site. These 36 charts cover about 95% of all American mobile & base CB models, and show exactly which crystal(s) affects which mode or channel. Very useful for troubleshooting "dead channels" symptom, or for modification to 10M or other freqs.

Check 'em out at: www.cbcintl.com/xtals/xtals.htm

We specialize in CB books, plans, kits, and high-performance CB accessories. Please visit our Web site to see all those "goodies" you just can't find anywhere else!

www.cbcintl.com

You can also download our complete CB catalog, or just the Order Form from the home page. We've also got a new Email Order Form (for VISA/MC) if you're in a hurry.

* *
In case you didn't already know...

Who are we? Since 1976 we've been the leading supplier of books, plans, and kits just for CB radio. Do-it-yourself repairs and modifications, 10-Meter Ham conversions, amplifiers, FM converters, bleedover filters, adding new frequencies, etc. Secrets of how to increase your power, range, and privacy.

snip

You are wrong about SSB being 15 times more efficient. Your reasoning
is flawed in that.....

If speech modulates a AM signal to a average of 30% then the same
speech will modulate a SSB to a similar reduced potential.
****
On A.M. , with a 4 watt carrier at 100% modulation , we have 2 watts
of audio power used for the sidebands. One watt on each sideband.
This duplication of sidebands is not necessary to convey intelligence.

If we use the same transmitter and convert it to DSB (double
sideband) by removing the carrier , we can now have 2 watts per
sideband.

If we now remove the other sideband , and concentrate all of
the power into one sideband , we have a 4 watt sideband. With
this method of removing the carrier and one sideband we can
put 4 watts of intelligence out on SSB as compared to 1 watt on
A.M.. This makes a SSB transmission 4 times as powerful as its
A.M. counterpart.

In addition to the above transmitting advantage , the SSB
signal has a receive advantage also. Since only one sideband is
transmitted , only 1/2 the bandwidth is needed. This means that twice
the number of stations could operate in the same bandspace as A.M.. In
addition to this , because the bandwidth needed is only 1/2 of A.M. ,
only 1/2 of the atmospheric noise is picked up with the signal. This
gives you a 3db advantage over an A.M. receiver.

So when you add it all up you have 6db gain on transmit , and
3db gain on receive. That's effectively 9db of total gain.

P.S. I forgot to mention the above 6db transmitting advantage is based on using the same transmitter with the SAME limiting power level used in each mode.

Using a 100 watt AM transmitter

SSB effective power= 1/2 of 25 watts in Each sideband, =12.5 watts

10*log 100/12.5 = 9.03 db

While I can disagree with Frank when he's being
a troll, even though is exact figures are a little off, basically
he's correct.

Not at all GW. He enjoys off roading as much
as I do, so we have been in contact concerning
off roading and the fun that goes with it.
I enjoy motorcycling, but also enjoy a little
mud bogging, hill climbing, rock crawling too.

Where did I say anything about PEP? I know what you are trolling for (if you're not trolling then somebody else will), and yes, the PEP of a 4 watt AM carrier that is 100% modulated is 16 watts. But that number is misleading because you are forgetting that an AM signal has a lot of excess baggage. This is one instance where less is more....

PEP is used when determining the maximum power handling capability of the final (output) amplifier. In other words, if the AM carrier is going to be 4 watts, the final must be capable of providing 16 watts. It means nearly the same with SSB, because the PEP rating of the output amplifier is the peak power level at which the signal will begin to distort, and since the peak-to-average modulation ratio is about 3 to 1, a transmitter capable of 12 watts should safely handle about 4 watts average power in SSB.

But if a transmitter is capable of 16 watts, it seems foolish to use AM with it's 1 watt sidebands when you can transmit SSB with an effective power of almost 200 watts AM or better, depending on your average modulation. The FCC limits the radios to 12 watts PEP, but that's still much better than 16 watts PEP in AM. In other words, PEP does not represent "talk-power".

For those who don't already know, Peak Envelope Power (PEP) is the RF power at the brief instant an audio cycle peaks the modulation. PEP is used to describe SSB power because the standard wattmeter can't measure the average power of an SSB signal. For example, if your radio is capable of 12 watts PEP, your average power will be somewhere around 4 watts, but you won't be able to tell because your wattmeter will be bouncing around with your modulation. So SSB is measured with a 'peak' value (PEP) instead of a 'real' value (RMS). So even though the needle is bouncing around, you just need to keep it below the maximum PEP rating of the radio.

OTOH, AM power is measured in RMS (true) watts, and is a measurement of carrier power only. The modulation is detected (demodulated) and measured seperately as a percentage. Modulation -must- be measured seperate from the carrier because carrier power should remain steady while under modulation; and modulation is read directly so the operator doesn't have to perform carrier subtractions and square-root calculations on a PEP reading in order to find the modulation percentage. Of course you can always add a PEP meter if you really want, but what's the point of making things difficult and expensive when you already have all the information you need?

>Why is 12 watts the limit for a legal SSB radio?

Because the FCC says so.

I can appreciate how you feel. I was active in CB back a few years ago.
What a dunderhead I must be. Perhaps someday we might have the pleasure of
meeting on 10 meters. No computers, please. Make it around 28.010 or so.
No computers. Cheating is too easy. Please try and have perfect copy. I
hope you can type 40 words per minute :))

Nice troll, however! (and I'm chuckling over your post - yep, I've know some
darn sharp CBers - one who can do probably 30 words per minute CW - he was
a high speed CW operator in WWII - and had his 1st class radiotelephone
license. I wonder why he wanted nothing to do with amateurs?). This should
make an interesting thread :)

The efficiency of SSB over AM increases as the modulation decreases, approaching
infinity as the modulation and output approach zero. That's because even when
there is 0% modulation in AM you still have carrier power.

>>**********
>>On A.M. , with a 4 watt carrier at 100% modulation , we have 2 watts

>>this method of removing the carrier and one sideband we can
>>put 4 watts of intelligence out on SSB as compared to 1 watt on
>> A.M.. This makes a SSB transmission 4 times as powerful as its
>>A.M. counterpart.

You bring up an interesting point, even though you don't know what you are talking about. If the final is capable of 4 watts AM (or 16 watts PEP) then it's capable of 16 watts PEP, whether it's AM, DSB or SSB. That's assuming the final is linear, of course. If the final is Class C then you can't do SSB at all.

>>In addition to the above transmitting advantage , the SSB
>>signal has a receive advantage also. Since only one sideband is
>>transmitted , only 1/2 the bandwidth is needed. This means that twice

Here's a corrected version just for you, Hypocrite Landshark:

==========
AM (Amplitude Modulation) is composed of three parts: The carrier, the lower sideband and the upper sideband. The carrier stays constant while the sidebands vary in power according to the modulation. When a 4 watt carrier is modulated to 100%, there will be 1 watt transmitted in each sideband, for a total of 6 watts of RF power that is being transmitted. But the voice can't modulate the carrier to 100% all the time -- speech does not have a constant amplitude. Average modulation of speech is generally accepted to be 33% (a peak-to-average ratio of 3 to 1), so under that standard the average RF power that is transmitted would be 4.67 watts.

Now AM works fine if you don't mind wasting power. This is because the audio is carried only in the sidebands, not the carrier. And because the two sidebands are mirror images of themselves, only one sideband is needed and the other is wasted. If we eliminate the carrier and one sideband (resulting in the mode called Single Sideband, or SSB), we are left with a 1 watt sideband that will work just as well as if we burned 6 watts to transmit two sidebands and a carrier. In other words, SSB is -AT LEAST- 6 times more efficient than AM. But remember that average modulation is 33%, which means that a 0.33 watt SSB transmission has the same effect as using 4.67 watts to transmit that very same sideband using AM. Therefore, with normal speech, SSB is 14.15 times more efficient!

Let's translate all this into watts. CB permits 12 watts for SSB. For speech communication, the average power is the same as the average modulation, or 33%. So using voice on SSB the average power will be 4 watts. Now since we already know that SSB modulated with normal speech is 14.15 times more efficient than AM. Therefore, 4 watts of SSB is equivalent to 56.61 watts of AM power, or 48.61 watts of carrier power with 4 watts in each sideband. And under 100% modulation the SSB power will be 12 watts, while it takes 72 watts to do the same job on AM (48 watts of carrier with 12 watts in each sideband).

But SSB has another advantage: Because it only uses one sideband, it uses less than half the bandwidth of AM (6 KHz for AM vs 2.7 KHz for SSB). That means it receives 45% less noise than AM, thereby increasing the effective transmitted power by a factor of 2.22.

All summed up, a CB radio capable of 12 watts PEP on SSB has the same range and talk-power as AM from an amplifier capable of 426.24 watts PEP (12 watts PEP is the power of one sideband from a 100% modulated AM signal with a carrier power of 48 watts RMS: Therefore, 48 watts RMS x 2.22 = 106.56 watts RMS (effective); 106.56 watts RMS x 4 = 426.24 watts PEP) -- and it's LEGAL!
==========

Feel better?

>
>They are only allowed to use FM,

True, athough they keep saying they are "testing" SSB and considering
allowing it.
Still, there's nowt wrong with FM... it is less prone to impulse type
interference.

If I had the choice of having two modes for UK CB, it would be FM and SSB.
Forget AM, as FM is great local and SSB is better for distance and
bandwidth.

> and they must have a license.

Not for much longer.
There are plans to remove the licence. If it goes ahead, from later this
year, new licences would not be issued but existing licences will be valid
for their full year. Although, existing licences will not be worth the
paper they are printed on - as they would no longer be needed. It's just to
stop people moaning about getting their "money's worth" from the fee paid
just before that date and asking for the unused part of their fee to be
returned.

Really, the "consultation" process is just for show - they must be seen to
be giving people a chance to speak up. Unless someone can give very good
arguments why it should not happen, then the licensing for CB and use of the
old UK only frequencies will be finished.

How did they end CB licensing in America... Did they just stop issuing them,
did existing licences become worthless, or did they phase them out in some
other way?

-B

>HF DX is not intended to be a feature of the service.

It was not intended to be, but it often is.
What they did at the beginning, to try to stop DX without outlawing it, was restrict the antenna length, type and height with power.

So, the antenna could not be more than 1.65m in length, had to be base loaded, had to be omnidirectional... and if you mounted it more than 7m off the ground, you could only use 400mW.
However, they found that encouraging the use of small antennas, close to the ground, with 4 Watts of power caused too much interference to TV and radio. As those who kept to the rules causes interference, while the "law-breakers" were running cleanly, the rules were changed.

They allowed 1/2 wave dipoles and 5/8 wave monopoles at any height, but still kept the restriction on beams. Yet, they never added a DX rule, but they clearly state that there is no restriction.

I cannot imagine them trying to add a "No DX" rule"... they already tried setting unenforceable rules, and simply made a rod for their own backs. The enforcement side of the RA (the RIS), have not the time or funds to be chasing things that are not causing problems, so they are unlikely to bring in any rule that will just cause them more wasted time and money running about.

Also, the UK have made the CB rules short and simple... with the purpose of limiting the chances of interference. If you add too many rules, or write it in "legal language" (like so may legal agreements), making it heavy reading... people just wont read it.

Brainbuster.

Snip snip...

Well I check in here at least twice a day.
Got other things to do right now that need doing..

Antenna to raise, amp to build, some transverters to
make and mo' money....

Maybe in the fall I'll have some time to participate more.

Kill filters have really been a help to me. It may be the reason
why the traffic has slowed. I have at least fifty of ya'll filtered out.

Maybe more. My guess is others are doing the same.

I'm not in the least bit worried about the future of this NG.

See ya
Carl

I stand corrected when running a mode below its maximum capability,
but if you are horse racing with the transmitters power rating being
equal between modes then this massive advantage disappears.
This would occur in a hors race, and when it does a SSB transmission
only has a 6db advantage over AM

Message-ID: <p9ddhvgdv77ig1dl4v5hjk66jtnvgjmslk@4ax.com>
Source record: 162648

Compaq 5315KS with the following:
Windows XP
1.3 GHz Athlon
512 MB
80 Gig hard Drive UltraDMA
12x CD/DVD Rom Drive
12x CD/CDR/CDR-W CD Rom Drive
56k v90 Modem
3.5" Floppy Drive
10/100 ethernet
Keyboard
Labtec Speakers (Amplified)
4 USB ports (Two up front)
All updates for XP kept up and any Compaq Softpaqs.

Really nice setup with box and all original that came with it,also have KDS X (eXtreme) Flat Monitor

Asking $650 Best offer or might sell without monitor. - shipping is buyers

Might consider partial trades for 10 meter rigs with AM/SSB (Kenwood,etc.) or mobile scanner on the higher end - no junk this isnt.

_
  Concerning the power issue, I have maintained the exact same thing many times. Talking to the other side of the world, barefoot in sideband mode, on 27 MHZ is a unique thing, fun to accomplish, and quite amusing to those of us who chase DX.

>Why?

I can only speculate. Any CB radio capable of both AM and SSB would probably use the same final, which must be linear to allow SSB operation, and be capable of 16 watts PEP (4 watts AM, 100% mod). But the -average- power of SSB, if limited to 16 watts PEP, would be higher than that of AM with a carrier of 4 watts RMS (assuming a peak-to-average modulation ratio of 3 to 1), and could require a final with higher power dissipation. So my guess would be that the FCC adopted the lower limit of 12 watts PEP to put the average RF power of SSB -below- that of AM, therefore preventing the need for a CB design that would allow AM power greater than 4 watts carrier RMS.

If you have a better explanation, please share it.

Do you complain when other people quote the entire post?
Only when they get a yahoo groups digest, repost the whole thing, and
make one top posted comment. WTF are they responding to?
But here you are, whining about someone else's post. Try a killfile.

>BTW, nice post about the use of sideband.

>Let's ban A3E from CB.

_
Better idea, let's ban Twistedhed from the newsgroup.

__
LOL,,,if I did leave,,your infatuation would only dictate you pretend
to be me again,,,,your addy matches the same 64.12 IP that forged me and
wrote "Respect for Freebanders". This email addy your are using now has
two separate points of origination...the one you are using now, where
you have forged me (64.12) and the 152.163 addy that posted the forge "I
am outlaw CB Genius".
Never have I seen your ego at all time low like it is now. Feeling bad
about yourself is a terrible thing...maybe you should turn off the cb
and get some fresh air,.come back when you are happy with yourself and
not interested in assuming another's identity......LOL.

The only one that I have seen is, they just took the 16 watts PEP for
AM, subtracted the 4 watts for the carrier.

Thats why I asked you earlier about PEP power for an AM radio.

Understood, but why 12 watts? A legal AM radio has 16 watts PEP. Why didn't they pick 16 watts?

(UknowMeJP) ok here goes A year old Galaxy DX-55V,
Looks and Works brand new....has variable pwr, .5 watt to 6 watts...will
modulate to 30 watts. comes with pwr cord and orginal galaxy mic. i have
a Wilson 500 Mag Mount antenna. about a yr old also.... I have a
DaveMade m-80 i bought about 2 months
ago.....everything is a 9.5 on a scale of 1-10. hehe....10 is new,
nothing is new. I'll take $250 bucks for everything, email me if your
interested
Thatz-me-JP

_
  If that was you I heard on July 4th, I 'd hold on to that
set-up,,it sounded really good.
N3CVJ has one of those Dave-Made M-80 linears, in addition to a Texas
Star. He claimed the Texas Star is much cleaner. If you are having a
"bleed" problem, you may wish to look into purchasing or trading for a
Texas Star, or do some fine tuning and tweaking to get the interference
to a mild roar. Try the process of elimination, stock mic, reduced TX
power, audio, adding a better ground, etc. Good luck whatever you chose.

__
>Hi Twist, JP only posts here when he's

>hawking some noise maker.

I don't care about for-sale posts when they are on topic and related to
the group...some do, I don't mind them. Some are interesting and provide
great debate,,like Grif's Skywave. I would most definitely buy from a
reg on here as opposed to a one-shot spammer. Word of mouth on this
group has led to some great introductions (which in turn led to several
friendships being formed), and business referrals and even the most
silent sandbagger now has a clue who is cool to do business and who
isn't.

>BTW, how's the fishing going down there?

>--

>GO# 40

>---
  The sport fishing hasn't been bad,, in fact, shark fishing has
been great, but the weather has been terrible...really bad. Small craft
warnings several days in the last two weeks....makes for plenty of wet
inshore and river activity. Plenty of Bull Sharks being caught just
beyond the furthest cast from shore. I took a radio bud from NH to a

local fishin' spot when he was in the Bay area,,,several Bulls, all 5 foot and above, were caught last weekend from that location, approximately 40 to 50 yards from shore, in less that 6 feet of water, between 5:00 PM and 11:30 PM with a water temperature of 88 degrees and an air temp of 92. Barometer was rising like mad.
With the walls of water coming down frequently and heavily,...you oughtta see my yard....needs cut every 4 or 5 days!!

Source record: 162659

: Frank Gilliland <sparky@nospamaimcomm.net> wrote:
: Too many people are preoccupied with RF power; i.e, WATTS. What they don't
: realize is that the MODE of operation is far more important than power...

What many of the technical heads don't realize is the simplicity of AM
mode for the average joe. The average arm chair CB person doesn't want to
crank a clarifier knob in SSB operation. AM remains popular for the
average CB operation regardless of efficieny issues.

: AM (Amplitude Modulation) is composed of three parts: The carrier, the lower
: sideband and the upper sideband. The carrier stays constant while the sidebands
: vary in power according to the modulation. When a 4 watt carrier is modulated to
: 100%, there will be 1 watt transmitted in each sideband, for a total of 6 watts
: of RF power that is being transmitted. But the voice can't modulate the carrier
: to 100% all the time -- speech does not have a constant amplitude. Average
: modulation is usually somewhere around 30%, so the average RF power that is
: transmitted is closer to 4.6 watts.

Modulation percentage & duty cycle.

In the real world, one must consider the radio service, operator and
equipment. Speech processing (power mics into proper mic limiter
circuits as an example) and background noise can lead to modulation
percentages greater than 30%. You should qualify your statement to say
something like the typical human voice might modulate an unprocessed AM CB
about 20 to 30% on average. Throw in a typical power mic or some type of
speech processor box (like the Heil type of of radio equipment) and that
all goes out the window.

[cut and paste a little bit of good theory]
With 100-percent sine-wave modulation, a transmitter produces 1.5
units of RF power. The additional 0.5 unit of power is furnished by the
modulator and is distributed equally between the two sidebands. This AM
transmitter is compared with an SSB transmitter rated at 0.5 unit of
peak-envelope power (PEP). Peak-envelope power is defined as the RMS power
developed at the crest of the modulation envelope.

Many of these rec radio cb technical posts fail to mention the source of
the additional power which is furnished by the modulator.

: Now AM works fine if you don't mind wasting power.

Most people prefer to trade the "wasted power" for the simplicity of AM
operation. Kind of the SUV of radio thing... just lacking the dam cell
phone planted in your ear as you drive along.

: But SSB has another advantage: Because it only uses one sideband, it uses half
: the bandwidth of AM (6 KHz for AM vs 3 KHz for SSB). That means it receives half
: the noise of AM, thereby doubling the all-important signal-to-noise ratio, and
: effectively doubling the power of the transmitted signal.

Lets add some more real information.

When the RF signal is demodulated in the AM receiver an audio voltage develops which is equivalent to the sum of the upper- and lower-sideband voltages, in this case 1 unit of voltage. This voltage represents the output from a diode detector as normally used for AM reception. Such detection is called coherent detection because the voltages of the two sidebands are added in the detector.

When the RF signal is demodulated in the SSB receiver, an audio voltage of 0.7 unit develops which is equivalent to the transmitted upper-sideband signal. If a broadband noise level is chosen as 0.1 unit of voltage per 6 kc bandwidth, the AM bandwidth, the same noise level is equal to 0.07 unit of voltage per 3 kc bandwidth, the SSB bandwidth.

These values represent the same noise power level per kc of bandwidth, that is, 0.12 divided by 6 is equal to 0.072 divided by 3. The s/n ratio for the AM system is 20 log s/n in terms of voltage, or 20 dB. For the SSB system the s/n ratio is also 20 dB. Therefore the 0.5 power unit of rated PEP for the SSB transmitter produces the same signal intelligibility as the 1 power unit of rated carrier power for the AM transmitter .

In summary it can be stated that, under ideal propagating conditions but in the presence of broadband noise, an SSB signal and an AM signal provide equal s/n ratios at the receiver if the total sideband power contained in each of the signals is equal. This means that, to perform under these conditions as well as an SSB transmitter of given PEP rating, an AM transmitter requires twice that figure in carrier power rating.

: All summed up, a stock CB with SSB has the same range and talk-power as
: the same CB using AM with a 100 watt linear -- and it's LEGAL!

I don't agree, but you be your own judge. Also those of you nit pick types notice the mention just above "stock CB". It's a big deal when assuming modulation percentages and duty cycle. Throw a typical power mic into the mix and the big picture quickly changes.

Many CB'ers use power mics, most AM (and FM) Broadcasters use heavy Audio processing. A science unto itself which is also an it's own industry.

Your results will probably vary...

cheers

skipp

Back when the Party Pirate reigned supreme on Tampa Bay's underground airwaves, I received the best advice ever, practically straight from the horses mouth.."If you have a license from the FCC, allow it to expire. If you don't have one, don't get one. If you have a family, stop what you're doing. If you live in fear, this is not for you. The only way a pirate operator (FM Commercial Band) remains safe, is to keep them guessing as to your identity." Regarding such activities, truer words have never been spoken. This was at a symposium sponsored by a certain Federal watch-dog group. It appears the words ring true concerning DX on cb, also. Never know when the hammie that claims "It's my right to enforce whatever law I see fit" is going to become pro-active instead of reactive.....he just may turn ya' in after a disagrement on 2 meter where ya' dared correct him in front of others.

>Ok, I apologize for my response to you.

No problem. It did make me think (ouch!), and because of that I came up with the
following 'quick' explanation of the difference between the CB's modes of AM and
SSB:

The average RF power transmitted by AM is about 4.7 watts, but 4 watts are
wasted in the carrier, and half of the remainder is redundant. The average RF
power transmitted by SSB is about 4 watts, and wastes nothing at all.

Accurate?

The problem here is that AM PEP is not a simple sum. For example, if you start
with 16 watts PEP (100% mod) and subtract the 4 watt carrier then you are left
with 12 watts that must be split between two sidebands. So each sideband should
have 6 watts, but that's wrong because we already know that each sideband has
only 1 watt. That is also the reason why carrier and modulation must be measured
seperately with AM power -- because it's not simple addition.

So what do you think power output of a average legal SSB CB is? 12
Watts?

1137. Re: Ch 21 crystals needed Johnson Messenger

Just an unsolicited recommendation: I have bought CB crystals from Ken's Electronics for many radios (Pearce Simpson Simba, SBE Trinidad II, Pearce Simpson Bengal, etc.), and I've never received a bad crystal from Ken's. Prices and shipping are very reasonable also.

73,
David

>average CB operation regardless of efficieny issues.

I don't think it's a matter of the adjustment of one knob, since people seem to
get their kicks out of having lots of knobs on their radios. I think it's more
about the cost of the radios. You can pick up an AM rig at any flea market for
pennies; but a working SSB rig, new -or- used (that hasn't been butchered), will
cost you a few bills.

>: AM (Amplitude Modulation) is composed of three parts: The carrier, the lower
>: sideband and the upper sideband. The carrier stays constant while the sidebands
>: vary in power according to the modulation. When a 4 watt carrier is modulated to
>: 100%, there will be 1 watt transmitted in each sideband, for a total of 6 watts

>Modulation percentage & duty cycle.

Duty cycle is irrelevant since there is no modulation percentage to be measured
when the radio isn't transmitting.

>In the real world, one must consider the radio service, operator and
>equipment. Speech processing (power mics into proper mic limiter
>circuits as an example) and background noise can lead to modulation

I took the peak-to-average modulation ratio from the ARRL handbook (as well as
several other textbooks). Take up your argument with it's author.

>[cut and paste a little bit of good theory]
>With 100-percent sine-wave modulation, a transmitter produces 1.5

If the "additional 0.5 unit of power" is distributed equally between the two sidebands, don't you mean 0.25 unit for a single sideband?

> Peak-envelope power is defined as the RMS power
>developed at the crest of the modulation envelope.
>
>Many of these rec radio cb technical posts fail to mention the source of

>detection is called coherent detection because the voltages of the two
>sidebands are added in the detector.

Holy Smoked Oysters, Skip! That's called "envelope detection" and has nothing to do with sidebands! And the "coherer detector" was an ancient method of detection that was used long before tubes, even before galena crystals! It used iron filings that magnetized and 'cohered' to each other under modulated RF currents, changing the overall resistance with the modulation. You are WAY, WAY out in yonder pasture with THAT one, Skip.

>When the RF signal is demodulated in the SSB receiver, an audio voltage
>of 0.7 unit develops which is equivalent to the transmitted
>upper-sideband signal. If a broadband noise level is chosen as 0.1 unit

>of voltage per 6 kc bandwidth, the AM bandwidth, the same noise level is
>equal to 0.07 unit of voltage per 3 kc bandwidth, the SSB bandwidth.

A bit obtuse, but ok....

>These values represent the same noise power level per kc of bandwidth,

Wrong. Noise voltage level is NOT noise power level, the latter being the sum of all the noise within the bandwidth. Narrowing the bandwidth does not reduce the noise voltage level but it DOES reduce the noise power level, and it does so in direct proportion to the bandwidth. IOW, cut the bandwidth in half and you cut the noise power level in half.

<snip faulty explanation based on your lack of understanding>

I believe it is in the same family as several similar radios including the Eagle Sidewinder 400 which I recently purchased.

I am very happy with it.

I know someone who bout the Pro Star 400 then sold it to a friend.

The Eagle has a simple jumper setting which enables ten bands of 40 channels as well as +5KHz and -5KHz.

It may actually be closer to the Magnum 257. The mod link on Bill's 2 Way site sends you to the Magnum 257 page.
http://www.bills2way.com/modification/magnum_257_mod.html

It says "This modification applies to the Titan II RPSY-485 as well as the Magnum 257, 357, 457, and the Superstar 4900 Mobile, and Pro-Star 400 Mobile.".

Personally I like it a lot better than my Galaxy 2100. It is small and works great. The Galaxy seems to require a lot more fidgeting, or maybe I just do it because it has a lot more to play with.

What I don't get are the "A" channels as they are called. It doesn't have a +10KHz switch like the Galaxy and some other radios.

I also have a similar radio, the Radio Shack TRC-485 which I moded to access the extra channels. The only problem is the VCO in the 485 is not broadband so it can only transmit on about 150-160 channels.

I am currently running a mobile D104 mic with the radio going through a small amp into a Valor Half Breed mag mount antenna. It's a great setup.

Here is a link to a frequency table which includes the Pro Star 400.
http://cbshop.webtrix.net/freq-chart-master.htm

>
> T.G.

Any indoor antenna is limited as to range, and a combo
AM/FM/CB car antenna also sucks. Combine the two factors,
and you will regret the money you spent.

27 MHz does not carry well with small or short low antennas.
If you can't use a rooftop antenna on your house, and a decent
magmount on the car, you should look into MURS (VHF) for a
local solution. MURS' proximity to 2 meters allows for a
wide range of ready-made antennas with little or no tuning.
(Shorter, too, as 27 MHz is 8.5 feet for a 1/4 wave and 151
MHz is about 18.5 inches for a 1/4 wave.)

Hell with it all ,LETS go to the FM mode.
No BS about PEP, Just plain power, no linear amp required. No clipping of the modulation diodes and screwing up the radio. No forward swing or splatter,
Oh that's right if it sounds good, and does not fuck up the radio it couldn't be a CB radio. Service techs would not like it also as they would have nothing to do to except to screw them up.

They have done it in Europe on CB why not here.
Sounds much better, cuts most of the multi carrier wine out, and all the other services have done it since the 1940s. I guess we are stuck with the AM mode, that sucks.
OK, OK I know its wider in the required bandwidth, SO.

I agree....

Most FRS units I have seen are restricted to 500mW or 1/2 a watt.
Good for a picnic or at the ski hill. If you are a radio enthusiast
and want to speak to people around town or further, better stick to CB
or amateur boxes....

I have yet to partake in the lid game of reposting old posts out of the blue, but I feel Dave and Dougie's cojoined allegiance and the consisten love they have direct toward myself lately dictates such. One of my faves....

_
I take offense to the "holer than thou" attitude displayed by many hams toward Cbers. They flaunt their "superior equipment" and tell the CBers, to get ham licenses, and then are the first to complain to their ham buddies, that the reason the ham bands are going to pot, is because of all the CBers that are moving up there.
Ham radio and CB radio are both communications services. Both offer their respective users with a forum for enjoyment. Each service has it's own unique appeal that is not duplicated on the other. Ham radio is full of serious discussions and one can learn alot from just listening. On the other hand though, a constant diet of technobabble gets VERY boring fairly quickly. CBers are less technical, and as a result, are more like talking to "regular" people. Topics are more varied, and you can "fool around" without fear of upsetting the "kilocycle kops", and have more fun.

All are.

> Good for a picnic or at the ski hill.

They are actually fairly worthless at a large ski resort. If you are
on the same run, they might work out, but UHF (FRS) doesn't work well
thru trees.

> If you are a radio enthusiast
> and want to speak to people around town or further, better stick to CB
> or amateur boxes....

CB is OK for mobile/base usage, but they are absolutely huge and
totally inefficient in handheld applications... they might work better
than an FRS radio on the ski slope, but they are completely ungainly.

For the skiing application, a "real" GMRS, or MURS radio would be
preferable to FRS for performance reasons or CB for size reasons, and
a modern miniature 2m ham handheld would be the ideal solution for
both size and performance reasons.

A real GMRS radio on the same frequency range will not do much better then
an FRS radio. Height, antenna and power makes more of a difference in decreasing
amounts in that order.

Source record: 162711

: Frank Gilliland <sparky@nospamaimcomm.net> wrote:
: I don't think it's a matter of the adjustment of one knob, since people
: seem to get their kicks out of having lots of knobs on their radios. I
: think it's more about the cost of the radios. You can pick up an AM rig
: at any flea market for pennies; but a working SSB rig, new -or- used
: (that hasn't been butchered), will cost you a few bills.

AM vs SSB operation for the average evening arm chair talker (not living
in a congested area) is probably going to be based a lot on simplicity and
fidelity. The reduced bandwidth of an SSB signal is not as plesant to the
ear for some people. Add that with the clarifier knob requirement of SSB
round table group chat and AM remains popular. One must consider the
practical part of radio operation after they've spent the money.

:>Modulation percentage & duty cycle.
: Duty cycle is irrelevant since there is no modulation percentage to be
: measured when the radio isn't transmitting.

Hard to have one without the other... all the given examples were of a
transmitted signal.

: I took the peak-to-average modulation ratio from the ARRL handbook (as
: well as several other textbooks). Take up your argument with it's author.

There is no argument, but many reference values are thrown out by various
texts based on many qualifiers. Said qualifiers should probably be
mentioned in various examples. Older texts I've seen often throw out the
20% number.

:>[cut and paste a little bit of good theory]
:>With 100-percent sine-wave modulation, a transmitter produces 1.5
:>units of RF power.

: ...."units"?

Yep, when no specific description is used, units work very well. Kind of
like the unit circle often described in mathematics "with a radius of 1."
Should be rather intuitive to most people...

:> The additional 0.5 unit of power is furnished by the
:>modulator and is distributed equally between the two sidebands. This AM
:>transmitter is compared with an SSB transmitter rated at 0.5 unit of
:>peak-envelope power (PEP).

: If the "additional 0.5 unit of power" is distributed equally between the two
: sidebands, don't you mean 0.25 unit for a single sideband?

Same thing isn't it..? wait a minute... you used "unit" Frank... see
how well that works. :-)

:>Many of these rec radio cb technical posts fail to mention the source of
:>the additional power which is furnished by the modulator.
: I didn't. Read my post again.

No one said you did... though as stated "many" people have.

:>Most people prefer to trade the "wasted power" for the simplicity of AM
:>operation. Kind of the SUV of radio thing... just lacking the dam cell
:>phone planted in your ear as you drive along.

: And I prefer to believe that "most people" are uneducated as to the
: benefits of SSB, which is why I wrote that post.

Many people have SSB mode and prefer the simplicity of AM operation. "Life
is box of chocolatte." Sometimes the technical candy is a hard chew.

:>When the RF signal is demodulated in the AM receiver an audio voltage
:>develops which is equivalent to the sum of the upper- and lower-sideband
:>voltages, in this case 1 unit of voltage. This voltage represents the
:>output from a diode detector as normally used for AM reception. Such
:>detection is called coherent detection because the voltages of the two
:>sidebands are added in the detector.

: Holy Smoked Oysters, Skip! That's called "envelope detection" and has
: nothing to do with sidebands! And the "coherer detector" was an ancient
: method of detection
: that was used long before tubes, even before galena crystals! It used iron
: filings that magnetized and 'cohered' to each other under modulated RF currents,
: changing the overall resistance with the modulation. You are WAY, WAY out in
: yonder pasture with THAT one, Skip.

For the example, compare the described coherent detection to envelope
detection. In the classic example are they not similar..?

:>When the RF signal is demodulated in the SSB receiver, an audio voltage
:>of 0.7 unit develops which is equivalent to the transmitted
:>upper-sideband signal. If a broadband noise level is chosen as 0.1 unit
:>of voltage per 6 kc bandwidth, the AM bandwidth, the same noise level is
:>equal to 0.07 unit of voltage per 3 kc bandwidth, the SSB bandwidth.

: A bit obtuse, but ok....

The actual word you should have used is "accurate."

:>These values represent the same noise power level per kc of bandwidth,

: Wrong. Noise voltage level is NOT noise power level, the latter being the sum of
: all the noise within the bandwidth. Narrowing the bandwidth does not reduce the
: noise voltage level but it DOES reduce the noise power level, and it does so in
: direct proportion to the bandwidth. IOW, cut the bandwidth in half and you cut
: the noise power level in half.
: <snip faulty explanation based on your lack of understanding>

Convenient that you cut out the entire example... no one wrote that noise voltage is noise power... notice the word "represent" Frank.

Also notice the example has values worked through to demonstrate the signal intelligibility. Are any of those values or the end result summary wrong Frank..?

The desciption and the summary are accurate.

How about you plugging in a similar example and going through it here on the news group.

: Overmodulation is next week's lesson.

Let's get this one done first...

Message-ID: <27379-3F185324-344@storefull-2313.public.lawson.webtv.net>
Source record: 162718

From: soaponarope@yahoo.com (Skipp)
Twistedhed <twistedhed@webtv.net> didn't write, but paraphrased N3CVJ: I take offense to the "holer than thou" attitude displayed by many hams toward Cbers.

>I have not found that to be the case...

Neither have I. What you mis-attributed to myself was paraphrased. Dave Hall N3CVJ wrote it, not I. That is why his signature, that you somehow managed to snip and eliminate, was at the bottom. See, he signed it....

>Dave

>N3CVJ@N3CVJ.#EPA.PA.USA.NA

>dhall@gic.gi.com

How you missed it or chose to ignore it and misattribute Dave Hall's words to myself is anyones guess, but not really important.

–

(They flaunt their "superior equipment" and tell the CBers,)

–

>Many serious CB'ers run Amateur Gear.

Agreed.

–

(to get ham licenses, and then are the first to complain to their ham buddies, that the reason the ham bands are going to pot, is because of all the CBers that are moving up there.)

–

>Many ham friends were cb friends from days

>of old. I'm glad they became more interested

>in the hobby.

Again, agreed.

–

(Ham radio and CB radio are both communications services. Both offer their respective users with a forum for enjoyment. Each service has it's

own unique appeal that is not duplicated on the other.)

–

>Depends on what part of the hobby your are

>writing about.

Only the writing wasn't mine, it was Davie's..

–

(CB and Ham Radio operation have many similar aspects.
Ham radio is full
of serious discussions and one can learn alot from just listening. On
the other hand though, a constant diet of technobabble gets VERY boring
fairly quickly.)

–

>Have you been on a ham band lately..?

>Taste's great..!

I think hammies that make posts like this are too concerned with cb and
disenfranchised with hammie radio. They spend all their time here in a
cb room but can claim communication with no other group member. Just as
it has been shown certain factions are not at all interested in the
rules, despite their hypocrisy toward cbers, some are interested in
advocating nothing but an agenda of hate and discontent..

>but is much less filling on the serious

>discussion side. Most Hams don't sit and talk

>technical all day long, they are just regular

>people for the most part.

Agreed. As you so astutely pointed out, "most" hammies do not share the
minority point-of-view illustrated by the author.

–
(CBers are less technical, and as a result, are more like talking to
"regular" people. Topics are more varied, and you can "fool around"
without fear of upsetting the "kilocycle kops", and have more fun. Dave
)

–

>I've never met a kilocycle kop or anything like

>one.

I would surmise he meant those who try to police others. In other words,
he was referring what he has become. If I am incorrect, you can ask
Davie to what he referred when he used such a term.

_
>I know a lot of very technical CB'ers who have

>no interest in Amateur Radio. I know a lot of

>very non technical hams.

>If you listen to both the CB and Amateur

>Bands, you mostly hear a lot of fooling around.
>Makes things much more interesting...

>cheers

>skipp

_
No doubt. And it's much easier to communicate in a friendly manner,
despite the fact that the person you are communicating with may share
opposing views.

SSB has the same audio bandwidth as AM, but SSB has less noise. For fidelity,
SSB has AM beat.

> Add that with the clarifier knob requirement of SSB
>round table group chat and AM remains popular.

I haven't had to move my clarifier in quite a while, mainly because most of the
people I talk to are using radios that haven't been modified.

> One must consider the
>practical part of radio operation after they've spent the money.
>
>:>Modulation percentage & duty cycle.
>: Duty cycle is irrelevant since there is no modulation percentage to be
>: measured when the radio isn't transmitting.
>
>Hard to have one without the other... all the given examples were of a
>transmitted signal.

Duty cycle is the ratio of transmit time to receive time. Modulation percentage
doesn't use receive time as a factor.

>: I took the peak-to-average modulation ratio from the ARRL handbook (as
>: well as several other textbooks). Take up your argument with it's author.
>
>There is no argument, but many reference values are thrown out by various
>texts based on many qualifiers. Said qualifiers should probably be

>20% number.

Power microphones, audio processors, modulation limiters... things that change
the peak-to-average modulation ratio... all will be discussed soon.

>:>[cut and paste a little bit of good theory]

>: benefits of SSB, which is why I wrote that post.
>
>Many people have SSB mode and prefer the simplicity of AM operation. "Life
>is box of chocolatte." Sometimes the technical candy is a hard chew.

I didn't say they are Gumps, I said they are uneducated about the benefits of
SSB. And I should rephrase that: "Many CBers are UNDER-educated about the
benefits of SSB."

>:>When the RF signal is demodulated in the AM receiver an audio voltage
>:>develops which is equivalent to the sum of the upper- and lower-sideband
>:>voltages, in this case 1 unit of voltage. This voltage represents the
>:>output from a diode detector as normally used for AM reception. Such
>:>detection is called coherent detection because the voltages of the two

>:>sidebands are added in the detector.
>
>: Holy Smoked Oysters, Skip! That's called "envelope detection" and has
>: nothing to do with sidebands! And the "coherer detector" was an ancient
>: method of detection

>: filings that magnetized and 'cohered' to each other under modulated RF currents,
>: changing the overall resistance with the modulation. You are WAY, WAY out in
>: yonder pasture with THAT one, Skip.
>
>For the example, compare the described coherent detection to envelope
>detection. In the classic example are they not similar..?

No, they aren't similar at all, because I have never heard of a detection scheme where the "voltages of the two sidebands are added in the detector". Care to reference that one?

Time for another lesson: You can look at AM in two ways. One way is in the frequency domain, with a carrier of constant amplitude and the modulation carried in the sidebands. The other way is in the amplitude domain, in which the carrier varies in amplitude according to the modulation (which is where the term "Amplitude Modulation" originated). Envelope detection works in the amplitude domain by passing the rectified RF or IF signal through a low-pass filter. And in case you didn't notice, a diode detector blocks half the modulation power!

>:>When the RF signal is demodulated in the SSB receiver, an audio voltage
>:>of 0.7 unit develops which is equivalent to the transmitted
>:>upper-sideband signal. If a broadband noise level is chosen as 0.1 unit
>:>of voltage per 6 kc bandwidth, the AM bandwidth, the same noise level is
>:>equal to 0.07 unit of voltage per 3 kc bandwidth, the SSB bandwidth.
>
>: A bit obtuse, but ok....
>
>The actual word you should have used is "accurate."

The description is accurate in fact but not in reason.

>:>These values represent the same noise power level per kc of bandwidth,
>
>: Wrong. Noise voltage level is NOT noise power level, the latter being the sum of
>: all the noise within the bandwidth. Narrowing the bandwidth does not reduce the
>: noise voltage level but it DOES reduce the noise power level, and it does so in
>: direct proportion to the bandwidth. IOW, cut the bandwidth in half and you cut
>: the noise power level in half.
>: <snip faulty explanation based on your lack of understanding>
>
>Convenient that you cut out the entire example... no one wrote that
>noise voltage is noise power... notice the word "represent" Frank.

All right, if you really want:

>These values represent the same noise power level per kc of bandwidth,
>that is, 0.12 divided by 6 is equal to 0.072 divided by 3.

Where did you get the values of 0.12 and 0.072? Regardless,

0.12 / 6 = 0.02
0.072 / 3 = 0.024
0.02 <> 0.024

> The s/n ratio
>for the AM system is 20 log s/n in terms of voltage, or 20 dB. For the
>SSB system the s/n ratio is also 20 dB.

Again, where did you get your values of 0.12 and 0.072?

Time for ANOTHER lesson: The intelligibility of an audio signal is defined by the signal-to-noise ratio of the audio, which is done by measuring the POWER of the signal and noise, NOT just their voltage. Why? Because sound requires POWER. Simple, huh? Also, when determining the S/N ratio at the RF input of a receiver, the signal and noise are measured as VOLTAGE because the input impedance is common to both.

> Therefore the 0.5 power unit of
>rated PEP for the SSB transmitter produces the same signal
>intelligibility as the 1 power unit of rated carrier power for the AM
>transmitter .

Your "1 power unit of rated carrier power" doesn't carry any intelligence. But I know what you are trying to say, and you're still wrong. Your detection-adder scheme doesn't work here because, even if such a detector existed, the RF noise would be detected by the same process, negating the effect you are claiming actually occurs.

>In summary it can be stated that, under ideal propagating conditions but
>in the presence of broadband noise,

...which is a contradition in terms...

> an SSB signal and an AM signal provide
>equal s/n ratios at the receiver if the total sideband power contained in
>each of the signals is equal.

Only with your sideband-adding detector.

> This means that, to perform under these
>conditions as well as an SSB transmitter of given PEP rating, an AM
>transmitter requires twice that figure in carrier power rating.

Even if that were true (and it isn't), SSB is still more efficient than AM.

>Also notice the example has values worked through to demonstrate the
>signal intelligibility. Are any of those values or the end result
>summary wrong Frank..?

Your values are not "worked through". It's like you pulled them out of thin air. Where did you get your values of 0.12 and 0.072?

>The desciption and the summary are accurate.
>
>How about you plugging in a similar example and going through it here on
>the news group.

How about you learning the concepts before making invalid examples? How about assigning proper labels to your arbitrary values instead of generic "units"? How about not skipping steps to hide your mathematical mistakes?

>: Overmodulation is next week's lesson.
>
>Let's get this one done first...

As far as I'm concerned, it's done. The only problem here is that you don't fully understand the concepts involved. Demonstrate that you have learned something and I'll move on.

Sup all..... I thought I would try and bring this board back to its former glory by posting a real question about what we all care about..... POWA!!!!!

Wooo-hoo!! Yesterday was like friggin Christmas for me!! Heres what happened...

It was about 93 degrees and I decided to move my truck into the shade here at work. So I go out and key up real quick to let all my mudducks know that Daddy's home. So one of the local-talkers keys up and says... "Hey Ninja.... I'm sellin all my stuff right now, you want those Skullcrackers? I'll take 450 for the 2 pill and the 4 pill."

Well needless to say I told him "Dont get rid of them!!!" And proceeded to try and find a way to get some cash quick. After that says the magic words. "You got anything to trade?"

Heres what I traded to him:

Green-face Galaxy 88 with chrome covers,
Texas star 500v
ECS Motherboard (For Puter)
And an Athlon XP2000 processor.

Heres what I got:

Brand new never been used Mr. Coily double coil,
a New 1300 CCA Tractor battery. (This thing is the size of 3 marine batteries)
2-Pill Skullcracka
4-Pill Skullcraka
New voltmeter.

Needless to say I am pretty stoked... Skullcracka's dont come aound for sale too often, and ordering one can be tough if Prime is on tour. Now for my question:

I understand that Skullcracka's can take an insanely high deadkey and do great. What is the most I should be putting into my 4-pill from my 2-pill? Should I just experiment and watch the match/heat?

Any advice before I hook this up in my mobile? Ive already been running it at home off my garage battery.

Thanks,

Ninjaman808
NWCorner

Most FRS radios ERP is much less than .5 W.

Most Motorola FRS radios, 63XX and 62XX, are running a little over .3
WERP. The T6400 in high power mode outs out .434 WERP.

The new Motorola T4500 has an output of .180 WERP on GMRS frequencies
and .190 WERP on FRS.

Mike

So how much power will it do? 600 watts? Maybe 800 watts if you overvolt? You do know that rating is PEP, don't you? That translates to only a 240 watt carrier (deadkey) in AM before you splatter. You can get the same "POWA" by using just 60 watts in SSB. "Wooo-hoo!!"

>
>Any advice before I hook this up in my mobile? Ive already been
>running it at home off my garage battery.

Yeah -- get your stuff back and run the Galaxy in SSB with the Texas Star. Then put your computer back together and sell it so you can afford a decent audio processor.

1201. SB-72 Manual

Newsgroup: rec.radio.cb
Date: 2003-07-19 01:49:33 UTC
From: Jay Mojave <jay123a@net.com>
Message-ID: <3F18A3AD.5000201@net.com>
Source record: 162735

Hello All:

Looking for a General Radiotelephone SB-72 Manual / with the schematic Diagram.

The SB-72 is a old tube type 23 channel CB radio, that has SSB and AM. Operators that bought and used those great old radios liked to drink cold Beer, drive fast, whistle at girls, drag race, shoot rabbits, shoot skip, no dought one of the leading Mojave Desert Flame Throwing contest contestants, and Rock n Roll fans!

Thanks

Jay in the Great Mojave Desert. (110 Degree's F)

Another correction (it's getting late):

800 watts PEP = 200 watts carrier (deadkey).
200 x 45% = 90 watts (bandwidth s/n adjustment)
90 x 0.25 = 22.5 watts PEP SSB

Hell, the Galaxy can do 25 watts SSB all by itself, right? You got ripped!

To learn the technical TRUTH about CB Radio without all the hype from people who are just plain ignorant, check out the following books from CBC International. They're selling right now at a big discounts on our EBAY & AMAZON stores too.

Check it out!

To see exactly what these books look like, plus all the specific, chapter-by-chapter details, see our Web at:

www.cbcintl.com

Some of the books included are:

BOOK #1: THE "SCREWDRIVER EXPERT'S" GUIDE To Peaking Out & Repairing CB Radios. List $25. The most popular "big dummy's" guide ever published on do-it-yourself CB repairs & modifications. Covers peaking of receivers, transmitters, modulation, mike problems, antenna & SWR problems, detailed frequency modifications for both crystal & PLL radios. Loaded with charts, illustrations, and specific instructions for most brands including the new export models. This latest edition also covers slider and broadbanding tricks, FM conversions, and much more!

BOOK #2: THE CB PLL DATA BOOK. List $20. The only complete reference source on CB PLL synthesizer circuits ever published! Detailed PLL theory explained in layman's terms. How they work, and how to modify them for many more channels. Includes specific PLL block mixing diagrams, truth charts, & IC pin function diagrams for nearly every PLL chip ever used. Covers all the most popular U.S. & export chassis, with specific listings of all models using the chip.

BOOK #3: UNDERSTANDING & REPAIRING CB RADIOS. List $42. Giant 370-page technical book for the professional repairman. Picks up where the "SCREWDRIVER EXPERT'S" GUIDE leaves off. Includes circuit descriptions & troubleshooting guide for 23- & 40-Ch., crystal & PLL, solid-state & tube, AM, FM, SSB, CW, American & export models. Covers test equipment (& where to find it), transistor basics, synthesizers, receivers, transmitters, power supplies, T/R switching, antennas, interference, parts & accessory sources. Over 350 illustrations including schematics, charts, and photos. Huge subject index also lets you look up repairs by symptoms. This is "must" reading for any serious CB technician!

For details on our Galaxy-Ranger Service Manual (2nd Ed.) go to:

www.cbcintl.com/galaxy.htm

****
Who are we? Since 1976, we've been THE source for CB Radio
technical information & high-performance CB accessories!

Trying to fix a mike, or wire a new mike or power mike? Can't figure out which mike socket pin(s) and wires are which? Plagued by RF feedback squeal? Check out our FREE mike wiring guide. Everything you need to know on the subject! Follow this link:

www.cbcintl.com/docs/mikewire.htm

We specialize in CB books, plans, kits, and high-performance CB accessories. Please visit our Web site to see all those "goodies" you just can't find anywhere else!

www.cbcintl.com

You can also download our complete CB catalog, or just the Order Form from the home page. We've also got a new Email Order Form (for VISA/MC) if you're in a hurry.

* *
In case you didn't already know...

Who are we? Since 1976 we've been the leading supplier of books, plans, and kits just for CB radio. Do-it-yourself repairs and modifications, 10-Meter Ham conversions, amplifiers, FM converters, bleedover filters, adding new frequencies, etc. Secrets of how to increase your power, range, and privacy.

For product questions or additional details
on what we offer, please email us directly at:

I triple-checked it, but I'll check again just to be sure:

If a 4 watt AM carrier is 100% modulated, the PEP is 16 watts; therefore, a 200 watt AM carrier will modulate up to 800 watts PEP -- Check!

If a 4 watt AM carrier is 100% modulated, the power in each sideband is 1 watt; therefore, a 200 watt AM carrier will have 50 watts in each sideband -- Check!

SSB requires only 45% of the bandwidth of AM; therefore, a received signal from an AM transmission with 50 watt sidebands has the same signal-to-noise ratio as if it were an SSB transmission of 22.5 watts PEP -- Check!

Therefore, an SSB transmitter with a PEP rating of 22.5 watts is equivalent to an AM transmitter with a PEP rating of 800 watts -- Check!

Looks right to me, Jay!

Yea, they became that way when they were cbers and never managed
to improve themselves, even after getting a ham license. Old
habits are hard to break.

Greetings,
I'm installing a Uniden Grant CB with SSB and a 300 Watt Linear. I will be using Dual Antennas. The CB will be mounted in the headliner and the Linear under the Driver's seat. The Coax will have to be at a minimum of 10 feet from CB to Linear and a minimum of 10 feet from Linear to the Dual Antennas. Any recommendations on the lengths of Coaxes or anything about this setup.
Please send your reply to shifferg@bellsouth.net . Thanks for your time in this matter.
Sincerely,
Jerry

200 watts carrier modulated 100% by 100 watts audio = 50 watts peak in each sideband.

I wonder if anyone has had a stereo preamp where they had the preamp gain way to high and the sound is highly distorted, even if turned down low? I've heard it in nightclubs. This happens with RF devices too ...

Amateur Radio Newsline™ Report 1353 – July 18, 2003

Amateur Radio Newsline report number 1353 with a release date of Friday, July 18th 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T.

WRC 2003 says no more Morse but it may be years before codefree operation comes to the USA. Find out why on Amateur Radio Newsline report number 1353 coming your way right now.

(Billboard Cart Here)

**

INTRODUCTION

G’day and welcome to the first Amateur Radio Newsline report ever recorded in Australia. I’m this weeks host Graham Kemp, VK4BB, at the Q News studios in the city of Brisbane. And our first story as you might expect has to do with WRC 2003.

**

WRC FALLOUT: S.25 AND A CODEFREE USA

The now concluded World Radiocommunications Conference may have rule that Morse Code is no longer a world standard for getting a high frequency ham license, but don’t expect it to disappear very quickly in the USA. That’s because there’s lots to be done by Congress and the FCC before any action can or will be taken. Our team coverage starts here:

--

I’m Bruce Tennant, K6PZW in Los Angeles.

The International Telecommunication Union has dropped the international requirement that amateurs operating below 30 MHz must first pass a Morse code exam. According to the CQ website, this was among several actions related to amateur radio taken by the World Radiocommunication Conference and reported by the International Amateur Radio Union. The change took effect on July 5.

According to the IARU, the new language of International Radio Regulation Article 25.5 now reads: "Administrations shall determine whether or not a person seeking a license to operate an amateur station shall demonstrate the ability to send and receive texts in Morse code signals."

This leaves the question of requiring a code test optional for each government licensing authority. According to an IARU explanation, several countries still

feel the code is important as a license requirement and wanted to be sure that any country dropping it did so via what it called a positive decision not to require Morse.

In the United States, FCC rules continue to require passage of a 5 word-per-minute code test for access to the amateur bands below 30 MHz, although it is widely expected that opponents of the code requirement will quickly file petitions with the FCC to drop it.

How long will it take? Amateur Radio Newsline's David Black, KB4KCH, has that part of the story from our South East bureau in Birmingham Alabama.

--

Nobody can be quite certain when or even if the Morse requirement will disappear in the United States, but here's the way it has to play out thanks to the way our government works.

Since the agreements reached at WRC '03 are essentially an international treaty, the document has to be ratified by the United States Senate. Depending on their workload, that could happen before years end or it could be put off into the 2004 session or even beyond.

Senate approval has to take place can the FCC begin the process under the Administrative Proceedures Act and issue a Notice of Inquiry. A Notice of Inquirey or N-O-I is the first step in the rule making process to make any change and gives the general public a chance to voice its opinion. And by public we mean every American. Not just ham radio operators.

If there is enough interest shown in going ahead then a Notice of Proposed Rule making will be issued that again invites public comment. This will be followed by another time period for reply comments by those who might have arguments to counter what some initial commenters have to say. Then matter goes to the staff to prepare a Report and Order or Memorandum, Order and Opinion that is circulated to the five Commissioners who run the agency. If they approve, then the change become law on a date specified in the document.

So once again the rhetoric question of how long? Here's our guess. About two years minimum from the time the Senate ratifies the accords, but only if the FCC decides to proceed immediately there after.

Why two years? Well as Fred Maia W5YI of the NCVEC pointed out to us, since Novice Enhancement some two decades ago, just about every major change in the structure of ham radio has taken about two years. Fred is a pretty good Washington watcher and his guess is 2005 at the earliest. But for now, we will all have to just wait and see.

For the Amateur Radio Newsline,. I'm David Black, KB4KCH, reporting. Graham..

--

As we go to air, the ARRL Board of Directors is meeting to discuss the WRC '03 agreement and its impact on the U-S Amateur Service. Next week the

people who give ham radio tests -- the VEC's will be meeting with the FCC to do the same. (IARU, ARRL, CQ, FCC, ARNewsline(tm))

**

WRC FALLOUT: SWITZERLAND GOES 100% NO-CODE

Meantime, Switzerland may be the first country in the world to take advantage of the revised Radio Regulations. According to the website of the Swiss national amateur radio society, the licensing authority there will be writing to all Swiss CEPT Class 2 amateurs to give them "provisional authorization" to immediately start using the High Frequency bands.

Meantime the Radio Society of Great Britain says that nations Radiocommunications Agency has already stated that it will bring in code-free High Frequency licences as soon as it is practical to do so. An announcement will be made as soon as permission is given for United Kingdom Full and Intermediate Class B amateurs to start using the H-F bands. (RSGB)

**

WRC 2003 FALLOUT: IMPROVED EMERGENCY COMMS - WORLDWIDE

Ham radio emergency communications also got a boost at WRC '03. Jeramy Boot, G4NJH, is in Nottingham England with more:

--

Paul Gaskell, G4MWO, the RSGB Radio Communications Voluntary Services National Co-ordinator, has pointed out the enhancements to amateur radio emergency communications that have come about due to the revision of Article 25 of the ITU Radio Regulations.

Article 25.3 now reads: "Amateur stations may be used for transmitting international communications on behalf of third parties only in the case of an emergency or disaster relief. An administration may determine the applicability of this provision to amateur stations under its jurisdiction."

This is a notable change from the old wording, which was: "It is absolutely forbidden for amateur stations to be used for transmitting international communications on behalf of third parties."

Paul says, "A completely new regulation, Article 25.9A, has been approved, a provision which needs no explanation: It reads: 'Administrations are encouraged to take the necessary steps to allow amateur stations to prepare for and meet communication needs in support of disaster relief.'"

It is hoped that administrations will make regulations that facilitate amateurs preparing for emergency situations and providing communications in emergencies and for disaster relief. This was an important IARU objective.

Jeramy Boot, G4NJH

--

Reports from the 2003 World Radio Communications Conference and its impact on Amateur Radio can be found on the IARU website. Its in cyberspace at www.iaru.org. (RSGB)

THE WAR ON TERROR: FCC ESTABLISHES OFFICE OF HOMELAND SECURITY

The FCC has taken another important step in helping to fight the war on terrorism. This as the agency names James Dailey as Director of the its newly established Office of Homeland Security.

Operating under the Enforcement Bureau umbrella the FCC Office of Homeland Security will deal with many emergency related issues including those involving Amateur Radio. It will also oversee the establishment of an Emergency Relocation Board or E-R-B. The E-R-B will deal with the evacuation of FCC headquarters with little or no advance notice as well as overseeing the relocation of selected FCC staff members. More is on the web at: http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-03-167A1.doc and http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-236436A1.doc (CGC Communicator)

**

RADIO LAW: AB-1228 SIGNED BY GOVERNOR

California hams now have their own PRB-1 “like” protection. This as Governor Gray Davis signs Assembly Bill 1228 on Monday, April 14 th.

Assemblyman Bob Dutton and his staff shepherded the measure through the Local Government Committees and the floors of both houses of the legislature. It eventually passed without a single dissenting vote. The new law officially recognizes the doctrine of Federal preemption as outlined in PRB-1 over Amateur Radio antennas and their support structures as now being California state law.

In his cover letter to the California Legislature, Governor Davis took time to acknowledge the numerous Californians who are licensed amateur radio operators. He said that each year these volunteers give thousands of hours of service to the state and local governments. He added that since the September 11, 2001 attack on America, the state has also have come to rely on them and appreciate their commitment to the security and well being of all those living in the state.

California is the 20th state in the nation to adopt PRB-1 like ham radio anenna legislation. (ARRL SW Div. Bulletin)

**
RESCUE RADIO: RACES VS. FIRES ON THE 4TH
Radio Amateur Civil Emergency Service volunteers acted as dispatchers for the Huntington Beach, California, Fire Operating Center over the July 4th holiday weekend. Operating from the city's Central Net Training Center, eleven members of the towns own Radio Amateur Civil Emergency Service took incoming fireworks related calls from the public, verified addresses, and dispatched the appropriate fire patrol arson investigator teams.
But thats not all. Two communications volunteers were also assigned as spotters on the roof of City Hall. Two other hams got the experience of a lifetime when they lucked out and were attached to the Huntington Beach Police Department eye-in-the-sky helicopter.
Equipped with digital cameras interfaced to two-way ham radio gear, the field team transmitted live slow-scan television images from their lookout locations to the Fire Operating Center and the Huntington Beach Police Department sub-station command post. Glorria Morrison, who is the city's Emergency Services Coordinator said that everyone is proud to have such an extensive network of dedicated and skilled communications volunteers in Huntington Beach. (KH6WZ)
**

RESCUE RADIO: VARACES PULLS OUT OF VA STATE EOC

Meantime, a big change in emergency communications support has taken place in the state of Virginia. Amateur Radio Newsline's Don Wilbanks, AE5DW, has the rest of the story:

--
The tug of war between the independent VARACES Incorporated and the ARRL affiliated Virgina state ARES and RACES group has tipped in favor of the ARRL group. This, according to the latest Repeater Journal that reports VARACES State Emergency Officer Tony Amato, KR4UQ, annouced in March that he and other officers were withdrawing support of operations at the state Emergency Operations Center in the city of Richmond.

VARACES had been providing staffing for the E-O-C since 2001. This following its split from the ARRL after the League's Executive Committee removed Lynn Gahagan, AF4CD, from his post as Virginia Section Manager. Amato, who had been Gahagan's S-E-C cited difficulty in working with the states Department of Emergency Management Operations Director Fred Vincent. Amato claimed that Vincent would not make a clear choice between his group and the ARRL. For his part, Vincent had stated a desire to work with volunteers from both ham radio groups.

For the Amateur Radio Newsline, I'm Don Wilbanks, AE5DW, reporting.

--

Those leaving have been replaced by a ham radio group organized by the local Richmond Amateur Radio Club. (Repeater Journal)

**

OMARC 2003 TECH CLASSES IN SEPTEMBER

Steve Hajducek, N2CKH, says that the The Ocean-Monmouth Amateur Radio Club of New Jersey will again sponsor Amateur Radio Technician theory classes this fall. Classses beginTuesday, September 16th at 6:00pm and will continue through November. All training and testing will be held at the InfoAge Center in Monmouth County, New Jersey. For more information and directions go to www.qsl.net/n2mo on the World Wide Web. (OMARC)

**

NEW FOR HAMS: GLOBAL OVERLAY MAPPER

Tim Makins, EI8IC, in County Roscommon Ireland says that what is perhaps the most comprehensive set of world prefix maps ever assembeled is now freely available. This, in the demonstration version in his new Global Overlay Mapper software.

Makins says that Global Overlay Mapper represents a new concept in the field of maps for radio amateurs. That the software is packed full of features for all Amateur Radio enthusiasts, including seven Continental maps, 27 Sub Continental Maps, country outlines, 2204 maps of major cities C-Q zones, ITU zones, time zones and much more.

The on-line demo-version comes with with two fully featured maps to view. Online purchasing of the whole package is availasble in four major currencies. Download for use on your own computer and try it at www.mapability.com or www.qsl.net/ei8ic (EI8IC)

**

YOUTH RECRUITMENT: SPECIAL OFFER FROM HAMTESTONLINE.COM

The HamTestOnline website has announced its new Youth in Amateur Radio program, which gives eligible school, scouting and youth amateur radio clubs a 50% discount on website subscriptions for students 18 and under.

HamTestOnline says that its offering this discount to support activities aimed at bringing kids into amateur radio such as the ARRL's The Big Project. For more information on the HamTestOnlineT website's Youth in Amateur Radio program, visit www.hamtestonline.com or send an email to K1RV@hamtestonline.com (Press release)

**

FOR YOUR READING PLEASURE: UNDERSTANDING, BUILDING AND USING BALUNS AND UNUNS FROM CQ

If you're interested in how antennas work but don't know an unun from an onion, Understanding, Building & Using Baluns & Ununs from CQ Magazine should be part of your ham radio library.

The new book by Jerry Sevick, W2FMI, is the successor to his earlier work, Building & Using Baluns & Ununs. The new edition includes new tutorial material, designs and explanations of how and why they work. And like its predecessor, this book provides a unique opportunity to learn about the application of these devices to dipoles, Yagis, log periodics, Beverages,

antenna tuners and countless others.

Interested? You can find out more and place your advance order on line at www.cq-amateur-radio.com. Orders may also be placed by phone -- Monday through Friday -- 9 a.m. to 5 p.m. Eastern time at 1-800-853-9797. (CQ)

**

5 MHZ FOLLOW-UP: OPERATING TRENDS DEVELOP

A follow-up now on what's taking place on the new domestic United States 5 MHz allocation. As reported last week, opening night on July 3rd saw many stations making rapid contacts and cooperating together for an enjoyable operating experience. Now, according to noted High Frequency back-pack operator Bonnie Crystal, KQ6XA, the novelty of the 5 MHz channels has settled down to a usable level for calling and QSO's.

Writing to the q-r-zed dot com website Crystal notes that 5 MHz daytime propagation out to 250 miles is good, although summer noise limits the comfort level when working the 50 Watt domestic stations. Nights bring good D-X and regional propagation, but lightning storms tend to make it harsh in some areas.

But her most important observation is that of a very positive trend. KQ6XA says that hams still are acting like they are on their first date, treating the new channels appropriately and showing off their best operating habits. She says that they are observing the kind of brevity in operating procedures commonly used on a high-level VHF repeater or regional linked F-M system.

Crystal adds her hope that in the future 5 MHz will continue to be an example of the best ham radio good operating techniques and behavior. From listening on the air, many others appear to agree. (qrz.com, ARNewsline (tm))

**

INTERNATIONAL - AUSTRALIA: 5TH ANNUAL IARU REGION 3 ARDF GAMES ANNOUNCED

The IARU Region 3 Amateur Radio Direction Finding Championships will be held Friday, November 28th to Wednesday, December 3rd in Ballarat Australia.

Ballarat is a large provincial city in the state of Victoria. The Victorian ARDF Group, which is organizing the event says that it is expecting up to 100 participants from member societies in IARU Region 3 including Japan, Korea, China, New Zealand, and Australia. Guest competitors from other IARU Regions are also invited to attend in the world-wide Friendship categories.

This years championships are hosted by the Wireless Institute of Australia, with the WIA Victorian Division sponsoring this important event. Full details including competitor and volunteer registration forms can be found in cyberspace at www.ardf.org.au (WIA)

**

AWARDS: WORK A COLORADO MOUNTAIN

Two new awards are now available for ham radio contacts to and from the 14,000-foot mountains of Colorado. The Summit Award is earned by making contact with 10 or more stations operating from the peaks. The companion Pinnacle Award recognizes operation from 14,000 foot summits, requiring radio operation from 5
or more of the peaks.

Award recipients will receive an attractive, colorful certificate with name, call sign and the number of peaks worked or activated on it. A $5 fee is required to cover the cost of the certificate and any associated expenses.

To get yours, first hold the QSO’s and then take your web browser to www.Colorado14erEvent.org. Questions should be directed to Paul Ermisch KB0LUR by e-mail to awards@colorado14erevent.org. And colorado14erevent is all one word. (K0NR)

**

DX

In DX, keep an ear open for GM3PPG stroke P to be active on 160 to 10 meter S-S-B from South Uist through August 8th, including the RSGB IOTA Contest on the 26th and 27th of July. The island counts as EU-010 for the RSGB Istands on the Air awards program. (GB2RS)

And R1PQ will be on the air from the Novaya Zemlya Archipelago through the 25th of July. Activity will be on 40, 20, 15 and 10 meters using CW, SSB, PSK and RTTY. The operation commemorates the British, Russian and American polar convoys between 1941 and 1944 and will have two stations active 24 hours a day. (GB2RS)

**

THAT FINAL ITEM: 73 TO THE W5YI REPORT

And finally this week we pause to bid farewell to a competitor and a friend. This, with word that the W5YI Report ham radio newsletter has ceased publication with it’s July 15th issue. Bill Pasternak, WA6ITF spoke with Fred Maia whose call sign appeared on the famed publication and they reminisced about the past:

--

The W5YI Report was the last of the paper ham radio newsletters delivered by the postal system. At one time there were three. The very first was H-R Report from Ham Radio magazine in 1974. It was eventually taken over by Burt Hicks, WB6MQV and renamed the Westlink Report. Hicks ran it for 13 years

before closing down in January of 1995.

The ARRL Letter came into being in 1981 as a public version of the previously private ARRL Directors Letter. It initially dealt only with matters of interest to League members, but over the years has developed into a high quality publication covering every aspect of the hobby with items of interest to members and non-members alike.

W5YI Report was started by Fred Maia, W5YI in the late 1970's. This, as an information provider to the Richardson Wireless Klub near Dallas Texas. Other hams who saw it asked Fred to make it available to them:

--
Audio only at www.arnewsline.org
--

Initially Fred did not charge for those who supplied him with self addressed stamped envelopes. Eventually his subscription list grew to a point where Fred had thousands of envelopes in his home and the numbers were getting out of hand. So he decided to simplify matters by converting to a paid subscription operation.

--
Audio only at www.arnewsline.org
--

And as soon as word got out that Fred was accepting subscriptions, they came pouring in. And the rest -- as they say -- is history.

In 2000, Fred sold his company that included the newsletter, but agreed to stay on for three more years with the W5YI Report. He set this summer for his departure. July 15th was the publication date he selected and that's now past:

--
Audio only at www.arnewsline.org
--

If you are a paid subscriber to the W5YI Report, fear not. Fred has you covered. He has arranged for the remainder of your subscription to be covered by C-Q Magazine based on the value of the remaining portion of your subscription. And if you already get C-Q, your subscription will be extended by the appropriate number of issues.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, with my longtime ham radio friend Fred Maia, W5YI.

--

And what about Fred? He is not going away by a long shot. To find out what he has planned for his own future and his thoughts on the future of ham radio, be sure to tune into this weeks RAIN Report. Its on-line in streaming audio right now at www.rainreport.com and on the phone at 847-827-7246

What I would do is to put your left foot in a bucket of salt water
before you drop the key down on the 300 watts... if that doesn't work,
then shave a spot on your head about 4 inches wide and put a small
salt water soaked sponge to the spot and drop the key again... that
should work great

1226. FRS/GMRS radios

Newsgroup: rec.radio.cb

I hope that this is the right newsgroup for posting this question. I wasn't sure where else to post it.

I am looking for a single FRS type radio to communicate with a group of people who already have a radio. They are using motorola talkabout radios, and I think the model number is t5620. I know that the model number doesn't matter, just as long as the radio that I get has the subchannels that they are using. It is my understanding that these radios require a license. I found a single motorola talkabout radio at Best Buy, but it has a 5-mile range capability. I ended up buying a 2-pair pack of the talkabouts that have a 2-mile range. If I return the 2 pair pack and get a single at the 5-mile range, will I need to apply for a license even if I am going to be communicating with someone at 2 or 3 mile range?

I am going to mount a 5' Firestik antenna to a hood mount on my 97 F250 HD.
I was reading the material from Firestik and they suggest mounting it on the
passenger side of the vehicle at least 12" from any other antenna. What are
the drawbacks if I mount it to the driver side? Are the drawbacks enough
that I should mount it to the passenger side?
Thanks.

The duals are a stupid idea. It is a waste of money. It only looks cool.

Bad reasons:
1) the two antennas need to be a quarter wave apart (8.5 feet)
2) you need a co-phase harness, two equal length pieces of 75 ohm coax
3) any length of 50 ohm coax will work to your splitter
4) you can never get the coveted 1:1 SWR in that setup.

Just get yourself a Wilson 1000 or something decent and be done with it.
You will thank me for that bit of info later.

GMRS requires a license. You won't notice much, if any, difference
with a 5 mile radio, the built in antenna is the limiting factor.

Get the two-pack, you'll have one to share.
A single two-way radio is no fun . >:

You may need to get a radio with PL or CTCSS (same thing). These are
subaudible tones that activate the squelch in their radios.

There are more trees to hit on the passenger side. My 7 foot KW-7 is mounted on the driver's side of the rear bumper. The 5/8 wave 2 meter is on the driver's side of the front. The dual band shorty for the scanner is on the passenger side. (got hooked to the HT the other night for a 440 test!!)

Now, where will I mount the 6 meter antenna. I might just put it in place of the CB antenna...so much DaveMade noise there anyway.

Message-ID: <3f18782a_4@newsfeed>
Source record: 162818

Recently a friend gave me a Commander 350 HD Class AB Linear Amplifier.
Supposedly it's a 350 watt amp, which seems like an awful lot.
I'm interested in knowing if it is only suitable for CB or for other ham frequencies (I am a licenced ham).
I haven't been able to find any specs or much info on it at all on the Web.
Would anyone have a manual available or any info about this unit?
I would appriciate it.

Scott has a pretty good reply to your query. The dual antennas can be useful if you are driving an 18-wheeler simply because that huge mass of metal (the trailer) will block your signal if you don't fill it in from the other side. If you aren't driving a large truck, you likely won't see any improvement using dual antennas.

There have been a lot of flames concerning coax lengths. The reality of the situation is this - a length of coax other than multiples of 1/2 wavelength can act as impedance transformers. If you are feeding into a 50 ohm non-reactive (pure resistance) load, coax length won't matter. Should the antenna *not* be 50 ohms pure resistance, then coax length may be able to reduce your SWR. The preference would be to have a good ground and be able to tune the antenna to 50 ohms non-reactive. That said, I'll guarantee that more than a few folks have improved their SWR by trimming coax. Not my first choice, but it may be the only way to get it close to 1 to 1 (grounding, adjacent metal may leave you with something other that 50 ohms; you may be able to get reactance out, but if it isn't 50 ohms, coax length may affect the SWR.

Sorry if I wasn't more helpful

Charlie,

Scott has an excellent reply. I'd like to point out that any handheld radio will start running out of steam at 5 or 6 miles. This is due to the lack of height of the transmitting antenna. As you know, a lot of folks put base station antennas up on towers. The reason being is that it gets the signal up away from nearby objects and also increases their distance to what is called 'radio horizon'. Radio horizon is the distance over flat ground (or water) from the transmitting (receiving) antenna to the point where the radio wave hits the ground/water due to the curvature of the earth. A simple formula to figure your range is take the height of the antenna from the ground (on an HT, 5 feet would likely be good as you're holding it up to your face) in feet (5 in this example). Double that number (10) and then take the square root (a bit over 3). That is the range of the radio to radio horizon. This will give you a bit over 3 miles. Now, as long as a second station's radio horizon overlaps or touches yours, you will have communications (assuming no big obstruction between you). The other station will have a bit over 3 miles. Added together, that means 6 miles is likely the limit (unless you climb a tree or something like that :)

FRS is a bit more limited, but the batteries will last longer at lower power and the difference isn't going to be large under any normal circumstances.

True.
I like the gain claims on some of the 1 foot mag mounts.

>>Digital speech processor?
>>I have details of his "DSP" - Dynamic Speech Processor, which makes claims
>>about a 90% average... so seems to be what is being referring to above.
>
>I'm sure it was just an honest mistake.

Yes, I was just unsure if the OP was referring to the same thing, or if Lou
had also made some other speech processor.

>Look again -- the first stage is a mic preamp with no input impedance
> matching
>(IOW, it has a very high input impedance and probably picks up a lot of
> hash).
>The second stage has variable gain, which is how he adjusts the clipping
> level.
>It would be much easier to eliminate that stage completely, and adjust the
>clipping by varying the voltage on the tail of the clipper.

From the info I have (dated 1992 on the document), the first stage is a
buffer and impedance matching. The gain is set at unity by the resistors.

<quote>
Since RL-1 and RL-2 are equal A1 has no gain at all, and simply operates as
a buffer.
</quote>

He also gives the option of changing the resistors, if using a crystal
microphone... but the pair suggested are both 47K, to keep it as a buffer.

The gain of the following stages is also set by their resistors, although
you can adjust the drive to the amp stage. With the adjustment, he seems
to suggest an overall gain of 60 but, if incorrectly adjusted (very likely),
the gain could be much higher.

>Hmmm... "a loud whistle"... gee, wouldn't it be great if all technical
>specifications could be that simple...

The person doing the fitting and adjustment is not expected to have the correct equipment or the knowledge... so he suggests a loud whistle and someone listening to your signal.

It would be better if he made it clear that, to fit the device, you must have
the correct equipment to benefit from it... but how many would he sell then?

>Sure, just switch the first stage to low-gain, and turn down the clipper
>adjustment (the gain of the second stage). But that defeats the purpose
> of the circuit.

The whole idea of adjusting it without the correct equipment defeats the purpose... and any "90%" claims.

>A dual-trace scope would be nice, and an audio signal generator would help.

I would say that a 'scope and signal generator are a minimum requirement for setting up the DSP. Although CBers are led to believe that a screwdriver and a mouth are enough.

>I never found the temperature grade to be critical. Those are the
> guaranteed specs, but even in extreme conditions most commercial
> grade chips will still work fine.

I have had a trucker bring a radio in for repair because it "does not work in the mornings". It will depend upon where you are, we do have some cold winters here... but I know that there are much colder places.

In the home, office, factory, etc, things may be fine - but CBs may be used in a vehicle and may be left in that vehicle overnight or longer - in cold conditions. The Automotive spec 2902 seems to be used quite often in CBs.

The R&D tech at a company I worked for had designed one of their products using a component above it's "guaranteed" spec. In the tests, all of the boards worked to spec.
Once in production, the next batch of components caused about 50% of the boards to fail on test.
It's never a good idea to design a product using components on the edge of, or beyond their guaranteed spec.

>>Unless someone has seen a statement claiming that his product does that
>>"90%", or that the "90%" can be done without unacceptable distortion or
>>harmonic content... then it is nothing but sales bumf- careful wording.
>>Also, it says, "about 90%".
>
>Nice catch!

A good salesman will, first of all, try to make a flaw look like a feature. Failing that, he will mask any bad points and make the spec look good with careful wording.
In the UK, Estate Agents are known for this. A tiny, cramped, one bedroom flat with no storage space is described as "no wasted space".

Boasting of what is possible, without saying whether your product will manage it, without problems is a great trick. As long as you only say that it is "possible".
People should be aware of wording and should not assume that "it is possible" means that the product will do it when they use it.

>There are WAY too many variables to make
>such a broad statement like "15dB of clipping is quite acceptable".

Ah, but what does "quite acceptable" mean... clear, a bit sh*tty... or almost intelligable.

It all seems to be carefully worded, ambiguous statements. I do not see an absolute spec anywhere on the sheets I have.

>>Certainly with clipping, but how about a VOGAD?
>
>Some of us old farts still call that AGC.

And why not... that's all it is.
I suppose that it can be useful to have names that distinguish one type of circuit from another. AGC could refer to any type of gain control, but VOGAD is specific. A radio could have AGC on the output, AGC on the receiver (as Cybernet have used) and AGC on the TX audio (as one or two UK CBs had).

>>If it is set to reasonable attack and decay times, there should be no
>>problem. However, the time delay means that it would not work the same as
>>clipping.
>
>Which is better because you don't have all the harmonics. But the use
> of both is best, since a clipper will catch any fast-rising signals that
> slip past the AGC.

I have a design here for one that uses both.

It really is good to have a civilised tech discussion.

Message-ID: <3F19FFB1.A8C9090B@cwis.net>
Source record: 162823

Jim,
In your example about range, the range wouldn't
be 6 miles, it would 3 miles. The radius of the
coverage area has to overlap the transmitter/receiver.
So, if two radios each have a range of 3 miles that
does not mean the total range between radios is 6 miles.
'Doc

In his example the range is limited by the curvature of the earth. That means if a person's eyes are five feet above the earth he can see the feet of someone three miles away, but he can also see the eyes of someone six miles away peeking over the horizon. So if the radios will talk line-of-sight, the range between them is six miles when they are both held five feet above the ground.

>feel more like a HAM.

I was at a seminar today from 7:30am to 4:30pm. All through the morning there was a fat asshole in the back row that talked way too loud for the room, sounded like Bill Murry in Caddyshack, and felt the need to share the life story of both him and his messed-up family. We broke for lunch, and after eating I strolled out into the parking lot for a smoke. That's when I saw that middle-aged retard cornering two barely-legal girls and bragging about how he walks on cell-phones and televisions with his 1400 watt CB mobile. The girls made an excuse to leave and almost ran away. What a perfect example of a keyclown.

>Thanks for the wisdom guys.... I'm gonna go to McDonalds now to

Sorry, Doc. Frank's reply is exactly correct. As long as the two radio horizons touch or intersect, communications will be established (assuming, of course, that the receivers work properly, the transmitters work properly, and the antennas work properly). My former neighbor now lives in Wellsville, some 80 miles away (110 or so by car) and can hear me just fine on the local repeater. Her elevation is around 2200 feet, which translates to a radio horizon of roughly 66 miles. One has to add the radio range of the repeater (which, incidentally, is located in the *opposite* direction from her) - the elevation is something like 500 feet (31 miles to radio horizon).

I didn't get 'Sparky's post, but...

Sparky,
You're right, and you're wrong. Besides the curvature of
the earth you also have to remember that the output power of
the transmitter also controls the distance at which the signal
can be heard. The signal has to have a certain minimum strength
to be heard at all. At UHF, 'line of sight' isn't the only
range limitation, but it is one of them...
'Doc

Jim,
So, are you saying that range is unlimited at UHF as
long as it's 'line of sight'?
Assuming that the transmitter's output for both radios
are the same, and both receiver's sensitivity is the same,
and both have a usable range of 3 miles. That means for
the two stations to hear each other they have to be within
three miles of each other. At 6 miles neither will be able
to hear the other because they would both be out of each
other's usable range. Wouldn't matter what the 'line of
sight' distance was. Propagation will make a difference,
but we're talking about the 'normal', every day state of
propagation.

Jim;
You stated that the limit of the handheld is 3 miles. Thats the
effective transmit range. You would have be within that radius with a
"normal" receiver to hear it. If you took another indentical handheld
just under six miles away, so their radius's of transmission would
overlap. Our "normal" receiver placed in the overlap could hear both
of them. The two a six miles would not be able to hear each other.
Height of above ground doesn't matter at this point, because you fixed
the effective range of each to 3 miles.

Illegal inbetweens. Using them causes splatter to those on legal
channels.

> > Here is a link to a frequency table which includes the Pro Star 400.
> > http://cbshop.webtrix.net/freq-chart-master.htm

No mention of where it's legal to transmit in this chart. Above 28 mhz
is a ham band.

First let me say hello to all my old friends on the group and tell you I still mourn the loss of a very dear friend that used to grace the pages of this group...those of you that know me will remember.
The receive is deteriorating in my 2950 and I will probably need to replace the amplifier stage of the receive side...where can I obtain the parts or who besides the factory is a competent 2950 tech. that has access to the repair parts.
Just to save the people that can't read any trouble typing let me say that I am not suffering F.E.O. (Front End Overload), the scotchy diodes are not blown.
Only the very strong signals are making their way in to the receiver and the RF gain is turned up higher than usual.
The problem is in the radio so don't waste your time inquiring about S.W.R. or Coax or Antenna placement....i hate to be so anal retentive but my experience with this board indicates a low level of comprehension after reading a post.
Thanx for your help and Keep on Truckin

Reading Lou's pages, one gets the impression that CB consists of two
things: modifying radios to go out of band, and operating rf power
amps.

If it doesn't not have any harmonic filters in it then don't use it on the Ham bands. You'll create allot of harmonics that will have you transmitting on the frequency you intended and others you didn't.

With a name like Commander 350, it sounds like just an 10M amp.

Regards,
Robert VE3RPF

Source record: 162852

I found a very funky AMC am and CB combo unit in a thrift store. Long story short, it works on am, but the TX is only two watts. The audio is as clear as a bell, but only 2 watts out.

Does anyone have any ideas what is the cause??? should I replace the final (and the predriver)

Where would I begin to look for a schematic for this old girl!!!!!!

Thanks in advance.

Bob

Whatsamatter? Upset that I'm not wasting my time with you any more? Or
are you just tired of Frank, George, Aaron, or whoever else is "playing"
with you at this moment?

I've been quiet, and I'll remain so, as long as this bickering remains
the norm. I've presented all of my evidence, there's no point in
rehashing it any further. But this post does underscore your continued
obsession with me, and of those who have truly figured out your various
psychological and anti-social afflictions.

Yuck! Why not just get a used Icom 706? They can be had for $400 or
less, and they are much better designed and built than an RCI (glorified
CB).

I take offense to the "holer than thou" attitude displayed by many hams
toward Cbers. They flaunt their "superior equipment" and tell the CBers,
to get ham licenses, and then are the first to complain to their ham
buddies, that the reason the ham bands are going to pot, is because of
all the CBers that are moving up there.
Ham radio and CB radio are both communications services. Both offer
their respective users with a forum for enjoyment. Each service has it's
own unique appeal that is not duplicated on the other. Ham radio is full
of serious discussions and one can learn alot from just listening. On
the other hand though, a constant diet of technobabble gets VERY boring
fairly quickly. CBers are less technical, and as a result, are more like
talking to "regular" people. Topics are more varied, and you can "fool
around" without fear of upsetting the "kilocycle kops", and have more
fun.

You're correct, Train. I should have clarified, "Remember when certain
people were cool before they became hypocritical hammie cops?"

Betcha Davie smokes Virginia Slims.

_
>Whatsamatter?

Nothing....I sit here quietly as you toss pseudoanonymous pebbles from
the dark and claim otherwise.

>Upset that I'm not wasting my time with you

>any more?

But, Davie, you have been breaking your neck going out of your way to
harass..,,you're merely yellow and for some odd reason, lie about
it,,but if you wish, I can lay your lies end to end, davie,,including
your claim of "always accessing the group in the same manner, except for
one other time".

> Or are you just tired of Frank, George, Aaron,
>or whoever else is "playing" with you at this

>moment?

You're angry, Davie,you lost more accesses, Davie. Note the amount of postings,,way down,,,the number of posting always directly corelate to the muli-posters necks getting stepped on..LOL. Your mail2news account was slammed for your inability to follow the rules,,,,instantly, the number of posts were cut in half,,and who bitches? You and Geogre and Frankie-lite stein...LOL.

>I've been quiet,

HAhhahahahhahahhahahahahahhahahahhahahahahahaahahahaahhahahahhahahahhahahaha! No, Davie, you haven't been quiet and you will get no believers on your word,,as you have been a proven hypocrite, and worse, a liar.

>and I'll remain so, as long as this bickering

>remains the norm. I've presented all of my

>evidence, there's no point in rehashing it any

>further.

Yet, here you are attempting to "present" your (hyuk) evidence...only your posts need no presentation Davie,,,,the self-contradictions and playing both sides of the fence illustrate your agaenda.

>But this post does underscore your continued

>obsession with me, and of those who have

>truly figured out your various psychological

>and anti-social afflictions.

>Dave

>"Sandbagger"

_
You feel MY posts underscore others who have "figured out various afflictions? LOL..Poor chap. ALways worried about that of which you are impotent. Go back to telling us how quiet you have been,perhaps your chosen friends of Frankie and Geogre and N8 will believe you, as no one else will,,,you're a hypocritical lying lid...LOL!
